Balham High Road (3/Nov/2000)

Certainty level: 60%

On 3 November 2000, I had just got off the bus in Balham High Road, when I heard a group of schoolgirls shouting and laughing. One of them yelled;

"He's an idiot you know."

You can hear this on the above clip; it is followed by laughter. I am not quite sure this is about me, which is why I have only given it a two in three probability. I have been attacked many times with the word "idiot", which seems to be a favourite with intellectual lightweights who want to bring down bigger game. (Back in 1992 I was so worried by the attacks on my intelligence that I took the test and joined Mensa...... does that make me a *clever* idiot? Never mind.)

Crescent Grove, Clapham Common (2/Dec/2000)

Certainty level: 100%

This is one of those clips where I am absolutely, 100% certain it's inflicted by MI5 on me, because of background, context. On Saturday 2 December 2000, I was walking from my home to a pub on Clapham Common, and on the way was in proximity to a group of three English youths who were walking the other way. They turned from the main road into a private estate called Crescent Grove. Here is what they said;

(first youth) "He masturbates!"
(his mate responds) "Yeah, he masturbates!"
(and again) "Thief!"

There is a lot of context associated with this incident, which I will now relate.

Firstly, the verbal sexual abuse is a popular one with MI5, and as a statement about me is currently mostly in their imaginations. The accusation has to be seen relative to MI5's persecutory actions in late November and early December 2000, and in fact for some months leading up to this. Their relevant activities in June 2000 are documented in a message in this evidence item; following from that, they sent someone to simulate an act in front of my window, which was captured on film.

It is the publication of the video of their agent performing the act on himself which caused MI5 to restart this thread of harassment in the first few days of December 2000. But there are some subtleties; I uploaded the digitised video to this website on 26/November/2000; but I did not announce its existence on the newsgroups until Sunday 3/December/2000. These youths' slur was made the previous day, on Saturday 2/Dec. That tells us quite a lot. According to my website logs, there were no accesses to the video file before Sunday 3/Dec. So why did MI5 restart this particular thread of abuse, before their agent's activities were published on the newsgroup? The conclusion we reach is that they were watching my internet connection, either decoding the telephone line, or at the ISP; and/or they may be able to physically see what is on my notebook computer's screen, from RF transmissions from its VGA circuitry. I do not know whether the latter is technically feasible, but the former certainly is, and I have known for years that MI5 bugs my internet activities and phone calls. It is from their observation of my internet connection that they were able to tell, without accessing the video file over the net, that it was of their agent in a compromising position; and it was from that observation that their shouted slur on 2/Dec emanates.

The second accusation, "Thief!", is even more interesting. It relates to occurrences from June of 2000, some six months before these youths threw the word at me. It shows just how wide in reach geographically and temporally the MI5 persecution is; they react to something which happened half a year previously.

In the first half of 2000, MI5 made a determined assault on my friendships. In one particular case, that of A. whom I had known for virtually all my life, they partly succeeded. This person made pointed references to me which made it clear he knew what was happening; at one point he started asking "do you know anything about the FBI and the CIA". In June 2000, we went to see a film in the West End. I paid for both of us, and then asked him to return what I had paid for his ticket, some �7.50. He was reluctant to do so. Eventually he returned �5, settling for the lesser gain of �2.50.

I did not call him a thief to his face, but I may have spoken the word while I was at home, either conscious or in my sleep. MI5 have very tight control over everything I do and say in my home through their bugs; if I say anything against someone in "their" camp, they turn round the accusation against me. So, from the fact that A. tried to garner a few pounds at my expense, MI5 create the accusation, six months later..... "thief!".

Virgin Radio-Jon Holmes (4-5/Jan/2002)

Here are two segments from Virgin FM, one on Friday, the other on Saturday, both from the Jon Holmes evening show.

Certainty level: 80%

In early January 2002 I listened for the first time in some months to Virgin Radio, specifically to the Jon Holmes evening show on Friday 4 January 2002. They promptly attacked me verbally. Again, context is relevant. There are three instances in the space of two minutes on this extract;

00:18 "are you lying?"

00:22 "it's not fair"
01:24 "everyone at the amateur c+ turbo programmers club found it hilarious"

The first phrase is a straight slander. MI5 were trying to portray me as a liar at around this time; I have other audio with the same accusation. "are you lying?"; unsophisticated.

It's closely followed by the words "it's not fair". Note carefully the way he says it,
quickly, as if to deny what he says. The phrase "not fair" was first created by OCTS MD
H S.-W. in Nov/1992, and picked up on my first visit to hospital soon after
"they should have paid your fare").
Again, unsophisticated parrotting of a key phrase.

The third phrase is explicable through contemporaneous context. That morning I had phoned about a C++ course. "c+ turbo programmers club"... again, somewhat brazen we're-listening-to-what-he-says-on-the-phone, and he-can't-prove-it. Something got lost
in translation from MI5's watchers to Virgin, because "c+ turbo" means nothing.... there
is no C+ turbo language, only C++, of which Turbo C++ is one implementation.

Certainty level: 80%

I wasn't entirely convinced from Friday's programme, but the following evening's show confirmed it. It contained a number of references to my condition, of which the
following excerpt is one such;

00:09 "I'm not well, and no-one cares"
00:24 "my voice sounds all funny"
01:01 "do you mean people that aren't mad"
01:05 "medical problem is it"

"I'm not well" doesn't mean he has a cold; it means he is being sarcastic about my mental illness. "my voice sounds all funny" refers to the change in nature of my voice when acute illness hits. "do you mean people that aren't mad" is obvious. "medical problem is it"..... rubbing salt into the wound.

Balham Hill Post Office (14/Nov/2002)

Certainty level: 80%

By mid-November 2002 the persecution had again dwindled, as happens sometimes, when along came this item.
I spent most of my time at home, going occasionally to the shops in Clapham South, or into town to meet people. On this particular
Thursday I only left the house once, for less than fifteen minutes to post a letter (special delivery, because my ordinary and
recorded delivery letters had been disappearing en route for some time - not that anyone would accuse MI5 of such petty harassment).
At the post office counter there was an Asian guy talking into his mobile phone and grinning away. There is a probability that
his comments were directed at me, as I will explain further. The second segment of audio closely follows the first segment.

"you'll do it today? let's meet about 3 o'clock and have some lunch. I got stuff to do and I'll go to the bank,
get this sh.. fucking moving yeah. Even just a little bit do something. He doesn't understand, you know what it is,
I don't want to tell him again cause then he might, he thinks we're having a go at him, I'm not having a go at him,
I'm explain to him"

Explanation: The guy is talking about some bloke who is unnamed, however it might be interpreted as being in code about me.

"I'll go to the bank"... variously interpretable, either literally, or as sounds-like "wank" which has been a consistent theme in MI5's abuse. "get this shit fucking moving"... abuse... could be interpreted as MI5's criticism of my inertness. The state spends hundreds of thousands of pounds a year - they want to see some result, not just neutrality and ordinariness. "he doesn't understand"... MI5 claim I'm stupid... but the numbers and bits of paper prove otherwise, so perhaps what that is really about is their agents' subconscious perception of themselves.

"having a go at him"... sounds like they're having a go at me, doesn't it? You might take the audio at face value and assume it's about some other guy, but it's normal MI5 procedure to pretend to be talking about someone else, and make the content of the message very relevant to me, or their perception of me.

"for some reason it doesn't get into his head, I don't know why... he's lost it completely, hasn't he"

What reason is there for it not getting into his (my) head? Stupidity is implied. Also implied is that it does get into his head; we're intentionally causing him damage. He's lost it completely... for some time I have suffered from OCD... lost it completely is the persecutors' observation of my illness, which they see through the surveillance on my home, which they caused.

Eclipse pub in Balham (20/Dec/2002)

Certainty level: 70%

On Friday 20/December/2002 I went to Balham to do some shopping and eating. When I went into the Eclipse pub for a meal there were two girls already at the bar being server, I ordered and sat down near the window. They sat down at the opposite window seat, out of sight. After a few minutes they started screaming repetitively "section, section". They were reading something and were trying to pretend that they were just repeating from what they were reading, but in reality it was quite obvious they were talking about me, specifically to confinement under mental health.

As you can guess the behaviour of these unwise young things shows them to be from the underprivileged category which due to the natural laws of society is seldom seen in the better classes of restaurant - the McDonald's next door is their more usual habitat. My guess is that these two females were deliberately placed in the Eclipse with orders to be offensive to me personally. The alternative would be that no-one had ordered them and they were just being rude on their own account, but that is improbable, for two reasons; first, I was out of sight of them and one does not usually "pick on" a person one cannot see; secondly, there had that afternoon in Balham been other, less distinct incidents immediately preceding this, and it is inferable that MI5 were making quite a serious effort to create a physical incident, as they have done on numerous occasions previously. I give my interpretation a two in three chance of validity.

Barbican Library - 6/Feb/2003

Certainty level: 100%

Here's an item from early February 2003, at which time Security Service were re-igniting hostilities against me, a direct result of my appeal for a legal hearing against their organisation. On Thursday 6/Feb/2003 I went to the Barbican in central London with my mother to visit the library and have a meal. Security Service naturally knew about it because it had been mentioned the previous day in our house which is under constant surveillance on grounds of "National Security", so they may have been able to inform staff there to say something to me, as has been done elsewhere.
Two of the people at the Enquiries desk in the library obviously knew of my circumstances, I spoke to one of them who was very polite, and while I was waiting I heard the other speaking with a little less politeness, as recorded on this audio file. He said, "I spy", to start a game of guess what "I spy"; unsubtle, MI5 Spy. Then, at the 34 second mark on this clip he said;

"So obvious you couldn't even get that. I shall have to kill you. ha, ha, ha"

The words "I shall have to kill you" are interesting because such overt expression is rarely heard. Security Service wish me extinct.

Some years ago they were openly shouting "suicide" at me, so that is established. But there is an element of doublethink in their attitude; they use people's natural prejudice against mentally ill, who are popularly painted by media as being aggressive, to try to tinge the group's view of me and MI5's actions against me. The Security Service religion is that the country's enemies are deadly, and must therefore be extinguished. Hence, we must seize eagerly upon the disabled schizophrenic from Clapham, and throttle him, because who knows what'll happen if we don't.

There may be a subtle agenda of population control in what the Security Service have been doing in this country since 1990. In the current issue of 2600 Magazine (the Hacker quarterly, which I read from time to time) there is a quote from Hermann Goering on page 2; "the people can always be brought to the bidding of the leaders. All you have to do is tell them they are being attacked. It works the same in any country". 2600 printed the quote as a comment on the projected war against Iraq, which does not appear to pose any threat to the territory of those countries which wish to invade it. However the quote is somewhat relevant to my case, which is widely known about within Britain; the security service instructs all right thinking citizens to do MI5's bidding and band together against a common enemy, while at the same time there is a suggestion of "look what'll happen to you if you don't obey us".

Fanatic's Fare for the Common Man

Certainty level: 90%

The article reproduced below was penned by Bernard Levin for the Features section of the Times on 21 September 1991. To my mind, it described the situation at the time and in particular a recent meeting with a friend, during which I for the first time admitted to someone other than my GP that I had been subjected to a conspiracy of harassment over the previous year and a half.

There is a madman running loose about London, called David Campbell; I have no reason to believe that he is violent, but he should certainly be approached with caution. You may know him by the curious glitter in his eyes and a persistent trembling of his hands; if that does not suffice, you will find him attempting to thrust no fewer than 48 books into your arms, all hardbacks, with a promise that, if you should return to the same meeting-place next year, he will heave another 80 at you.

If, by now, the police have arrived and are keeping a close watch on him, you may feel sufficiently emboldened to examine the books. The jackets are a model of uncluttered typography, elegantly and simply laid out; there is an unobtrusive colophon of a rising sun, probably not picked at random. Gaining confidence - the lunatic is smiling by now, and the policemen, who know about such things, have significantly removed their helmets - you could do worse than take the jacket off the first book in the pile. The only word possible to describe the binding is sumptuous; real cloth in a glorious shade of dark green, with the title and author in black and gold on the spine.

Look at it more closely; your eyes do not deceive you - it truly does have real top-bands and tail-bands, in yellow, and, for good measure, a silk marker ribbon in a lighter green. The paper is cream-wove and acid-free, and the book is sewn, not glued.

Throughout the encounter, I should have mentioned, our loony has been chattering away, although what he is trying to say is almost impossible to understand; after a time, however, he becomes sufficiently coherent to make clear that he is trying to sell the books to you. Well, now, such quality in bookmaking today can only be for collectors' limited editions at a fearsome price - �30, �40, �50?

No, no, he says, the glitter more powerful than ever and the trembling of his hands rapidly spreading throughout his entire body; no, no - the books are priced variously at �7, �8 or �9, with the top price �12.

At this, the policemen understandably put their helmets back on; one of them draws his truncheon and the other can be heard summoning reinforcements on his walkie-talkie. The madman bursts into tears, and swears it is all true.

And it is.

David Campbell has acquired the entire rights to the whole of the Everyman's Library, which died a lingering and shameful death a decade or so ago, and he proposes to start it all over again - 48 volumes this September and 80 more next year, in editions I have described, at the prices specified. He proposes to launch his amazing venture simultaneously in Britain and the United States, with the massive firepower of Random Century at his back in this country, and the dashing cavalry of Knopf across the water, and no one who loves literature and courage will forbear to cheer.

At the time this article was written I had believed for some time that columnists in the Times and other journalists had been making references to my situation. Nothing unusual about this you may think, plenty of people have the same sort of ideas and obviously the papers aren't writing about them, so why should my beliefs not be as false as those of others?

What makes this article so extraordinary is that three or four days immediately preceding its publication, I had a meeting with a friend, during the course of which we discussed the media persecution, and in particular that by Times columnists. It seemed to me, reading the article by Levin in Saturday�s paper, that he was describing in some detail his "artist�s impression" of that meeting. Most telling are the final sentences, when he writes, "The madman bursts into tears, and swears it is all true. And it is." Although I did not "burst into tears" (he seems to be using a bit of poetic licence and exaggerating) I did try hard to convince my friend that it was all true; and I am able to concur with Mr Levin, because, of course, it is.

At the beginning of the piece Levin reveals a fear of being attacked by the "irrational" subject of his story, saying "I have no reason to believe that he is violent, but he should certainly be approached with caution". This goes back to the xenophobic propaganda of "defence" against a "threat" which was seen at the very beginning of the harassment. The impression of a "madman running loose" who needs to be controlled through an agency which assigns to itself the mantle of the "police" is also one which had been expressed elsewhere.

In the final paragraph of this extract, his reference to Everyman�s Library as having "died a lingering and shameful death a decade or so ago" shows clearly what sort of conclusion they wish to their campaign. They want a permanent solution, and as they are prevented from achieving that solution directly, they waste significant resources on methods which have been repeatedly shown to be ineffective for such a purpose.

Private Eye, 23 Oct 1992

Certainty level: 25%

I'm not really sure whether this cover was intended to get at me,
or whether it was re-interpreted after publication to be about me.
This issue of Private Eye came out in October 1992, by which time I had
been under severe continuous pressure at work and from the general
population in Oxford for many months. It had John Major saying to his
wife, "Come back, Norma!" under the title "Major's support lowest ever".

There's a story behind this. In late October I was in the local pub
(the Rose and Crown, nice traditional name eh) with two people from
work, Simon and Phil. Phil had with him a copy of the current Private

Eye. These are both "nice people" and on my side, I hasten to add. Simon pointed out the message on the magazine's cover to Phil, and asked "what do you think about that". Phil answered, "Well usually they [Private Eye] get it right". This exchange happened in front of me. Although I was ill at the time (this was before I'd started taking medicines) I hadn't read anything into the Eye cover until these guys pointed it out to me.

Sometime later, again in the same road, a student shouted to one of his friends, "so when are you COMING BACK?", again in front of me.

What I realised Phil thought it meant was a double-entendre, the "coming" referring to the act of ejaculation, the "back" referring to the human back-side. So in a play on words you get a person who is referred to as a back-side ejaculating. Charming.

Of course, Phil could have been wrong. Perhaps there was no such meaning intended by Private Eye. Perhaps he saw meaning which wasn't there. Perhaps the moon is made from green cheese. Who knows?

Victor Lewis-Smith

Certainty level: 10%

Victor Lewis-Smith has issued a denial through his webmaster
John Hayward-Warburton regarding this article; he says quite categorically
it's not written about me. I kind-of sort-of believe him, but I think
the conspiracy is so wide that the phrase "Eventually, I had to leave
because they were all trying to kill me" could have been intended to be
as if from any paranoid person, but could have been influenced by my
case in the particular. So the influence could have been sort-of
subconscious.

This article is from the Evening Standard of Thursday May 8, 1997.
It is titled "Goon, and best forgotten" and may be found on page 31.

I think VLS has written/produced stuff specifically about me in the past,
both in his Evening Standard column, one of which is reproduced below
(in another case, he was talking about computer hacking, and I think that
was directed at me), and a television programme in around late 1993
when he has a taxi driver who says "they're all trying to kill me guv"
and VLS responds "you're supposed to be quite intelligent aren't you".

However, his webmaster has issued a formal denial on his behalf, so it
is not for me to oppose what he has stated categorically.

Introduction to the Sent Faxes webpages

Between 1998 and April/2000 I sent some thirty articles on the subject of the MI5 Persecution to British politicians, media, legal and diplomatic entities in the UK. Of those articles 24 are reproduced on this part of the website. They were originally composed as Microsoft Word documents, and saved to HTML form for publication here. A few of them were slightly edited in format for readability.

You will see that these articles cover quite comprehensively what has been going on since 1990, there being quite a lot of material to cover, since it is a rare week that goes by without MI5 making some harassing or threatening action against me. "How could it be True?"... they use the mental illness which they induced in me as a ready explanation for my complaints. Who started it, why did it start, why it continues... these faxed articles provide examination in more depth of the treatment in the Frequently Asked Questions webpages.
The sheer meaninglessness of the Secret Police actions is highlighted; their operatives make their livelihoods by cynically exploiting the taxpayers, when in a more responsible country they would be looking at the inside of prison cells.

The validity of this observation is proven by their reaction to my several suggestions in the articles that I would cease sending faxes if MI5's agents (and it's always the same people doing the persecution) desisted from continually harassing me. A number of times, you will see in the faxed articles, I have suggested that we come to a "peace of mind agreement" where I cease complaining and they cease harassing. On one occasion, I wrote to Hugh S.-W., the director of OCTS where I was employed in 1992-94 and who is aware of the circumstances, asking that he intercede to bring this matter to a close, by initiating a meeting between myself and the persecutors to mutually settle our differences; he didn't reply, but MI5 did soon after - they said "This is what you wanted, wasn't it?, some sort of confrontation?". The reality is the people stalking me are not interested in any settlement; for them crime pays, and pays handsomely; moreover it is State-approved crime; the Police will never investigate or take action; it is corruption on an incredible level and scale, and it has gone on for over a decade.

You will see that the articles contain three elements; firstly, there are original written articles, many in the first half of 1999 when I was writing new articles every week and sending them by email and fax during the weekend; then there are "MI5 Persecution Update" articles, which list happenings recent to a particular transmission; and finally there is the "old faithful" Frequently Asked Questions article which was sent on a few occasions during the three year period. These articles generated a number of interesting responses from politicians and other recipients, many of which are documented in the "received faxes" area of these webpages.

I hope you enjoy reading these articles. I'm not as angry as these articles necessarily make out, only sometimes, usually soon after the persecutors have said something unpleasant at me; the purpose of putting lots of fire and ire into the mix is to try to chuck it into the public domain which might lead to MI5 being forced to curb their actions. Unfortunately that aim was not achieved, despite many, many thousands of faxes being sent. Also, if any policemen are reading this, then I'm (a bit) sorry about the rude things I said about "the Bill" in one or two of the articles; the police have never done me any harm (yet) by commission, only by omission of doing anything to investigate my complaints or treat them seriously.

Faxes Sent to British Diplomatic/Legal logs

During the 1998-2000 period my records indicate that I sent at least 3,642 faxes to diplomatic and legal offices
located in the British isles, of which 3,345 went via TPC's email-to-fax service and 297 were sent via fax-modem
direct from my computer. The actual figure is somewhat higher since, for most of this period, whenever a recipient
asked to be deleted from my mailing list, I totally wiped all entries including that from the logfile.

In the records "Y" indicates successful transmission from fax-modem, "N" indicates failed transmission from fax-modem.
"E" indicates an error occurred while transmitting via fax-modem and a fax may have been only partly transmitted.
"y" and "n" indicate success or failure via TPC.

In April 2000 I changed the method of operation by recording "R" when a recipient requested removal, rather than
wiping their details from my mailing list and records; and keeping "B" records for when TPC actioned a ban on a

recipient's fax-number, but the recipient did not write to ask me to cease faxing. The purpose of these changes
was to keep more accurate and complete records, but the intention was thwarted by the police complaint.

Faxes Sent to British Media logs

During the 1998-2000 period my records indicate that I sent at least 6,137 faxes to the British media, of which 5,775 went via TPC's email-to-fax service and 362 were sent via fax-modem direct from my computer. The actual figure is obviously higher since, for most of this period, whenever a recipient asked to be deleted from my mailing list, I totally wiped all entries including that from the logfile.

In the records "Y" indicates successful transmission from fax-modem, "N" indicates failed transmission from fax-modem. "E" indicates an error occurred while transmitting via fax-modem and a fax may have been only partly transmitted. "y" and "n" indicate success or failure via TPC.

In April 2000 I changed the method of operation by recording "R" when a recipient requested removal, rather than wiping their details from my mailing list and records; and keeping "B" records for when TPC actioned a ban on a recipient's fax-number, but the recipient did not write to ask me to cease faxing. The purpose of these changes was to keep more accurate and complete records, but the intention was thwarted by the police complaint. Also in April 2000, I added some further fax numbers to my media mailing list and records, which is why some of the faxnumbers below have only a single entry, and some indeed have none.

Faxes Sent to British Parliament logs

During the 1998-2000 period my records indicate that I sent at least 14,480 faxes to the British Parliament in Westminster, of which 9,138 went via TPC's email-to-fax service and 5,342 were sent via fax-modem direct from my computer. The actual figure is obviously much higher since, for most of this period, whenever a recipient asked to be deleted from my mailing list, I totally wiped all entries including that from the logfile.

In the records "Y" indicates successful transmission from fax-modem, "N" indicates failed transmission from fax-modem.
"E" indicates an error occurred while transmitting via fax-modem and a fax may have been only partly transmitted.
"y" and "n" indicate success or failure via TPC.

In April 2000 I changed the method of operation by recording "R" when a recipient requested removal, rather than wiping their details from my mailing list and records; and keeping "B" records for when TPC actioned a ban on a recipient's fax-number, but the recipient did not write to ask me to cease faxing. The purpose of these changes was to keep more accurate and complete records, but the intention was thwarted by the police complaint.

```

It's going to be a 1 Terahertz Super68000 Quantum Computer with unlimited colors, sprites, scrolling and high quality 3D gfx. It will be equipped with a modern storage crystal reader and 1Tbit/s hyperspeed internet.

I'll sell it for $199.

Stay tuned!!!

If you respond to this psycho don't let the post go to the newsgroup
abg.mampf

It's where he keeps score of responses to his nonsense. Sort of like serial
killers keep trophies.

Faxes Sent to British Parliament logs

During the 1998-2000 period my records indicate that I sent at least 14,480 faxes to the British Parliament
in Westminster, of which 9,138 went via TPC's email-to-fax service and 5,342 were sent via fax-modem direct from
my computer. The actual figure is obviously much higher since, for most of this period, whenever a recipient asked to
be deleted from my mailing list, I totally wiped all entries including that from the logfile.

In the records "Y" indicates successful transmission from fax-modem, "N" indicates failed transmission from fax-modem.
"E" indicates an error occurred while transmitting via fax-modem and a fax may have been only partly transmitted.
"y" and "n" indicate success or failure via TPC.

In April 2000 I changed the method of operation by recording "R" when a recipient requested removal, rather than wiping their details from my mailing list and records; and keeping "B" records for when TPC actioned a ban on a recipient's fax-number, but the recipient did not write to ask me to cease faxing. The purpose of these changes was to keep more accurate and complete records, but the intention was thwarted by the police complaint.

MI5 Persecution: How Could It Be True?

If you have the patience to read these articles you will be struck by how apparently fantastic the claims being put forward are. You may ask yourself why such seemingly nonsensical assertions are made. This matter has been discussed on the Internets UK-local newsgroups for three years now, and the denizens of the uk.misc newsgroup (the so-called "miscreants") have come up with a number of theories to explain these posts; it has been variously suggested that they are a troll (an artificial creation for the amusement of its author), that they are made by MI5 themselves with the purpose of discrediting other conspiracy theories, and that the poster is mentally ill and the articles are symptomatic of the illness (the view held by most miscreants).

Are these claims the product of mental illness, or is that just a cover?

The most obvious explanation, that the claims made result from the admitted mental illness of the author, is the one which the persecutors intend be the one accepted without consideration being given to the possibility of the claims being true. The persecutors have actually been very clever about this, both in selecting as their target someone who was known from school or university as being borderline schizophrenic, and in ensuring the nature of their persecution corresponds to what often features in the delusions of a schizophrenic.

The very first incident of the persecution occurred in June 1990, when I was still a student at university in London. It consisted of a reaction (giggling) from the newsreader, Sue Carpenter of ITN, to what she saw happening in my living-room at my parents home where I was living. Before your imagination gets the better of you I should make clear that what the newsreader was reacting to was not too embarrassing in nature; my mother had brought an apple for me into the the room, and Sue Carpenter found this amusing.

I recognized that Carpenter had reacted to what she had seen in my living-room, yet this idea still seemed completely fantastic to me. My reaction was to continue watching television, particularly the news, to see if this incident would be repeated. It was, many times, both on BBC and ITV. An intelligent person would have thought to obtain a video recorder and capture some of these incidents in order to try to explain to an observer what he saw in these broadcasts. Unfortunately, I failed this test of intelligence, since I did not record these programmes. I have recently attempted to obtain from ITN tapes of their news programmes dating back to summer 1990, but, unhappily, they have advised me that they do not have complete programmes including newsreaders comments dating back to that period.

From the outset, the persecutors structured their actions to ensure that any complaint would be met with disbelief, and dismissed as delusional. This is why they chose as their target someone who was known at school and university to be borderline mentally ill; and it is why they fired the first shots of their campaign through the broadcast media. Schizophrenics commonly believe the media harass them; it would be exceptional for "full-duplex television" to exist in reality. Those with schizophrenia also commonly believe people are talking about them; again, the persecutors have shown themselves very rarely, but act through intermediaries, both in the workplace, and in public and during travel.

Mental illness is not the cause of these claims, but the simulation of its symptoms is a cover used by the persecutors to deny their victim the ability to have his compaints believed.

What evidence exists to support these claims of "interactive television/radio";?

Quite frankly, I have very little evidence to support my claims. You may examine the "Evidence" area of my website to see such evidence as I have been able to gather. None of it is remotely conclusive. The "smoking guns" all date back to 1990/91, and it is really rather late now to start trying to look for material dating back seven or eight years. In 1997 I started tape-recording every programme I watched or listened to. I also started carrying with me a high-fidelity minidisc-recorder with good quality microphone to catch incidents of public harassment, but this also has not been as successful or conclusive as I had hoped.

Perhaps the best item in the "Evidence" section is the audio file "Life is so hard" (it is labelled with Garfield the cartoon character on the site), which I have given a certainty level of 100%. This item relates to harassment at my workplace in Canada in 1996. A co-worker called Mark was coming up with phrases and expressions which were repeating things being said at my Canadian residence, consequently leading me to believe that my apartment and home phone were bugged, and that the persecutors were passing their gathered information on to Mark. On one particular evening I said in my apartment, "life is so hard, and then you die". The following day I was able to record Mark saying exactly the same phrase at work.

Unfortunately when "they" know you are recording them, they simply dont say things which would unambiguously show harassment. When Mark the co-worker knew he was being recorded, he only made his remarks out of range of the recorder, for example outside the building. When the TV newscasters or radio disc jockeys know they are being taped, they limit themselves to saying things which are ambiguous, which even in my mind may or may not be personally directed against me.

Who knows about this persecution?

Surprisingly many people know. People in the media, such as BBC and ITN newscasters including Martyn Lewis and Michael Buerk, and radio disc jockeys such as Chris Tarrant of Capital Radio, know what is going on, and take part in it. Some co-workers at my former workplaces in England and Canada have known about the harassment. Quite a few people in the general public are also included. I believe the police are aware of the persecution, but, unfortunately, have chosen not to take any action to stop it. I have complained at my local police station in London several years ago, and I have stated on the internet newsgroups that I have done so, hence the police will be well aware of my wish to see the matter resolved. I believe their inaction denotes a dereliction of duty, but without good evidence, I am powerless to compel them to take steps to prevent further harassment, or deal with what has already taken place.

What is the purpose of sending these faxes?

These faxes are being sent to three distinct groups of people, namely Members of Parliament, the media, and diplomats & legal people. As you will have observed I am making use of the email-to-fax gateway at Demon Internet to send these faxes. I am forced to use this gateway since I currently live in North America, and cannot afford the high cost of direct phone calls to the UK.

My purpose in publicising my claims is firstly to discourage the persecutors from continuing their campaign, and also to attempt to bring their campaign out into the open, and thus perhaps identify the persecutors. Neither aim has been achieved yet, but I hope that with sufficient stimulation these aims may yet be accomplished.

The problem with the second aim is that those who read this article will fall into two groups, those who dont know anything about the persecution and consequently will disbelieve my claims as delusional, and those who do know about the harassment and may have some idea of who is behind it, but realise that if the harassers are exposed and the truth brought out into the open, then powerful British institutions will substantially lose prestige, and be exposed to ridicule.

It would give me hope to believe that these faxes will create a third group of people, those who find out that I am telling the truth, and who follow their consciences in standing up and seeing justice done. Only time will tell if this hope will be realized.

Why do you think MI5 are responsible?

The question of who is ultimately responsible for this eight-year harassment is one which is very difficult to answer, as the persecutors have never clearly made their identities known to the persecutee. However, I believe I am correct in attributing the continuing victimisation to elements of the British Security Service MI5, and in this article, I will try to explain the reasons for this belief.

The British internet magazine ".net" featured my website on page 17 of their March 1998 issue (number 42). Their review kindly describes it as an "excellent site" and gives some details of what the net surfer will find there. Should you wish to reply to this article you can do so;

"When did you first suspect MI5 were responsible?"

Over Easter 1995 I went to see a local solicitor in London with a view to talking to the police about the harassment. Soon afterwards I did go to my local police station in Clapham and spoke to an officer there. The solicitor made a comment which suggested to me that the persecution I had been experiencing may have been organised by an intelligence service.

Up to this point, I did not have any clear idea as to who was behind the harassment. Only their agents were visible, in the media, on television news programmes, and on the radio; in the workplace, where things said at my home were repeated verbatim; and in some cases abuse in public and during travel, for example on the trip to Poland in June 1992 which I have already described.

Both from the fact that widely disparate individuals and organisations were employed as agents in the campaign against me, and from the fact that an entity would be required to marshal their resources in the areas of spying on my home and giving gathered information to their agents, it was clear to me that a single entity was responsible for carrying out the campaign. Yet from June 1990 until Easter 1995 I did not have a clear idea of who might be responsible. I guessed that perhaps some private individual or group of persons who saw themselves as my enemies had perhaps paid private detectives to organise the harassment. Alternatively, since the campaign had started in the media, I made a far-fetched supposition that perhaps it was an ad-hoc group of media people who had set themselves up in opposition to me. After Easter 1995 I saw that these guesses were wrong, and I made an I believe much more accurate estimate as to who my enemies really are.

"Why couldn't a private group be behind the persecution?"

There are several reasons why a private individual or group would not be behind this campaign.

Quantity of resources / Money. Here is what one Usenet (internet newsgroup) participant had to say (several years ago) on the topic of how much money it would cost just to keep the surveillance going.

PM: >But why? And why you? Do you realize how much it would cost to keep
PM: >one person under continuous surveillance for five years? Think about
PM: >all the man/hours. Say they _just_ allocated a two man team and a
PM: >supervisor. OK., Supervisor's salary, say, #30,000 a year. Two men,
PM: >#20,000 a year each. But they'd need to work in shifts -- so it would
PM: >be six men at #20,000 (which with on-costs would work out at more
like
PM: >#30,000 to the employer.)
PM: >
PM: >So, we're talking #30,000 x 6. #180,000. plus say, #40,000 for the
PM: >supervisor. #220,000. Then you've got the hardware involved. And
PM: >any transcription that needs doing. You don't think the 'Big Boss'
PM: >would listen to hours and hours of tapes, do you.
PM: >
PM: >So, all in all, you couldn't actually do the job for much less than
PM: >a quarter million a year. Over five years. What are you doing that
makes
PM: >it worth the while of the state to spend over one and a quarter
million
PM: >on you?

A private individual or group would not spend over a million pounds to verbally torture a victim without some financial motive or gain. Private industry is driven by the profit motive, and there is no financial profit to be had from carrying out a campaign in this way. If a private enterprise were behind it then they would have taken direct physical action a long time ago.

State enterprises, on the other hand, can afford to be wasteful, since they are funded by the taxpayer. They do not have to show a money profit. The employees or contractors employed by a state organisation such as MI5 are driven by their own personal profit motives, to make the most money out of their employers for the longest period of time. MI5 is funded to the tune of #150M p.a.; even a few hundred thousand a year would to them be affordable if their managers could convince themselves of the necessity of what they were doing.

Quality of resources / Technical resources - electronic and other surveillance. In summer 1994 a reputable and competent private detective agency was employed to conduct a counter-surveillance sweep of my home in London. They charged us over #400 for this, conducted a thorough search for radio transmitting devices, hard-wired "probe" microphones and also tested the telephone line. They found nothing. This was not altogether surprising, since it had been made very clear to me that there were bugs in my home; the "buggers" would not have made this clear unless they had felt their bugs were of sufficient sophistication as to be safe from detection.

But there is another lesson to be gained from the failure of the private detectives to find anything. The agency employed was one of the most reputable in London. They were employed on the principle of "setting a thief to catch a thief", for if the harassment were being carried out by private detectives, as I then believed, then surely another set of private detectives would be able to find the bugs that they had planted. That these "private eyes" were unable to find anything, and that the harassers were confident that they would not be able to find any bugs, points to the harassers being an order of sophistication above a private agency, and leads me again to believe that a state intelligence service is responsible for the surveillance and harassment.

Quality of resources / Technical resources - Interception of Postal service. In summer 1994 when I emigrated to Canada to try to escape the harassment, I wrote letters home to my family and friends in London. Quite soon after my arrival in Canada, the harassers were able to find precisely where I was staying. The only way I can see of "their" being able to find out my new address was by interception of my letters to the UK.

Later in 1994, I conducted an experiment to see if my letters home were indeed being read. In a letter home I wrote of being depressed and talked in vague terms of suicide. I deliberately chose this topic, since I believed it was the outcome my harassers were trying to achieve, and that if they read the letter, they would "echo" its contents. Sure enough, soon afterwards there were two incidents of people shouting "suicide" at me in public places in Canada.

It is inconceivable for a private agency to have the ability to intercept postal mail. The state security service on the other hand is well known to engage in these activities.

Quality of resources / Access to Media. One of the strangest aspects of this case is the access "they" have to the broadcast and print media. I still do not understand what could persuade newscasters such as Martyn Lewis and Michael Buerk, who consider themselves "gentlemen", to behave in an almost voyeuristic way by "peeking" into the living room of one of their viewers. A year ago I wrote to the BBC asking if these newscasters would confirm or deny the accusations made against them. The BBC replied that their newscasters had denied the accusations, but refused to do so in writing.

It is well known that MI5 have the ability to plant stories in certain newspapers, but convincing television newscasters to "watch" a viewer while they read the news would surely be very difficult for them to accomplish, unless they presented themselves to these journalists as being, for example, a group in the media who were seeing to it that I got my "deserved" treatment. MI5 has a history of manipulating the media, so it might not be too difficult for them to accomplish such a trick, whereas a private group would not have this ability.

"Have they ever denied that they are the Security Service?"

No. Never. This is in fact the main reason why I believe "they" are MI5 and not a privately funded group. If my guess had been wrong then I am sure that "they" would have crowed over my mistake, but they have never admitted nor denied that they are employees of MI5.

In early January 1996 I flew on a British Airways jet from London to Montreal; also present on the plane, about three or four rows behind me, were two young men, one of them fat and voluble, the other silent. It was quite clear that these two had been planted on the aircraft to "wind me up". The fat youth described the town in Poland where I had spent Christmas, and made some unpleasant personal slurs against me. Most interestingly, he said the words, "he doesnt know who we are".

Now I find this particular form of words very interesting, because while it is not a clear admission, it is only a half-hearted attempt at denial of my guess that "they" = "MI5". Had my guess been wrong, the fat youth would surely have said so more clearly.

"If MI5 were behind it, why would they wish to mask their involvement?"

I have heard a number of times a belief from people in the media that it is they, the media people, who are behind the abuse. In spring 1994 Chris Tarrant the Capital Radio D.J. said sarcastically on his breakfast show, "You know this bloke? he says were trying to kill him. We should be done for attempted manslaughter". We, we, we. Tarrant thought it was a media conspiracy.

Returning to the question of "interactive watching" by television newscasters, it would again be much easier for them to take part in that sort of activity if they convinced themselves that the surveillance and abuse were organised by "their own", by media people. It must be second nature to MI5 to mask their involvement in the matters they deal with; in this case, they pretend the campaign is organised by a group in the media, and any journalists who suspect otherwise keep their silence.

Conclusion

Over the last three years I have stated with some force my belief that MI5 are responsible for my misfortunes. I have done so on Internet newsgroups, in letters and faxes to people in politics and the media in the UK, and in 1997 I made a formal complaint to MI5 regarding their activities; the Security Service Tribunal replied in June 1997 that "no determination in your favour has been made on your complaint". (I believe the statement by the Security Service Tribunal can be disregarded, as they have never, ever made a ruling in favour of a complainant.) In three years of naming MI5 as my oppressor "they" have never denied the charge. To me, their silence on this point indicates that my guess was accurate. I believe my persecutors stand identified. The question of why they should carry out this campaign is one I will try to answer in a future article.

MI5 Persecution Update: Friday 15 May, 1998

The persecution has been quite severe for the last week. It appears that my enemies are reacting to the steady stream of faxes making their way over the Atlantic to the fax machines of Westminster politicians and the media. Here is whats happened in the last few days;

The week started off with an incident in the cafeteria at a local shopping centre where I habitually drink my morning coffee. My enemies have concentrated since winter 1995/96 on throwing a particularly horrible sexual slander against me. They "put people up" to repeat this slander against me, and this is what happened again here.

On Thursday morning (yesterday), instead of going to the usual cafeteria I went to a nearby convenience store for coffee. The same horrible sexual slander was shouted at me very loudly by a member of staff as I walked into the store. This was the first time I had ever bought morning coffee in that shop. The other staff obviously knew what was going on, one of them said, "they screwed up my life".

The fax gateway I use to send these faxes to the UK has been working hard these last few days to shut down my access by barring the accounts I use to send these faxes.

I have received an anonymous threat from fax number 0171-219-6101 (the machine gave its name as "ETRA-HoC") which said, "Stop sending to this fax no 0171-219-6101 or else" (the consequences of continued transmission were unspecified). I invited the sender to apologise for his threat, but received no response.

This all adds up to quite a severe reaction to my faxes of the last few weeks. I actually find this quite heartening since it shows that my faxes are finding the mark and there may yet be a breakthrough in my efforts to expose the Security Service conpiracy of abuse against me which has now been going on for eight years.

MI5 Persecution: "Why would they be doing this to you, sir?"

This article will concentrate on the difficult question of "Why". The question which forms the title of this piece was asked of me by the police officer I spoke to in Easter 1995, when I went to make my complaint.

There are really two sides to this question. Firstly, why should MI5 be harassing anybody in this fashion? Secondly, if they choose to behave in this way, why should they have selected me in particular, and not somebody else? Alternatively, why did the persecution start, and why is it continuing?

I do not have definite answers to either side of this question, since my persecutors have usually kept themselves hidden and only acted through other parties. To know "why", one would have to know who the persecutors are, and something of their personalities, since their abuse is almost certainly symptomatic of a personality disorder of the abusers. Certain things however can be deduced about the abusers from the nature of their behaviour, and I will talk about this later in the article.

Why did it start?

It is clear that the persecution must have been initiated by someone who knew me personally, either at school, or at university, or socially, and knew that I was borderline mentally ill, since this is what makes me a target for the persecutors. Unfortunately, the originators have never been identified, and there are several possible candidates. Neither has the link from the originators of the persecution, to the persecutors themselves, ever been made clear. So who are the originators?

University Staff

The identity of the originators may lie in the timing of the persecution. It started in June 1990, while I was finishing a course at Imperial College in London, and a year after I graduated from Cambridge, where I received a degree in computer science. At Cambridge I had achieved some notoriety in the computer lab from various nefarious exploits. Roger Needham attacked me by saying that "there were great hopes for it, but it failed terribly". When I started at Imperial I found that my reputation had preceded me; Cambridge computer lab had spoken to I.C. lecturers about me. I.C. lecturer Frank McCabe summed up commenting about "setting up a straw man so you can tear him down". (Despite being "torn down" by the Cambridge computer labs lecturers, I still achieved a good first degree and a Masters degree at Imperial.)

Other students at university

So, the originators may have been university staff who knew me from my student days. But there are other possibilities. I had other enemies at university, including some fellow students. At my Cambridge college it was common knowledge that my mental health was dubious, and it was known that I talked to myself in my sleep - the floor and walls were quite permeable to noise, so other students heard. I was given the nickname "gibber" because of this habit. Sometime later, I managed to catch myself talking in my sleep when I woke up in the middle of the night.

Here is a quote from a participant in the internet newsgroup where I have been posting for the last three years;

>One thing which has been missing from this discussion is this simple
>prognosis: that maybe he is right and that, despite his admitted
>mental condition, there really is a campaign against him organised by
>now-influential ex-students of his university.

People I knew socially

I had yet other enemies in 1990 (I am a man of many enemies!). In January 1990 I broke up with some people I had been going out with socially. One of them, by the name of Andy Turner, wrote a letter to Alan Freeman, who at the time was a Radio 1 DJ. Freeman read part of the letter out on his Rock Show, about the "one who wore out his welcome with random precision", saying "thats a hell of a letter you wrote there Andy", and "with a schizophrenic youre never alone".

It is my belief that Andy Turner and his friends were trying to make trouble for me, and Turner wrote to Freeman with this in mind. Freeman may have discussed the letter with others, and things may have snowballed from there. This is, of course, pure supposition. The fact is that I do not know who the originators are, and can only guess.

Once it started, why is it continuing?

The answer to this question is obvious. It is unacceptable to the "powers that be" in the UK to have somebody running around who knows he has been targeted by the Security Service and media organizations, and who is in a position to embarrass British institutions. This has become particularly evident in the last week; as I send more faxes to UK politicians and media, so the pressure on me grows, and the volume of abuse increases.

Part of the reason the persecution continues is in the personalities of the abusers, and it is this subject to which I will turn to next, since the key to understanding the persecution lies in understanding those who carry it out, as much as we can.

The Security Service operatives, the persecutors, are they psychopaths?

Let us first examine the definition of the term "psychopath". DSM-IV defines "anti-social personality disorder" as a "pattern of disregard for and violation of the rights of others ... deceitfulness, irritability and aggressiveness ... consistent irresponsibility and lack of remorse". The Harvard Mental Health Letter of Sept 1995 describes these people as using "charm, manipulation, intimidation and violence to control others and satisfy their own needs. Lacking in conscience and in feelings for others, they cold-bloodedly take what they want and do as they please", having "no guilt or regret".

I must say, reading this description of the condition, that it fits the persecutors perfectly. The persecutors have never shown the slightest remorse or guilt. Even when I was severely ill, they continued to abuse me. They have repeatedly blamed their actions on me, which is another trait common amongst psychopaths. They have no respect for my legal or personal rights, and they use intimidation and verbal violence.

If the MI5 operatives are psychopaths then it would explain both why the persecution started, and the degree of verbal violence. Psychopaths by definition damage other people; here, the MI5 operatives find an outlet for their personality disorder, through "cripple-kicking".

Xenophobia on the basis of mental illness, and race

My enemies have made clear many times that one of the reasons they are persecuting me is because of my admitted mental illness. However, it is my belief that they are also persecuting me because I am not of ethnic English origin, and the fact that there have been several incidents of an overtly racist nature reinforces this view.

In one case, two youths on a tube train in London made openly racist references to me as a "soft toy, not up to British Standards". Another person near my home made remarks about "Polish people". In yet another incident in Croydon, a youth made comments about "foreigners".

But the main thrust of their xenophobia is because of my mental illness. I should make clear that I do not look ill; if you met me, you would not know that I had the illness. I take a relatively low dose of medication, and feel quite well. But the persecutors have repeatedly harped on about my supposed serious mental illness; they have called me a "nutter", a "schizophrenic", etc. They have also persuaded other people to use these terms of abuse. They are able to get away with this because abusing the mentally ill is still something which is mostly acceptable in Britain; the media do it, "nutter" is not taboo in the way that "nigger" is.

Conclusion

There are several groups of people who might have wished to cause me trouble, and I still do not know who originated the persecution. Nor do I know how the originators came to be in contact with the (presumed) Security Service operatives who have been carrying out the campaign. To know conclusively why it started, we would have to know who started it, and this information is not available.

However, we can infer some things about the personalities of the persecutors from their methods, and from the degree of verbal violence they employ. It is clear that a main reason for the continuing harassment is the psychopathic disorder of the MI5 agents who carry it out. That they have never been "brought to book" for their misdeeds reinforces their belief that they do no wrong; and, unhappily, until they are brought to book, their persecution campaign looks set to continue.

MI5 Persecution: .net Magazine Applauds my Website

The March 1998 issue (number 42) of .net Magazine reviews the MI5 Persecution website describing it as an "excellent site". The webpages describe in detail the nature of my persecution since 1990 by what are believed to be elements of the UK security service.

(snip image)

You are encouraged to read the web pages which include

o a FAQ section outlining the nature of the persecutors, their methods of harassment through the media, people at work and among the general public
o an evidence section, which carries audio and video clips of media and workplace harassment, rated according to how directly I think they refer to me
o factual descriptions of the state security agencies involved
o scanned texts of the complaints I have made to media and state security agencies involved
o posts which have been made to netnews over the last three years on this topic

MI5 Persecution Update: Friday 13 November, 1998

If You Intend To Reply, Please Read This

If you have any questions or observations you would like to share with me, then you are very welcome to reply to my fax number 0171-681-1190. But please.... keep your response to one page if you can! I have had several people faxing my article back to me, including one MP faxing back twenty pages. I do not know if he had anything intelligent to say in his 20-page fax because I applied judicious use of the "Delete" key on my computer. Faxes over a page or two will be deleted without being read.

MI5 Resume Hostilities in Response to these Faxes

When I wrote last weeks "MI5 Persecution Update" I remarked how quiet my life had become. No longer! MI5 have restarted hostilities with a vengeance the past week, in response I believe to the faxes I have been sending to members of the House of Commons.

On Saturday 7 November I went to Clapham Picture House cinema to see the film "Antz" (a very enjoyable film). At the cinema, I was verbally assaulted by a group of teenagers with the words "still crazy", repeated about ten times. There was a film with that name showing at the cinema, but it was clear their abuse was directed at me. I do not look ill, so why would they pick on me? answer, the incident was set-up by the persecutors. One of the teenagers also said to another, "I don't know what we're laughing at".

The following day, Sunday 8/11/98, I was on my way to play squash when I was verbally assaulted by a youth who said "it was so funny", without the slightest trace of humour. What he meant by this phrase was that was funny, and they were trying to humiliate me. I have heard this phrase "it was so funny" used at me before many, many times over the last eight and half years.

Please Encourage Keith Hill MP to Help Me

I live in a bugged house, bugged both for audio and video. My movements are monitored by MI5. The Security Service have followed me to Canada, to Poland and the Continent, to the States. I cannot work anywhere, not in England, not in Canada, because MI5 will destroy whatever employment I am able to obtain. I have asked Keith Hill MP to help me, and he has refused.

The situation is intolerable. It is Mr Hills job to help me out of this mess. So, please, as I said in the last fax a week ago: Do not waste your time returning multiple copies of my faxes to my fax mailbox, as some of you have done. Instead;

Please encourage Keith Hill M.P. to help me.

I am sorry to be using this device to encourage Mr Hill to help, but I think eight and half years are quite enough and it is time something was done to bring this matter to a close.

MI5 Persecution : BBC Newscasters Spying on my Home

This week's topic is the quite extraordinary claim that BBC newscasters such as Martyn Lewis and Michael Buerk have spied on my living room while they read the news. I currently have an advert running for the next six months in Private Eye's "Eye Say" column (at a cost of over #200) which says,"MI5 Persecution - BBC Newscasters Spying on my Home"; the story of my campaign in the Eye is on my Website at; http://www.pair.com/spook/evidence/plaint/priveye.htm

BBCs staff magazine Ariel also ran my advert "BBC Newsreaders Spying on my home" for one issue in the Personal category on 8/July/1997 before it was spotted and axed by editor Robin Reynolds; please see webpage; http://www.pair.com/spook/evidence/plaint/ariel.htm

Beginnings

The very first incident in the "MI5/BBC Persecution" occurred in June of 1990, when a newsreader reacted to what she saw in my living room at home as she read the news. My mother had brought an apple for me into the room, whereupon the newsreader smirked and giggled, apparently finding this funny. I couldn't believe what I was seeing. I carried on watching news and other television programmes to see if presenters would show signs of "interactive watching"; to my surprise, this happened again and again. Unfortunately, I did not have my wits sufficiently about me to videotape these programmes, and it is now almost impossible to obtain recordings dating back to 1990.

Most of the "TV watching" has occurred on the news, and most of it in summer 1990, although some as late as autumn 1993. My website has a few extracts of what might be politicians "getting at" me, in particular John Major and interviewer Dimbleby sharing a joke about the "Knutsford Guardian" which is almost certainly about me.

I sold my portable TV in autumn 1990 and stopped watching television regularly. I realise now that this may have been a mistake. What I should have done was to watch TV and listen to the radio, but tape-record everything and make a note of what each excerpt meant to me. I would then be in a much stronger position as regards to evidence that I am now. That is what I am trying to do now, but unsurprisingly the TV/radio presenters have stopped getting at me, now they know they are being recorded.

Examples of Media Harassment

Here are a few examples which I can still remember of media harassment;

In early 1992 I was watching the BBC news with Martyn Lewis on a small black-and-white portable television at my then home in Oxford. I threw a term of abuse at Lewis; he flinched, then gave a grin and made a comment from which I understood that he had been on my side, but might have changed his mind as a result of what Id just said to him.

Victor Lewis Smith in his TV (BBC2?) program at the end of 1993, had a taxi-driver saying, "theyre all out to get me", to which VLS replied, "but you're quite intelligent aren't you?" (what a nice chap VLS is, compliments no less!)

Paul Daniels the TV magician, sometime in 1990-92 (sorry I can't be more precise but it was so long ago), made a "crying face" and put his face in his hands, which was his way of expressing that I was frequently crying in 1990-92, and that he and other media people found my crying funny.

Kenny Everett (deceased) on some talk show, compared me to a "huge ape" who "scratches himself"; he made some other remarks about what the "ape" got up to which unfortunately I cant remember. (I remember that Everetts comments were quite sympathetic and human, but were obviously about me.)

Stephen Fry on another talkshow (Wogan I think) talking about "masturbatory fantasies", he then referred to me with the words "you prat"; I wonder if the studio audience knew what he was talking about and to whom his comments were directed?

Griff Rhys Jones on Clive James' TV show, made a "lunatic face" (wide fixed grin) to which I said to the TV that he had a "face like a horse's arse", to which Clive James said to GRJ "did you hear that?"

Crimestoppers summer 1990, remarks by a Midlands police officer on the programme, while Nick Ross was presenter (as far as I can remember). The officer talked about "in car entertainment". Nick Ross said to officer, "why don't you stop doing it?" to which he replied, "we can't while he's like this".

BBC2 Newsnight in autumn 1993 had a piece on football hooliganism. A black interviewee said apparently of the hooligans, but in fact of me; "they're just idiots, carry on with the surveillance".

There was an incident with Jonathan Ross which I remember clearly; he was on both BBC and ITV television at the same time, one (ITV I think) was recorded, the other channel was live. Ross has a speech impediment which causes him to pronounce his "r"s as "w". I sarcastically said something about "Mr Woss" to the recorded channel, then turned over to where he was live, and he repeated "Woss" with heavy emphasis and sarcasm.

On the radio, in spring 1994, Chris Tarrant made a sarcastic remark in his morning show, saying "he says were trying to kill him, we should be done for attempted manslaughter", to which another of the studio staff said, "oh no, dont say that". His comment was in reply to a comparison Id made the previous evening between my persecutors and the Polish secret police who murdered dissidents.

Martyn Lewis Denies & Lies, But Wont in Writing

In February 1997 I wrote to BBC Viewer & Listener Correspondence and asked them to investigate the claim that their newscasters had engaged in "interactive watching". They replied that they had asked Martyn Lewis and Michael Buerk whether they had engaged in such practices, and that they had both made verbal denials to VLC, but were refusing to put their denials in writing.

I can understand that they might think that if they were to make written denials to me, then many other people with my condition might write to them with similar questions. But Ive asked a couple of journalists if theyve been writing about me, theyve made written denials, Ive believed them, and I have not put their denials on my website because, since I believe their denials, it would not be relevant to publish them.

To me it looks as if Lewis and Buerk are happy to lie verbally but not in writing, because written falsehoods would place them unambiguously in the wrong, whereas they can try to talk their way out of verbal lies if they are ever caught, or perhaps even deny the verbal lies completely? If they lie without shame, then why would they have any shame about future lies about lying?

One of the strangest aspects of "TV watching" is that Buerk and Lewis have convinced themselves that their "interactive spying" is reasonable behaviour. Martyn Lewis thinks of himself as a "gentleman". He expressed in 1992 that he was "on my side". If this matter ever comes out into the open, I wonder what these newscasters will have to say for themselves, and what the British public will make of their behaviour?

Media Persecution Evidence on my Website

You may directly access the Evidence section on my website at URL;

The category currently contains four video segments, a number of audio files and three published articles. The first video of ITN's John Suchet is unfortunately a mistake - after looking at it again it is obviously not about me. The two Ken Clarke excerpts may or may not be about me; it is funny that he should keep on harping about "paranoia" and "madness", but I have given these ratings of only 30% certainty, as it is more likely that they are not about me in particular, and Clarke is simply displaying the normal prejudices against the mentally ill found in much of society.

The piece I find most interesting is the Dimbleby/John Major interview from April 1997. I have assigned this a 90% rating. Dimbleby starts by emphasising a report from the "Knutsford Guardian". Major recognizes what's going on and joins in with a falsely apologetic "heaven forfend". The emphasis is on the first syllable pronounced "nuts" in "Knutsford", which is repeated three times. Of course this is hardly anywhere near convincing evidence; the really clear items were all in 1990-92, and they are basically unobtainable now.

If you're reading the website, have a look at the two files from David Hepworth's programme on GLR radio. The first one from 21/Feb/1997 has him talking about an "embarassment" of prizes and "absolute obscene", in reference I believe to the verbal sexual abuse that was being used against me at the time (and which unfortunately is still current). In the second file dated 9/May/1997 he again talks about "absolute embarrassment" of prizes, followed by laughter. To my mind he knows I am listening to his programme, and deliberately makes these remarks for my benefit, with very little attempt to disguise their purpose.

Bernard Levin - "Fanatic's Fare for the Common Man"

On 21 September 1991 this article by Bernard Levin appeared in The Times. It is reproduced in the Evidence section of the website, or may be accessed directly at URL;

To my mind, Levin's article described the situation at the time and in particular a recent meeting with a friend, during which I for the first time admitted to someone other than my GP that I had been subjected to a conspiracy of harassment over the previous year and a half.

Levin writes about a "madman running loose about London" who "bursts into tears, and swears it is all true. And it is." I am pleased to agree with his assertion that "it is all true" because the truth is what I presented to my friend in September 1991 and it is what is being presented to the readership of these articles now.

Conclusion

The harassment, in particular media persecution, was at its strongest in 1990-92. Today, I am recording everything I watch, read and listen, and the media have pretty much given up. It is now incidents "in public" which make up what there is of MI5s persecution. But much of the material from 1990-92 still exists in archives, although the organisations which have those archives generally wont make the material available to the public, for copyright and other reasons.

MI5 can no longer employ the media to persecute me, partly because journalists now know who is behind the persecution, and also because I would publish any instances. My mistake during 1990-92 was to not record instances as they happened; Ive learned from that mistake, and know better now.

  Yeah, google sucks.
```

But I'm not in position to have normal usenet at moment. Internet is
not what was 5-10 years ago. Now it is a jungle.
In any case, I will not bother to kill some spammers here, because of
5 useful posts per year :-(

167. CIAC L-114 Hewlett-Packard login Vulnerability
168. CIAC L-115 Hewlett-Packard dlkm Vulnerability
169. CIAC L-118 Hewlett-Packard ftpd and ftp Vulnerability
170. CIAC L-119 Hewlett-Packard mkacct Program Vulnerability
171. CIAC L-134 HP Security Vulnerability In rlpdaemon
172. CIAC L-136 HP Security Vulnerability In PRM
173. CIAC L-143 HP libsecurity Vulnerability
174. CIAC M-003 Hewlett-Packard rpcbind Security Vulnerability
175. CIAC M-006 HP-UX telnetd Security Vulnerability
176. HP-UX / 800 models cue exploit
177. HP-UX 11.0 kmmodreg symlink problem
178. Hewlett-Packard Remote Logic Flaw Vulnerability in rlpdaemon
179. IBM AIX 4.3.x and 5.1 libi18n Buffer Overflow
180. AIX diagrpt root exploit
181. CIAC L-123 AIX libil8n Library Vulnerability
182. CIAC L-131 IBM AIX telnetd Buffer Overflow
183. Unixware 7.1.1 rtpm multiple bugs
184. Unixware 5.x vi predictable /tmp filenames
185. Unixware 5.x scoadmin predictable /tmp filenames
186. Compaq Tru64 Unix kdebugd vulnerability
187. LKM Hacking Made Easy
188. Yet Another Paper on Trojaning the Linux Kernel
189. Anti Anti-Sniffer Patch
190. Red Hat Linux "rsync" Vulnerability
191. Hewlett-Packard Buffer Overflow in Telnet Server Vulnerability
192. Multiple Vendor wu-ftpd File Globbing Heap Corruption Vulnerability
193. hplx-sendmail Vulnerability
194. Red Hat glibc Vulnerability
195. Netkit 0.17 in.telnetd exploitable overflow
196. Emacs rcs2log insecure /tmp usage
197. Fetchmail remotely exploitable memory corruption
198. IMP prior to 2.2.6 - 3 security issues
199. Linux 2.0, 2.2, etc kernel IP Masquerading Vulnerability
200. Linux Kernel 2.2.x execve/ptrace race condition still exists
201. Linux Slackware 8.0, kernel 2.4.5 world writeable files
202. Pic (groff) issues
203. CIAC L-067 - Linux worm Adore
204. CIAC L-104 - Linux xinetd Buffer Overflow
205. Analog Buffer Overflow
206. Multiple archivers - directory traversal issues
207. InoculateIT for Linux DoS, possible root compromise
208. SuSE 7.0 dip 3.3.7p security risk
209. exim format string bug
210. GazTek HTTP Daemon v1.4 (ghttpd) Exploitable Buffer Overflow
211. Imp-2.2.4 symlink attack
212. Linux execve() - read from /proc/$$/mem
213. Linux Kernel 2.4.x fingerprinting issues
214. LPRng Exploitable Race Condition
215. Linux man exploit

216. ml85p Linux Helper Binary for Samsung ML-85G Printer insecure temp file creation
217. nedit insecure file creation could lead to elevation of privileges
218. scotty (ntping) buffer overflow
219. OpenSSH - delete cookies file
220. rxvt buffer overflow
221. Samba - local users can corrupt local devices
222. smbd insuffucient parameter validation
223. Linux Slackware 7.1 /etc/shells poor permissions
224. TIAtunnel exploitable buffer overflow
225. Tripwire 2.2.1, tripwire 2.3.0 (and tripwire-ASR-1.3.1) insecure temp files
226. Linux xfs Denial of Service
227. xinetd-2.1.8.9pre11-1 possible remote root
228. xloadimage exploitable overflow
229. eXtremail remotely exploitable format string condition
230. cfingerd exploit
231. Screen 3.7.6 local exploit
232. Slackware /usr/bin/locate trojan
233. Slackware /usr/bin/man symlinks issues

Hi Folks,

I have a Falcon Rack system (the Wizztronics box). I use it with two external SCSI devices, so I decided to take a used 1U server case an put the SCSI components in that.

The 1U server box has a cutout for a floppy drive, and I still have a couple of external SF-314s floppy drives from my ST days. So I took the drive and connector board out of one and mounted them in the 1U server box... And then re-discovered that there is no 2nd floppy connector on the Falcon :(

Is there a straightforward way to hook up a 2nd floppy to a Falcon? It's not something I urgently need, so if it's a lot of hassle I'll skip it. I was just wondering if anyone has done this, or seen a diagram somewhere that shows what to do.

Thanks,

-dreq

Technically all you need is a ribbon cable with DF0 and DF1 set on the
appropriate floppy drives and cable iirc.

mark

That would work if the two floppy drives were in the same cabinet a few
inches apart.  You can see from my description above that this is not
the case.  I have an SF-314 connector and round cable, and want to add
the connector for it at the Falcon end.

I would need a 80 cm long floppy drive ribbon cable to connect the
external floppy, and I seriously doubt the ribbon interface was designed
to function at that length.

Thanks,

    -dreq

I have a feeling the Falcon is missing a bit of logic to support a
second floppy drive.

Doubtful this is anything you'll want to do but a Floptical would be the
perfect solution. SCSI, reads DD & HD disks besides 21MB Floptical. Don't
think they sold in great number but might be worth searching for. Requires
the ICD version that supported it. The last version produced didn't. Or
possibly something newer.

BTW, SF-314 is limited to DD(720K).

You asked if it was possible to hook up a second drive. Yes it is. I
actually have HD fdd's hooked to my MegaSTE and TT030 as well. So the
old SD/HD isn't an issue either;-) I literally dropped a HD drive into
my SF-314 and off it went, kinda cool. I reckon the Falcon would be the
same.

Actually it can. FDD's use low clock rates and data buffering is no
where near the problem it is for SCSI and PATA devices. I guess you
would have to wire a plug into the fdd cable for external use then shoe
horn it into the case somewhere.

Cheap option could be an old LS-120 too.

Its been done before, and only cabling is required;-)

Agreed. Couldn't recall the details of it so looked on Wikipedia. Didn't
realize it was based on the Floptical. They seem to think the 120 is rare so
that doesn't bode well at all for finding a Floptical anyway.

TBH they were a shitty design too. Most of the corporate customers I have that used them binned them after not to long.

Mark

MI5 Persecution: How Could It Be True?

If you have the patience to read these articles you will be struck by how apparently fantastic the claims being put forward are. You may ask yourself why such seemingly nonsensical assertions are made. This matter has been discussed on the Internets UK-local newsgroups for three years now, and the denizens of the uk.misc newsgroup (the so-called "miscreants") have come up with a number of theories to explain these posts; it has been variously suggested that they are a troll (an artificial creation for the amusement of its author), that they are made by MI5 themselves with the purpose of discrediting other conspiracy theories, and that the poster is mentally ill and the articles are symptomatic of the illness (the view held by most miscreants).

Are these claims the product of mental illness, or is that just a cover?

The most obvious explanation, that the claims made result from the admitted mental illness of the author, is the one which the persecutors intend be the one accepted without consideration being given to the possibility of the claims being true. The persecutors have actually been very clever about this, both in selecting as their target someone who was known from school or university as being borderline schizophrenic, and in ensuring the nature of their persecution corresponds to what often features in the delusions of a schizophrenic.

The very first incident of the persecution occurred in June 1990, when I was still a student at university in London. It consisted of a reaction (giggling) from the newsreader, Sue Carpenter of ITN, to what she saw happening in my living-room at my parents home where I was living. Before your imagination gets the better of you I should make clear that what the newsreader was reacting to was not too embarrassing in nature; my mother had brought an apple for me into the the room, and Sue Carpenter found this amusing.

I recognized that Carpenter had reacted to what she had seen in my living-room, yet this idea still seemed completely fantastic to me. My reaction was to continue watching television, particularly the news, to see if this incident would be repeated. It was, many times, both on BBC and ITV. An intelligent person would have thought to obtain a video recorder and capture some of these incidents in order to try to explain to an observer what he saw in these broadcasts. Unfortunately, I failed this test of intelligence, since I did not record these programmes. I have recently attempted to obtain from ITN tapes of their news programmes dating back to summer 1990, but, unhappily, they have advised me that they do not have complete programmes including newsreaders comments dating back to that period.

From the outset, the persecutors structured their actions to ensure that any complaint would be met with disbelief, and dismissed as delusional. This is why they chose as their target someone who was known at school and university to be borderline mentally ill; and it is why they fired the first shots of their campaign through the broadcast media. Schizophrenics commonly believe the media harass them; it would be exceptional for "full-duplex television" to exist in reality. Those with schizophrenia also commonly believe people are talking about them; again, the persecutors have shown themselves very rarely, but act through intermediaries, both in the workplace, and in public and during travel.

Mental illness is not the cause of these claims, but the simulation of its symptoms is a cover used by the persecutors to deny their victim the ability to have his compaints believed.

What evidence exists to support these claims of "interactive television/radio";?

Quite frankly, I have very little evidence to support my claims. You may examine the "Evidence" area of my website to see such evidence as I have been able to gather. None of it is remotely conclusive. The "smoking guns" all date back to 1990/91, and it is really rather late now to start trying to look for material dating back seven or eight years. In 1997 I started tape-recording every programme I watched or listened to. I also started carrying with me a high-fidelity minidisc-recorder with good quality microphone to catch incidents of public harassment, but this also has not been as successful or conclusive as I had hoped.

Perhaps the best item in the "Evidence" section is the audio file "Life is so hard" (it is labelled with Garfield the cartoon character on the site), which I have given a certainty level of 100%. This item relates to harassment at my workplace in Canada in 1996. A co-worker called Mark was coming up with phrases and expressions which were repeating things being said at my Canadian residence, consequently leading me to believe that my apartment and home phone were bugged, and that the persecutors were passing their gathered information on to Mark. On one particular evening I said in my apartment, "life is so hard, and then you die". The following day I was able to record Mark saying exactly the same phrase at work.

Unfortunately when "they" know you are recording them, they simply dont say things which would unambiguously show harassment. When Mark the co-worker knew he was being recorded, he only made his remarks out of range of the recorder, for example outside the building. When the TV newscasters or radio disc jockeys know they are being taped, they limit themselves to saying things which are ambiguous, which even in my mind may or may not be personally directed against me.

Who knows about this persecution?

Surprisingly many people know. People in the media, such as BBC and ITN newscasters including Martyn Lewis and Michael Buerk, and radio disc jockeys such as Chris Tarrant of Capital Radio, know what is going on, and take part in it. Some co-workers at my former workplaces in England and Canada have known about the harassment. Quite a few people in the general public are also included. I believe the police are aware of the persecution, but, unfortunately, have chosen not to take any action to stop it. I have complained at my local police station in London several years ago, and I have stated on the internet newsgroups that I have done so, hence the police will be well aware of my wish to see the matter resolved. I believe their inaction denotes a dereliction of duty, but without good evidence, I am powerless to compel them to take steps to prevent further harassment, or deal with what has already taken place.

What is the purpose of sending these faxes?

These faxes are being sent to three distinct groups of people, namely Members of Parliament, the media, and diplomats & legal people. As you will have observed I am making use of the email-to-fax gateway at Demon

Internet to send these faxes. I am forced to use this gateway since I currently live in North America, and cannot afford the high cost of direct phone calls to the UK.

My purpose in publicising my claims is firstly to discourage the persecutors from continuing their campaign, and also to attempt to bring their campaign out into the open, and thus perhaps identify the persecutors. Neither aim has been achieved yet, but I hope that with sufficient stimulation these aims may yet be accomplished.

The problem with the second aim is that those who read this article will fall into two groups, those who dont know anything about the persecution and consequently will disbelieve my claims as delusional, and those who do know about the harassment and may have some idea of who is behind it, but realise that if the harassers are exposed and the truth brought out into the open, then powerful British institutions will substantially lose prestige, and be exposed to ridicule.

It would give me hope to believe that these faxes will create a third group of people, those who find out that I am telling the truth, and who follow their consciences in standing up and seeing justice done. Only time will tell if this hope will be realized.

Why do you think MI5 are responsible?

The question of who is ultimately responsible for this eight-year harassment is one which is very difficult to answer, as the persecutors have never clearly made their identities known to the persecutee. However, I believe I am correct in attributing the continuing victimisation to elements of the British Security Service MI5, and in this article, I will try to explain the reasons for this belief.

The British internet magazine ".net" featured my website on page 17 of their March 1998 issue (number 42). Their review kindly describes it as an "excellent site" and gives some details of what the net surfer will find there. Should you wish to reply to this article you can do so;

"When did you first suspect MI5 were responsible?"

Over Easter 1995 I went to see a local solicitor in London with a view to talking to the police about the harassment. Soon afterwards I did go to my local police station in Clapham and spoke to an officer there. The solicitor made a comment which suggested to me that the persecution I had been experiencing may have been organised by an intelligence service.

Up to this point, I did not have any clear idea as to who was behind the harassment. Only their agents were visible, in the media, on television news programmes, and on the radio; in the workplace, where things said at my home were repeated verbatim; and in some cases abuse in public and during travel, for example on the trip to Poland in June 1992 which I have already described.

Both from the fact that widely disparate individuals and organisations were employed as agents in the campaign against me, and from the fact that an entity would be required to marshal their resources in the areas of spying on my home and giving gathered information to their agents, it was clear to me that a single entity was responsible for carrying out the campaign. Yet from June 1990 until Easter 1995 I did not have a clear idea of who might be responsible. I guessed that perhaps some private individual or group of persons who saw themselves as my enemies had perhaps paid private detectives to organise the harassment. Alternatively, since the campaign had started in the media, I made a far-fetched supposition that perhaps it was an ad-hoc group of media people who had set themselves up in opposition to me. After Easter 1995 I saw that these guesses were wrong, and I made an I believe much more accurate estimate as to who my enemies really are.

"Why couldn't a private group be behind the persecution?"

There are several reasons why a private individual or group would not be behind this campaign.

Quantity of resources / Money. Here is what one Usenet (internet newsgroup) participant had to say (several years ago) on the topic of how much money it would cost just to keep the surveillance going.

PM: >But why? And why you? Do you realize how much it would cost to keep
PM: >one person under continuous surveillance for five years? Think about
PM: >all the man/hours. Say they _just_ allocated a two man team and a
PM: >supervisor. OK., Supervisor's salary, say, #30,000 a year. Two men,
PM: >#20,000 a year each. But they'd need to work in shifts -- so it would
PM: >be six men at #20,000 (which with on-costs would work out at more
like
PM: >#30,000 to the employer.)
PM: >
PM: >So, we're talking #30,000 x 6. #180,000. plus say, #40,000 for the
PM: >supervisor. #220,000. Then you've got the hardware involved. And
PM: >any transcription that needs doing. You don't think the 'Big Boss'
PM: >would listen to hours and hours of tapes, do you.
PM: >
PM: >So, all in all, you couldn't actually do the job for much less than
PM: >a quarter million a year. Over five years. What are you doing that
makes
PM: >it worth the while of the state to spend over one and a quarter
million
PM: >on you?

A private individual or group would not spend over a million pounds to verbally torture a victim without some financial motive or gain. Private industry is driven by the profit motive, and there is no financial profit to be had from carrying out a campaign in this way. If a private enterprise were behind it then they would have taken direct physical action a long time ago.

State enterprises, on the other hand, can afford to be wasteful, since they are funded by the taxpayer. They do not have to show a money profit. The employees or contractors employed by a state organisation such as MI5 are driven by their own personal profit motives, to make the most money out of their employers for the longest period of time. MI5 is funded to the tune of #150M p.a.; even a few hundred thousand a year would to them be affordable if their managers could convince themselves of the necessity of what they were doing.

Quality of resources / Technical resources - electronic and other surveillance. In summer 1994 a reputable and competent private detective agency was employed to conduct a counter-surveillance sweep of my home in London. They charged us over #400 for this, conducted a thorough search for radio transmitting devices, hard-wired "probe" microphones and also tested the telephone line. They found nothing. This was not altogether surprising, since it had been made very clear to me that there were bugs in my home; the "buggers" would not have made this clear unless they had felt their bugs were of sufficient sophistication as to be safe from detection.

But there is another lesson to be gained from the failure of the private detectives to find anything. The agency employed was one of the most reputable in London. They were employed on the principle of "setting a thief to catch a thief", for if the harassment were being carried out by private detectives, as I then believed, then surely another set of private detectives would be able to find the bugs that they had planted. That these "private eyes" were unable to find anything, and that the harassers were confident that they would not be able to find any bugs, points to the harassers being an order of sophistication above a private agency, and leads me again to believe that a state intelligence service is responsible for the surveillance and harassment.

Quality of resources / Technical resources - Interception of Postal service. In summer 1994 when I emigrated to Canada to try to escape the harassment, I wrote letters home to my family and friends in London. Quite soon after my arrival in Canada, the harassers were able to find precisely where I was staying. The only way I can see of "their" being able to find out my new address was by interception of my letters to the UK.

Later in 1994, I conducted an experiment to see if my letters home were indeed being read. In a letter home I wrote of being depressed and talked in vague terms of suicide. I deliberately chose this topic, since I believed it was the outcome my harassers were trying to achieve, and that if they read the letter, they would "echo" its contents. Sure enough, soon afterwards there were two incidents of people shouting "suicide" at me in public places in Canada.

It is inconceivable for a private agency to have the ability to intercept postal mail. The state security service on the other hand is well known to engage in these activities.

Quality of resources / Access to Media. One of the strangest aspects of this case is the access "they" have to the broadcast and print media. I still do not understand what could persuade newscasters such as Martyn Lewis and Michael Buerk, who consider themselves "gentlemen", to behave in an almost voyeuristic way by "peeking" into the living room of one of their viewers. A year ago I wrote to the BBC asking if these newscasters would confirm or deny the accusations made against them. The BBC replied that their newscasters had denied the accusations, but refused to do so in writing.

It is well known that MI5 have the ability to plant stories in certain newspapers, but convincing television newscasters to "watch" a viewer while they read the news would surely be very difficult for them to accomplish, unless they presented themselves to these journalists as being, for example, a group in the media who were seeing to it that I got my "deserved" treatment. MI5 has a history of manipulating the media, so it might not be too difficult for them to accomplish such a trick, whereas a private group would not have this ability.

"Have they ever denied that they are the Security Service?"

No. Never. This is in fact the main reason why I believe "they" are MI5 and not a privately funded group. If my guess had been wrong then I am sure that "they" would have crowed over my mistake, but they have never admitted nor denied that they are employees of MI5.

In early January 1996 I flew on a British Airways jet from London to Montreal; also present on the plane, about three or four rows behind me, were two young men, one of them fat and voluble, the other silent. It was quite clear that these two had been planted on the aircraft to "wind me up". The fat youth described the town in Poland where I had spent Christmas, and made some unpleasant personal slurs against me. Most interestingly, he said the words, "he doesnt know who we are".

Now I find this particular form of words very interesting, because while it is not a clear admission, it is only a half-hearted attempt at denial of my guess that "they" = "MI5". Had my guess been wrong, the fat youth would surely have said so more clearly.

"If MI5 were behind it, why would they wish to mask their involvement?"

I have heard a number of times a belief from people in the media that it is they, the media people, who are behind the abuse. In spring 1994 Chris Tarrant the Capital Radio D.J. said sarcastically on his breakfast show, "You know this bloke? he says were trying to kill him. We should be done for attempted manslaughter". We, we, we. Tarrant thought it was a media conspiracy.

Returning to the question of "interactive watching" by television newscasters, it would again be much easier for them to take part in that sort of activity if they convinced themselves that the surveillance and abuse were organised by "their own", by media people. It must be second nature to MI5 to mask their involvement in the matters they deal with; in this case, they pretend the campaign is organised by a group in the media, and any journalists who suspect otherwise keep their silence.

Conclusion

Over the last three years I have stated with some force my belief that MI5 are responsible for my misfortunes. I have done so on Internet newsgroups, in letters and faxes to people in politics and the media in the UK, and in 1997 I made a formal complaint to MI5 regarding their activities; the Security Service Tribunal replied in June 1997 that "no determination in your favour has been made on your complaint". (I believe the statement by the Security Service Tribunal can be disregarded, as they have never, ever made a ruling in favour of a complainant.) In three years of naming MI5 as my oppressor "they" have never denied the charge. To me, their silence on this point indicates that my guess was accurate. I believe my persecutors stand identified. The question of why they should carry out this campaign is one I will try to answer in a future article.

MI5 Persecution Update: Friday 15 May, 1998

The persecution has been quite severe for the last week. It appears that my enemies are reacting to the steady stream of faxes making their way over the Atlantic to the fax machines of Westminster politicians and the media. Here is whats happened in the last few days;

The week started off with an incident in the cafeteria at a local shopping centre where I habitually drink my morning coffee. My enemies have concentrated since winter 1995/96 on throwing a particularly horrible sexual slander against me. They "put people up" to repeat this slander against me, and this is what happened again here.

On Thursday morning (yesterday), instead of going to the usual cafeteria I went to a nearby convenience store for coffee. The same horrible sexual slander was shouted at me very loudly by a member of staff as I walked into the store. This was the first time I had ever bought morning coffee in that shop. The other staff obviously knew what was going on, one of them said, "they screwed up my life".

The fax gateway I use to send these faxes to the UK has been working hard these last few days to shut down my access by barring the accounts I use to send these faxes.

I have received an anonymous threat from fax number 0171-219-6101 (the machine gave its name as "ETRA-HoC") which said, "Stop sending to this fax no 0171-219-6101 or else" (the consequences of continued transmission were unspecified). I invited the sender to apologise for his threat, but received no response.

This all adds up to quite a severe reaction to my faxes of the last few weeks. I actually find this quite heartening since it shows that my faxes are finding the mark and there may yet be a breakthrough in my efforts to expose the Security Service conpiracy of abuse against me which has now been going on for eight years.

MI5 Persecution: "Why would they be doing this to you, sir?"

This article will concentrate on the difficult question of "Why". The question which forms the title of this piece was asked of me by the police officer I spoke to in Easter 1995, when I went to make my complaint.

There are really two sides to this question. Firstly, why should MI5 be harassing anybody in this fashion? Secondly, if they choose to behave in this way, why should they have selected me in particular, and not somebody else? Alternatively, why did the persecution start, and why is it continuing?

I do not have definite answers to either side of this question, since my persecutors have usually kept themselves hidden and only acted through other parties. To know "why", one would have to know who the persecutors are, and something of their personalities, since their abuse is almost certainly symptomatic of a personality disorder of the abusers. Certain things however can be deduced about the abusers from the nature of their behaviour, and I will talk about this later in the article.

Why did it start?

It is clear that the persecution must have been initiated by someone who knew me personally, either at school, or at university, or socially, and knew that I was borderline mentally ill, since this is what makes me a target for the persecutors. Unfortunately, the originators have never been identified, and there are several possible candidates. Neither has the link from the originators of the persecution, to the persecutors themselves, ever been made clear. So who are the originators?

University Staff

The identity of the originators may lie in the timing of the persecution. It started in June 1990, while I was finishing a course at Imperial College in London, and a year after I graduated from Cambridge, where I received a degree in computer science. At Cambridge I had achieved some notoriety in the computer lab from various nefarious exploits. Roger Needham attacked me by saying that "there were great hopes for it, but it failed terribly". When I started at Imperial I found that my reputation had preceded me; Cambridge computer lab had spoken to I.C. lecturers about me. I.C. lecturer Frank McCabe summed up commenting about "setting up a straw man so you can tear him down". (Despite being "torn down" by the Cambridge computer labs lecturers, I still achieved a good first degree and a Masters degree at Imperial.)

Other students at university

So, the originators may have been university staff who knew me from my student days. But there are other possibilities. I had other enemies at university, including some fellow students. At my Cambridge college it was common knowledge that my mental health was dubious, and it was known that I talked to myself in my sleep - the floor and walls were quite permeable to noise, so other students heard. I was given the nickname "gibber" because of this habit. Sometime later, I managed to catch myself talking in my sleep when I woke up in the middle of the night.

Here is a quote from a participant in the internet newsgroup where I have been posting for the last three years;

>One thing which has been missing from this discussion is this simple
>prognosis: that maybe he is right and that, despite his admitted
>mental condition, there really is a campaign against him organised by
>now-influential ex-students of his university.

People I knew socially

I had yet other enemies in 1990 (I am a man of many enemies!). In January 1990 I broke up with some people I had been going out with socially. One of them, by the name of Andy Turner, wrote a letter to Alan Freeman, who at the time was a Radio 1 DJ. Freeman read part of the letter out on his Rock Show, about the "one who wore out his welcome with random precision", saying "thats a hell of a letter you wrote there Andy", and "with a schizophrenic youre never alone".

It is my belief that Andy Turner and his friends were trying to make trouble for me, and Turner wrote to Freeman with this in mind. Freeman may have discussed the letter with others, and things may have snowballed from there. This is, of course, pure supposition. The fact is that I do not know who the originators are, and can only guess.

Once it started, why is it continuing?

The answer to this question is obvious. It is unacceptable to the "powers that be" in the UK to have somebody running around who knows he has been targeted by the Security Service and media organizations, and who is in a position to embarrass British institutions. This has become particularly evident in the last week; as I send more faxes to UK politicians and media, so the pressure on me grows, and the volume of abuse increases.

Part of the reason the persecution continues is in the personalities of the abusers, and it is this subject to which I will turn to next, since the key to understanding the persecution lies in understanding those who carry it out, as much as we can.

The Security Service operatives, the persecutors, are they psychopaths?

Let us first examine the definition of the term "psychopath". DSM-IV defines "anti-social personality disorder" as a "pattern of disregard for and violation of the rights of others ... deceitfulness, irritability and aggressiveness ... consistent irresponsibility and lack of remorse". The Harvard Mental Health Letter of Sept 1995 describes these people as using "charm, manipulation, intimidation and violence to control others and satisfy their own needs. Lacking in conscience and in feelings for others, they cold-bloodedly take what they want and do as they please", having "no guilt or regret".

I must say, reading this description of the condition, that it fits the persecutors perfectly. The persecutors have never shown the slightest remorse or guilt. Even when I was severely ill, they continued to abuse me. They have repeatedly blamed their actions on me, which is another trait common amongst psychopaths. They have no respect for my legal or personal rights, and they use intimidation and verbal violence.

If the MI5 operatives are psychopaths then it would explain both why the persecution started, and the degree of verbal violence. Psychopaths by definition damage other people; here, the MI5 operatives find an outlet for their personality disorder, through "cripple-kicking".

Xenophobia on the basis of mental illness, and race

My enemies have made clear many times that one of the reasons they are persecuting me is because of my admitted mental illness. However, it is my belief that they are also persecuting me because I am not of ethnic English origin, and the fact that there have been several incidents of an overtly racist nature reinforces this view.

In one case, two youths on a tube train in London made openly racist references to me as a "soft toy, not up to British Standards". Another person near my home made remarks about "Polish people". In yet another incident in Croydon, a youth made comments about "foreigners".

But the main thrust of their xenophobia is because of my mental illness. I should make clear that I do not look ill; if you met me, you would not know that I had the illness. I take a relatively low dose of medication, and feel quite well. But the persecutors have repeatedly harped on about my supposed serious mental illness; they have called me a "nutter", a "schizophrenic", etc. They have also persuaded other people to use these terms of abuse. They are able to get away with this because abusing the mentally ill is still something which is mostly acceptable in Britain; the media do it, "nutter" is not taboo in the way that "nigger" is.

Conclusion

There are several groups of people who might have wished to cause me trouble, and I still do not know who originated the persecution. Nor do I know how the originators came to be in contact with the (presumed) Security Service operatives who have been carrying out the campaign. To know conclusively why it started, we would have to know who started it, and this information is not available.

However, we can infer some things about the personalities of the persecutors from their methods, and from the degree of verbal violence they employ. It is clear that a main reason for the continuing harassment is the psychopathic disorder of the MI5 agents who carry it out. That they have never been "brought to book" for their misdeeds reinforces their belief that they do no wrong; and, unhappily, until they are brought to book, their persecution campaign looks set to continue.

MI5 Persecution: .net Magazine Applauds my Website

The March 1998 issue (number 42) of .net Magazine reviews the MI5 Persecution website describing it as an "excellent site". The webpages describe in detail the nature of my persecution since 1990 by what are believed to be elements of the UK security service.

(snip image)

You are encouraged to read the web pages which include

o a FAQ section outlining the nature of the persecutors, their methods of harassment through the media, people at work and among the general public
o an evidence section, which carries audio and video clips of media and workplace harassment, rated according to how directly I think they refer to me
o factual descriptions of the state security agencies involved
o scanned texts of the complaints I have made to media and state security agencies involved
o posts which have been made to netnews over the last three years on this topic

MI5 Persecution Update: Friday 13 November, 1998

If You Intend To Reply, Please Read This

If you have any questions or observations you would like to share with me, then you are very welcome to reply to my fax number 0171-681-1190. But please.... keep your response to one page if you can! I have had several people faxing my article back to me, including one MP faxing back twenty pages. I do not know if he had anything intelligent to say in his 20-page fax because I applied judicious use of the "Delete" key on my computer. Faxes over a page or two will be deleted without being read.

MI5 Resume Hostilities in Response to these Faxes

When I wrote last weeks "MI5 Persecution Update" I remarked how quiet my life had become. No longer! MI5 have restarted hostilities with a vengeance the past week, in response I believe to the faxes I have been sending to members of the House of Commons.

On Saturday 7 November I went to Clapham Picture House cinema to see the film "Antz" (a very enjoyable film). At the cinema, I was verbally assaulted by a group of teenagers with the words "still crazy", repeated about ten times. There was a film with that name showing at the cinema, but it was clear their abuse was directed at me. I do not look ill, so why would they pick on me? answer, the incident was set-up by the persecutors. One of the teenagers also said to another, "I don't know what we're laughing at".

The following day, Sunday 8/11/98, I was on my way to play squash when I was verbally assaulted by a youth who said "it was so funny", without the slightest trace of humour. What he meant by this phrase was that was funny, and they were trying to humiliate me. I have heard this phrase "it was so funny" used at me before many, many times over the last eight and half years.

Please Encourage Keith Hill MP to Help Me

I live in a bugged house, bugged both for audio and video. My movements are monitored by MI5. The Security Service have followed me to Canada, to

Poland and the Continent, to the States. I cannot work anywhere, not in England, not in Canada, because MI5 will destroy whatever employment I am able to obtain. I have asked Keith Hill MP to help me, and he has refused.

The situation is intolerable. It is Mr Hills job to help me out of this mess. So, please, as I said in the last fax a week ago: Do not waste your time returning multiple copies of my faxes to my fax mailbox, as some of you have done. Instead;

Please encourage Keith Hill M.P. to help me.

I am sorry to be using this device to encourage Mr Hill to help, but I think eight and half years are quite enough and it is time something was done to bring this matter to a close.

MI5 Persecution : BBC Newscasters Spying on my Home

This week's topic is the quite extraordinary claim that BBC newscasters such as Martyn Lewis and Michael Buerk have spied on my living room while they read the news. I currently have an advert running for the next six months in Private Eye's "Eye Say" column (at a cost of over #200) which says,"MI5 Persecution - BBC Newscasters Spying on my Home"; the story of my campaign in the Eye is on my Website at; http://www.pair.com/spook/evidence/plaint/priveye.htm

BBCs staff magazine Ariel also ran my advert "BBC Newsreaders Spying on my home" for one issue in the Personal category on 8/July/1997 before it was spotted and axed by editor Robin Reynolds; please see webpage; http://www.pair.com/spook/evidence/plaint/ariel.htm

Beginnings

The very first incident in the "MI5/BBC Persecution" occurred in June of 1990, when a newsreader reacted to what she saw in my living room at home as she read the news. My mother had brought an apple for me into the room, whereupon the newsreader smirked and giggled, apparently finding this funny. I couldn't believe what I was seeing. I carried on watching news and other television programmes to see if presenters would show signs of "interactive watching"; to my surprise, this happened again and again. Unfortunately, I did not have my wits sufficiently about me to videotape these programmes, and it is now almost impossible to obtain recordings dating back to 1990.

Most of the "TV watching" has occurred on the news, and most of it in summer 1990, although some as late as autumn 1993. My website has a few extracts of what might be politicians "getting at" me, in particular John Major and interviewer Dimbleby sharing a joke about the "Knutsford Guardian" which is almost certainly about me.

I sold my portable TV in autumn 1990 and stopped watching television regularly. I realise now that this may have been a mistake. What I should have done was to watch TV and listen to the radio, but tape-record everything and make a note of what each excerpt meant to me. I would then be in a much stronger position as regards to evidence that I am now. That is what I am trying to do now, but unsurprisingly the TV/radio presenters have stopped getting at me, now they know they are being recorded.

Examples of Media Harassment

Here are a few examples which I can still remember of media harassment;

In early 1992 I was watching the BBC news with Martyn Lewis on a small black-and-white portable television at my then home in Oxford. I threw a term of abuse at Lewis; he flinched, then gave a grin and made a comment from which I understood that he had been on my side, but might have changed his mind as a result of what Id just said to him.

Victor Lewis Smith in his TV (BBC2?) program at the end of 1993, had a taxi-driver saying, "theyre all out to get me", to which VLS replied, "but you're quite intelligent aren't you?" (what a nice chap VLS is, compliments no less!)

Paul Daniels the TV magician, sometime in 1990-92 (sorry I can't be more precise but it was so long ago), made a "crying face" and put his face in his hands, which was his way of expressing that I was frequently crying in 1990-92, and that he and other media people found my crying funny.

Kenny Everett (deceased) on some talk show, compared me to a "huge ape" who "scratches himself"; he made some other remarks about what the "ape" got up to which unfortunately I cant remember. (I remember that Everetts comments were quite sympathetic and human, but were obviously about me.)

Stephen Fry on another talkshow (Wogan I think) talking about "masturbatory fantasies", he then referred to me with the words "you prat"; I wonder if the studio audience knew what he was talking about and to whom his comments were directed?

Griff Rhys Jones on Clive James' TV show, made a "lunatic face" (wide fixed grin) to which I said to the TV that he had a "face like a horse's arse", to which Clive James said to GRJ "did you hear that?"

Crimestoppers summer 1990, remarks by a Midlands police officer on the programme, while Nick Ross was presenter (as far as I can remember). The officer talked about "in car entertainment". Nick Ross said to officer, "why don't you stop doing it?" to which he replied, "we can't while he's like this".

BBC2 Newsnight in autumn 1993 had a piece on football hooliganism. A black interviewee said apparently of the hooligans, but in fact of me; "they're just idiots, carry on with the surveillance".

There was an incident with Jonathan Ross which I remember clearly; he was on both BBC and ITV television at the same time, one (ITV I think) was recorded, the other channel was live. Ross has a speech impediment which causes him to pronounce his "r"s as "w". I sarcastically said something about "Mr Woss" to the recorded channel, then turned over to where he was live, and he repeated "Woss" with heavy emphasis and sarcasm.

On the radio, in spring 1994, Chris Tarrant made a sarcastic remark in his morning show, saying "he says were trying to kill him, we should be done for attempted manslaughter", to which another of the studio staff said, "oh no, dont say that". His comment was in reply to a comparison Id made the previous evening between my persecutors and the Polish secret police who murdered dissidents.

Martyn Lewis Denies & Lies, But Wont in Writing

In February 1997 I wrote to BBC Viewer & Listener Correspondence and asked them to investigate the claim that their newscasters had engaged in "interactive watching". They replied that they had asked Martyn Lewis and Michael Buerk whether they had engaged in such practices, and that they had both made verbal denials to VLC, but were refusing to put their denials in writing.

I can understand that they might think that if they were to make written denials to me, then many other people with my condition might write to them with similar questions. But Ive asked a couple of journalists if theyve been writing about me, theyve made written denials, Ive believed them, and I have not put their denials on my website because, since I believe their denials, it would not be relevant to publish them.

To me it looks as if Lewis and Buerk are happy to lie verbally but not in writing, because written falsehoods would place them unambiguously in the wrong, whereas they can try to talk their way out of verbal lies if they are ever caught, or perhaps even deny the verbal lies completely? If they lie without shame, then why would they have any shame about future lies about lying?

One of the strangest aspects of "TV watching" is that Buerk and Lewis have convinced themselves that their "interactive spying" is reasonable behaviour. Martyn Lewis thinks of himself as a "gentleman". He expressed in 1992 that he was "on my side". If this matter ever comes out into the open, I wonder what these newscasters will have to say for themselves, and what the British public will make of their behaviour?

Media Persecution Evidence on my Website

You may directly access the Evidence section on my website at URL;

The category currently contains four video segments, a number of audio files and three published articles. The first video of ITN's John Suchet is unfortunately a mistake - after looking at it again it is obviously not about me. The two Ken Clarke excerpts may or may not be about me; it is funny that he should keep on harping about "paranoia" and "madness", but I have given these ratings of only 30% certainty, as it is more likely that they are not about me in particular, and Clarke is simply displaying the normal prejudices against the mentally ill found in much of society.

The piece I find most interesting is the Dimbleby/John Major interview from April 1997. I have assigned this a 90% rating. Dimbleby starts by emphasising a report from the "Knutsford Guardian". Major recognizes what's going on and joins in with a falsely apologetic "heaven forfend". The emphasis is on the first syllable pronounced "nuts" in "Knutsford", which is repeated three times. Of course this is hardly anywhere near convincing evidence; the really clear items were all in 1990-92, and they are basically unobtainable now.

If you're reading the website, have a look at the two files from David Hepworth's programme on GLR radio. The first one from 21/Feb/1997 has him talking about an "embarassment" of prizes and "absolute obscene", in reference I believe to the verbal sexual abuse that was being used against me at the time (and which unfortunately is still current). In the second file dated 9/May/1997 he again talks about "absolute embarrassment" of prizes, followed by laughter. To my mind he knows I am listening to his programme, and deliberately makes these remarks for my benefit, with very little attempt to disguise their purpose.

Bernard Levin - "Fanatic's Fare for the Common Man"

On 21 September 1991 this article by Bernard Levin appeared in The Times. It is reproduced in the Evidence section of the website, or may be accessed directly at URL;

To my mind, Levin's article described the situation at the time and in particular a recent meeting with a friend, during which I for the first time admitted to someone other than my GP that I had been subjected to a conspiracy of harassment over the previous year and a half.

Levin writes about a "madman running loose about London" who "bursts into tears, and swears it is all true. And it is." I am pleased to agree with his assertion that "it is all true" because the truth is what I presented to my friend in September 1991 and it is what is being presented to the readership of these articles now.

Conclusion

The harassment, in particular media persecution, was at its strongest in 1990-92. Today, I am recording everything I watch, read and listen, and the media have pretty much given up. It is now incidents "in public" which make up what there is of MI5s persecution. But much of the material from 1990-92 still exists in archives, although the organisations which have those archives generally wont make the material available to the public, for copyright and other reasons.

MI5 can no longer employ the media to persecute me, partly because journalists now know who is behind the persecution, and also because I would publish any instances. My mistake during 1990-92 was to not record instances as they happened; Ive learned from that mistake, and know better now.

MI5 Persecution Update: Friday 19 March, 1999

If You Intend To Reply, Please Read This

Please.... keep your response to one page if you can! I have had several people faxing my article back to me, including one MP faxing back twenty pages. Faxes over a page or two will be deleted without being read.

Theyve started again. Why? I have no idea.

Unhappily, the persecutors, whoever they might be, have started their activities again over the last two weeks. Usually they try to blame their activities on their victim, but this time they have stopped even pretending that the persecution is my fault. Their verbal abuse appears as gratuitous as it is vicious.

Last Sunday 14 March, I went for a meal in Londons Chinatown with some friends. As we were walking down Gerrard St, a man shouted loudly, twice, the obscenity which has been directed at me for some three years now. This followed previous incidents where the same words had been used. It is very upsetting to be verbally abused in this way and to know that the cowardly abusers are guaranteed to "get away with it" because if you report it then it will be assumed to be part of your illness.

Keith Hill MP (Labour - Streatham), my elected representative, as ever refuses to help.

MI5 Persecution : How to Identify the Persecutors

Usually delusional thinking does not allow the perpetrators to be identified, or the alleged persecution to be proved. My so-called "delusions" are different, because I have several times over a period of some nine years seen the same people, in widely varying places. Most importantly, their names have been recorded, on aircraft passenger lists and hospital register; and if only the police would do their job conscientiously then the persecutors could be identified and this unhappy story brought to a final conclusion.

BA93 Heathrow->Toronto, 10 June 1993

In 1993 I flew to Toronto for a holiday. On disembarking from the aircraft, a group of four men who travelled together looked in my direction, and one of them said, laughing, "If he tries to run away well find him".

I was absolutely stunned when I heard this. I wasnt surprised that they had followed me to Canada, but it shocked me that they had been on the same flight, and that one of them had foolishly given their group away. Unfortunately I was so stunned that I made no attempt to stop them as they got off the flight and proceeded into the terminal. I did not see these people again during my visit to Toronto. I do not know whether they followed me, or whether they were only part of a larger group, some of whom may have already been on the ground and awaiting my arrival.

Over the next few years I made a number of attempts, all unsuccessful, to obtain the passenger list for this flight. British Airways keeps passenger flight coupons for each flight; so if only the police would do the job that is being asked if them, then these four persecutors could be identified, and thus their employing organisation, which is very likely to be the Security Service, determined.

These four men were, apart from the joker who looked the odd man out in the pack, very serious individuals. They appeared to be in their forties or fifties, and my impression on seeing them was that they might have been former soldiers. Their campaign against me concentrates on how "funny" their abuse is; but in this they are plainly lying, because they realise how awful will be the damage to the establishment of which they form part, if the truth about the persecution ever sees the light of day.

The riddle of "Alan Holdsworth"

During Oct/Nov 1996 I saw a doctor several times about an infection, and on 2 Nov 1996 I went to Emergency at the Ottawa Civic Hospital and saw Dr Worthington, who was then Chief of Emergency Medicine. I had to wait several hours before being seen, and several people jumped ahead of me in the queue. One of these was a grey-haired man in his forties or fifties. This may have been one of the men on the BA flight in 1993; I cannot be sure. When Dr Worthington asked his name, he loudly said, "Tad", which is the common abbreviation of my name. Dr Worthington looked puzzled, glanced at the sheet in front of him, and said, "but your name is Alan Holdsworth isnt it?". (I am pretty sure his Christian name was Alan; I cannot be sure of the surname). The man looked put out, and said quietly, "yes".

Unfortunately, I did not follow up this incident immediately. Some time later, I wrote to Dr Worthington to ask the name of this patient, but he refused to give the name out.

I saw this person again two and a half years later, at Ottawa Airport, just as I was about to leave for England. In the warm weather, he was wearing a coat and woolly cap, and pacing up and down in a menacing and aggressive manner. Presumably he thought he was pretending to be a "nutter" and in this way was getting at me; my impression is that he doesnt need to pretend, Holdsworth or whatever his name is is clearly a psychopath and in a healthy society such a person would be locked up, instead of being paid public money to exercise his psychopathic instincts. But todays Britain, a country where the MI5 secret police are given free rein and nobody dares raise a voice in protest, is not a healthy society.

"He doesnt know who we are"

For some reason, whenever I take a British Airways flight, I get hassled by the "persecutors who wont admit theyre MI5". Since this business started, I have travelled BA three times; once in June 1993 BA93 (see above), once to/from Europe during Dec 95/Jan 96, and once in June 1998 with my mother to visit her family. The last journey, I was abused by two "plants" who kept repeating, loudly, "paranoid" (I have this recorded on minidisc). Presumably British Airways gives MI5 the seating plans for their flights, which allows MI5 to position their agents of abuse three rows behind me, so I cant face them, and they are throwing abuse at the back of my head. I have travelled BA as infrequently as possible; to Canada, I usually travel Air Canada.

Anyway, lets return to the second of the three BA trips, and in particular to the flight on 2 January 1996 from Berlin Tegel, to Heathrow, and onwards to Montreal Mirabel. Id waited all night at Tegel for the flight, and was very tired on reaching Heathrow. On the plane to Montreal, two youths sat about three/four rows behind me and to the right, in the window seats. One of them, a rather fat "asshole" to use the Americanism (it fits), kept on going on about "this bloke", saying among many other things, "he doesnt know who we are".

Now that form of words is particularly interesting, because from May 1995, some 8 months previously, I had been vigorously denouncing the "MI5 Persecution" on Usenet. So if Id guessed wrong, then you might expect the harassers to crow about it; which they have not done. If I had guessed right, and the persecutors have been silent before and since this flight, then they could either admit they were MI5, which would be a very serious thing for them to own up to, or they could brazenly lie, in which case I would report their lie, and since many people must surely know who they are, they would lose all credibility. So they have remained silent; apart from this one phrase on the BA flight, where one of their agents said, "he doesnt know who we are". Note carefully that this phrase is NOT a denial, it only appears to be a denial; since it does not say that my guess was wrong; it only states the objective fact that I do not know the identity of the persecutors, without giving any information as to the validity of my guess. Which leads me to posit that my guess was correct.

MI5 Persecution Update: Friday 25 March, 1999

If You Intend To Reply, Please Read This

Please.... keep your response to one page if you can!. Faxes over a page or two will be deleted without being read.

The Usual Words

The persecutors-who-wont-admit-theyre-MI5 have been active again this week. On Saturday 20/3/99 I visited Ravenscourt Park in west London, and was verbally assaulted with the usual words, "something wrong with him". This audio file is on the web at URL;

This afternoon (Friday 26/March) I was again verbally assaulted while travelling by bus. The same sexual obscenity was thrown at me, and the incident was recorded on my minidisc-walkman. Because of the deeply offensive nature of the slander, I will not be posting this on the website.

Keith Hill MP (Labour - Streatham), my elected representative, as ever refuses to help.

MI5 Persecution : Browse Website

The March 1998 issue (number 42) of .net Magazine reviews the website describing it as an "excellent site". Since August 11, 1996 over 50,000 people have browsed this website.

You are encouraged to read the web pages which include

a FAQ (frequently asked questions) section outlining the nature of the persecutors, their methods of harassment through the media, people at work and among the general public

an evidence section, which carries audio and video clips of media and workplace harassment, rated according to how directly I think they refer to me

objective descriptions of the state security agencies involved

scanned texts of the complaints I have made to media and state security agencies involved

posts which have been made to netnews over the last four years on this topic

This article outlines what is to be found on the webpages, which you are encouraged to browse for the complete story.

Frequently Asked Questions

Your excursion through the website starts with the "FAQ - Frequently Asked Questions" portion. MI5s campaign of harassment against me has been going on for almost 9 years, and its longevity and breadth is reflected in the FAQ. Many thousands of people in Britain and abroad, including some recipients of this fax, have known for many years of MI5s activities against me. The FAQ describes the mass "Omerta suppressing its publication"; we pretend Britain is part of the "Free World", yet the British Secret Police, which is what MI5 are, carry on for many years a campaign which politicians and the media know about, and rely on the silent complicity of so many thousands of people.

The FAQs introductory article names those who are "in the know"; media figures like Martyn Lewis, Michael Buerk, entertainment figures like Chris Tarrant, politicians and many in the general public, "all united in a conspiracy which breaks the laws which the UK does have regarding harassment, and all completely uncaring for any semblance of decency or elementary respect for individual rights.

Broadcast media play a key role in the harassment. The very first incident in June 1990 was when a television newsreader reacted to what she saw happen in my living room at home; such incidents of "interactive television" are still happening in 1999. The same goes for radio stations such as Capital FM. In spring 1994, Chris Tarrant on his Capital morning show made an aside to someone else in the studio, about a person he didn't identify. He said, "You know this bloke? He says we're trying to kill him. We should be done for attempted manslaughter". Tarrant and Capital have made strenuous efforts to avoid answering this charge.

Perhaps worst of all, MI5 have deliberately set-up many incidents in public places such as tube stations, shops, cinemas, where they have paid people to throw abuse at me. Since MI5 obtains funds to the tune of 160 million a year to fund its criminal activities, it has funds both to pay its operatives and to "buy" media figures and members of the public to take part in its campaign of persecution.

The Security Service are professional liars. They throw slanderous abuse, yet they refuse to admit out loud that they are doing so. When challenged about their activities through the Security Service Tribunal they lie and deny their activities. They induce other workers and managers at places of employment to take part in their campaign of abuse, presumably by buying them in the same way they buy media figures.

Complaints, and Press Coverage (BBC Lies, MI5 Lies)

As you might expect I have challenged both the Security Service, through the Security Service Tribunal, and offending broadcasters, to own up to what they have been doing. And as you might also expect, all of these people have lied through their teeth. Still worse, they have refused to commit unambiguous lies on paper; they have couched their lies in bureaucratic language, and allowed others to make false assurances and tell lies on their behalf. So when their lies are exposed, they will then tell further Clintonesque lies about how they werent really telling lies in the first place!

On 6/Feb/1997 the BBC told me they would "never engage in any form of surveillance activity such as you describe". The BBC told me Buerk and Lewis had refused to put their lies in writing, but had stated verbal falsehoods denying my accusations of "interactive watching" during news broadcasts. Clearly Buerk and Lewis fear being caught and exposed, so they hide behind their Viewer Correspondence department.

In March 1997 I issued a summons against the BBC to try to "smoke them out". This summons was struck out as "disclosing no reasonable cause of action", because I had acted as a Litigant-in-Person and most LiP summons are treated thus. My case was arguable in law, so the striking out was unjust.

In June 1997 the Security Service Tribunal wrote to me regarding the complaint I had brought against MI5 in February. They say, "The Security Service Tribunal have now investigated your complaint and have asked me to inform you that no determination in your favour has been made on your complaint." I think you can guess the contempt which I feel for the Security Service Tribunal, who have never made a determination against MI5, and act as merely a whitewashing body for the Security Service. Unsurprisingly in May 1997 the Interception of Communications Tribunal gave the same result.

The last few items of "Press Coverage" give details of mentions of the MI5 Persecution in various magazines and newspapers such as BBCs Ariel, the Observer and .net magazine.

Evidence

Some audio and video clips of evidence have been recorded. My weakness in this area is because most of the really unambiguous evidence would have been obtainable in 1990-92, but I wasnt taping anything at the time, and its very difficult to now obtain recordings from that period.

The audio clip "Life is so Hard" relates to harassment at my workplace in Canada. In the latter half of 1996, I was sitting near to co-worker Mark Lee, who kept coming out with words and phrases which showed MI5 were supplying him with data from my home life. For example, I would say something on the telephone at home, and the following day he would repeat verbatim what I had said. When Mark Lee saw I was recording what he was saying, he started to make his remarks more ambiguous, or make the obvious ones out of earshot of the recorder.

However, during the evening of 12 November 1996, at home in my apartment (flat to you UK-ers), I said "life is so hard, and then you die". A nihilistic, negative thing to say, but quite distinctive. The following day, 13 November, Mark said loudly, "life is so hard eh, and then you die" followed by loud laughter. I captured this on my tape-walkman and the computer-audio file is posted on the website.

There are a number of other audio files in the websites "Evidence" area demonstrating the abuse to which MI5 subject me to through their paid agents.

Also in this section is a very interesting article by journalist Bernard Levin, which followed a meeting I had with a friend in 1991, and to my mind describes in some details Levins "artists impression" of the meeting. He talks about a "madman" who "bursts into tears, and swears it is all true. And it is."

Internet Newsgroup (Usenet) archive

From May 1995 until the present day, this matter has been discussed exhaustively on internet newsgroups. The most interesting articles from the first two years of posts are documented here. This area is worth reading since most of the questions which the reader would ask, have been asked at some time or another by someone on usenet. Perhaps the very first article posted sums it all up so succinctly;

Date: Thu May 4 18:27:24 1995
Newsgroups: alt.conspiracy
Subject: BBC's Hidden Shame

Remember the two-way televisions in George Orwell's 1984? The ones which watched you back? Which you could never get rid of, only the sound could be turned down?
Well the country which brought Orwell into the world has made his nightmare follow into the world after him. Since 1990 the British have been waging war against one of their own citizens using surveillance to invade privacy and a campaign of abuse in the transmitted media in their efforts to humiliate their victim.
And the most remarkable thing about it is that what they do is not even illegal - the UK has no laws to protect the privacy of its citizens, nor does it proscribe harassment or abuse except in the case of racial abuse.
A lot of people in England know this to be going on, yet so far they have maintained perfect "omerta"; not a sound, not a squeak has escaped into the English press, and for all the covert harassment absolutely nothing has come out into the public domain.
Have the British gone mad? I think we should be told.

So how much deeper will the persecutors-who-wont-admit-theyre-MI5 sink in their campaign of lies and intimidation? Each time I thought they could sink no lower, they have managed to surprise me. You thought it could never happen here? When the MI5 British Secret Police make their smears against me, it is the corruption of the Establishment, which they are part of, that is demonstrated.

MI5 Persecution Update: Friday 16 April, 1999

BBC newscaster Nicholas Witchell cant stop himself laughing

During 1990-91 there were very many instances of "interactive television" where newscasters and other TV presenters saw on a screen before them what was happening in my home, and reacted, frequently by laughing at me. During this period I unfortunately did not record these programmes. For the last year or two, I have been recording everything I watch, and there has been a drastic decrease in such incidents.

However, on occasion, television presenters do still engage in "interactive watching" and react to what they see. This has been evident with Jon Snow of Channel Four News recently - a particularly interesting case, since it has been established that he cannot be corrupted by money (it is well-documented that MI5 offered him a tax-free salary and he turned them down). I wonder what device MI5 are using to encourage him to do the "interactive watching"?

On Saturday 10 April 1999 at 7pm, Nicholas Witchell on BBC2 News reacted when he saw that I was watching the programme, and I have his reactions stored safely on videotape. I have watched this tape several times and I am entirely confident that my evaluation of his reactions is correct. For several minutes his upper lip quivered in mirth as he attempted to keep a straight face. Then finally his self-control evaporated through the excuse of a weak joke and his face collapsed into a grin.

The strange thing is that I dont know why he was laughing at me, what I had done recently to "deserve" to be laughed at. The MI5 persecutors usually manage to invent some justification as to why people should laugh at and/or abuse me ("hes an X", "it was so funny" etc), so Mr Witchell could have been laughing for any number of reasons. Perhaps he found the views I have been expressing in these articles amusing? I suppose if youre paid enough money and ordered to laugh then even the most innocuous thing becomes funny.

Jon Snow of Channel Four News cant stop himself smirking, either.

On 12 February 1999 I was watching Channel Four News presented by Jon Snow. As usual, I was recording the programme, so that if anything out of the ordinary happened, Id be able to go back and watch it again.

Now, Jon Snow, by his own claim, is uncorruptible. He says he turned down an offer of a substantial tax-free salary from MI5 - they wanted to make him their mouthpiece, and he told them where to get off.

So you will be most surprised to learn that Jon Snow "interactively watched" me that evening, and on many other evenings. Approximately fifteen minutes into the programme, he announced that the US President would be making a live appearance at about 7.30pm; I looked at the clock on the mantelpiece; and Snow saw me looking at the clock, and visibly tried to suppress a smirk.

Uncorruptible, are you, Mister Snow? If not money, then why are you watching me, Mister Snow? Are they forcing you to watch me? Cant you turn the monitor off, Mister Snow?

Keith Hill MP (Labour - Streatham), my elected representative, as ever refuses to help.

Comparing the MI5 Persecution with German "Final Solution"

It might seem offensive to compare the mass murder of millions of civilians in wartime with the peacetime persecution of merely one person. Yet the comparison has been coursing through my mind for several years now, because the brutality of German intent to "sub-humans" is very much comparable to the brutality of British intent to someone they vituperate and term "not up to British standards". The methods may differ, but the persecutors mindset is the same.

The Germans first targeted the mentally disabled, too

During WW2 millions of ethnic Russians, Poles, Jews, mentally ill, gypsies and other minorities were rounded up and murdered in purpose-built camps by the German regime, in the name of "racial superiority". Fifty years on, the British Secret Police, MI5, instituted a campaign of mass hysteria; but in their cowardice, limited their activities to one single victim.

It is instructive to note that the early German "cleansing" effort was directed primarily not at Jews, but at the mentally ill. The Nazis set up the T4 project in the thirties to "cleanse" away 70,000 mentally disabled people, including schizophrenics and epileptics. After WW2 the Jews with their media influence used the reaction from the holocaust to roll back anti-semitism in the Western countries; however, the mentally ill are today still a persecuted group in the modern Western world as they were under the Nazis (the current Jewish home secretary in the UK intends to bring in laws for incarceration without any criminal charge for some mentally ill people - he protects his own minority, but does nothing for the other minorities in todays society), and this continuing bias forms a central cause for the current acts of persecution in the UK.

Widespread knowledge of what is happening to the "un-British" minority

In both the German persecution of the thirties and early forties, and the current British persecution, many, many people are well aware of whats happening. There is widespread complicity through inaction of populace; and in a substantial proportion of the mainstread population, the persecution had/has widespread enthusiastic support; yet in both the German case in the 1940s and the British today, the existence of persecution is a mass secret which must be never admitted out loud. In the recent Lawrence case this "secret bigotry" has been termed "institutionalised racism", and that is a very good word for what the British are doing today The persecutory attitudes and omerta regarding them are so deeply ingrained in the national psyche that they define the national mood

During WW2 many Germans knew minorities were disappearing, and through inaction quietly condoned their government's mass murder of "un-German" minorities and inferior "foreigners"; and in the 1990s, similarly, many English people know what the MI5 British Secret Police have been doing, and not only condone it, but actively take part, because of xenophobia against the "un-British" unit minority that is the target of "British" actions. This attitude by the British persecutors has been made explicit through the words "he's not up to British standards"; the British seem to have found their very own "untermenschen" to victimise.

Why these obsessive "holy wars" happen

This type of aggression occurs when the majority is threatened or humiliated in some way, economically, militarily or culturally. In pre-WW2 Germany the threat was primarily economic and military, following Germany's humiliating defeat in the first world war and the reparations it was forced to pay. In modern Britain, one might guess that the majority English who are behind the persecution feel pressured by the swiftly diminishing status of Britain in the world, and the rapidly increasing coloured colonisation of their country, which in time will see the ethnic English a minority in their own land, and their more antisocial elements, unable to reply to the obvious threat, instead project their aggression onto another, weaker, unit minority

In both cases there is a whiff of "holy war" or irrational obsession with the persecution. Certainly the German behaviour fifty years ago bordered on the not-quite-sane, and the current British behaviour towards their chosen victim is strongly tinged with a leave-taking of reason. And the choices open to the victims are the same, since MI5 will never allow me to escape them, "if he tries to run away we'll find him", just like the commandant of Auschwitz telling the new arrivals, "the only escape is through the chimney".

The Victim Will Destroy Us if We Dont Destroy Him First

The persecutors propaganda is the same. Fifty years ago the Germans said, "if we don't do it to the Jews then the Jews will do it to us"; and MI5's propaganda in the early nineties concentrated on their victim as a "monster" aesome "untermenschen" minority.

"We are decent fellows" say the Brutal Persecutors

During the course of researching this article I read part of the very interesting book, "Hitler - A Study in Tyranny", by Alan Bullock. This volume contains a quote from Himmler on the "Final Solution";

"Most of you know what it means when a hundred corpses are lying side by side, or five hundred or one thousand. To have stuck it out, and at the same time .... to have remained decent fellows, that is what has made us hard. This is a page of glory in our history which has never been written and is never to be written."

In the MI5 persecution, too, there is a thread of deliberate brutality to the sick and vulnerable, while the persecutors maintain that "we are decent fellows". There is almost a conscious schizophrenia in the self-attitudes of the Security Service operatives and those in the public who they employ against me, which reflects the contradiction evident in the German attitude above. On the one hand, they stoop to the lowest and most base behaviour; yet at the same time, the MI5 operatives tell themselves that since they are civilised British people, then surely they must by definition be "decent fellows". Any indecency is made the fault of the victim; "hes making us persecute him, so we need feel no guilt".

Yet the conduct is atypical of the way these peoples see their normal modes of behaviour. Befslaughter was not typical of normal German behaviour up to that point. Similarly, the current MI5 abuse goes against the grain of British self-image as being "reserved" and "decent", since they are using terms of abuse which are common among blacks and other supposedly less-developed races, but not among the English.

Conclusion

The ultimate aim of both persecutions is the humiliation and physical extinction of the persecuted group. The Germans did this in a very direct way; the British Secret Police MI5 are acting indirectly and relying on self-extinction of their target, because in peacetime and in the current somewhat false climate of "political correctness" more direct methods are impossible. If MI5 undertook more direct action the mass "omerta" would be broken.

I have written this article with sincerity to show how a historically recent persecution in another country parallels what is being done in this country today. In both cases, the evil-doers are of their countries establishments, and rely on widespread tacit support to maintain the persecution and omerta around it. While the holocaust was undoubtedly the greater evil, it is important to be aware of the fact that had the Germans not been defeated fifty years ago, their plans would have gone through to total completion. In Britain today no force threatens the "permanent government" of which the Security Service forms a part; and it looks very unlikely that the wrongs perpetrated by the MI5 secret police will ever be revealed to public view, and the British secret state brought to justice for its evil actions.

Please.... keep your response to one page!. Faxes over a page or two will be deleted without being read.

Somewhere between 0 and 100%

The last few days there have been no clear recordable instances of abuse. However, while travelling on the Underground, while walking around near my home and going to friends homes, I am constantly troubled by thoughts that those people over there might be about to get at me; that the couple sitting in the opposite seats laughing are in fact laughing at me; et cetera, et cetera.

A comment by a scientist to the BSE inquiry sticks in my mind. He described the possible scale of the epidemic as "between 0% and 100%". It might not be happening, it might not happen at all, to any discernable degree.... or it might be total. Without clear recording, which seems to have become impossible the last couple of weeks, there is no way of knowing whether the harassment really is continuing, whether we have entered a temporary hiatus, or whether perhaps it has perhaps stopped for now.

But for the time being I think there arent any reasons to dicontinue these faxes. I only re-started them six weeks ago in response to a resumption of MI5 harassment; and I think I will need to be more convinced of absence of persecution before I discontinue my complaints.

The Newscasters are still watching

In the last few weeks there have been at least a couple of fairly overt instances of "interactive watching" by newscasters. I reported this in a previous "MI5 Persecution Update".

These instances are really very rare compared to 1990-91, when there were many dozens of such occurrences. Undoubtedly the reduction is due to my practice of videotaping everything I see. Recently I had the opportunity of showing this years "happenings" (Jon Snow/Nicholas Witchell) to my psychiatrist, and he agreed that in both cases the newscasters were expressing merriment without visible cause, and that objectively it might be possible for my claims to be true - although of course other people reported similar thoughts to him, and this thinking is usually a symptom of illness.

Read About the MI5 Persecution on the World Wide Web

The March 1998 issue (number 42) of .net Magazine reviews the website describing it as an "excellent site". Since August 11, 1996 over 50,000 people have browsed this website.

You are encouraged to read the web pages which include

a FAQ (frequently asked questions) section outlining the nature of the persecutors, their methods of harassment through the media, people at work and among the general public

an evidence section, which carries audio and video clips of media and workplace harassment, rated according to how directly I think they refer to me

objective descriptions of the state security agencies involved

scanned texts of the complaints I have made to media and state security agencies involved

posts which have been made to netnews over the last four years on this topic

Keith Hill MP (Labour - Streatham), my elected representative, as ever refuses to help.

MI5 Waste Taxpayer Millions on Pointless Hate-Campaign

Recently I was talking to an independent observer about the nature and purpose of the perceived campaign of persecution against me. The person I spoke to, a highly intelligent man, said he was struck by the utter pointlessness of the perceived campaign against me. He also said that, if my theories were in fact true, many people would have to be involved, in the surveillance itself, and in the technical side of the delivery of information from my home to TV studios for example, if the "interactive watching" were happening as described. He voiced these thoughts without any prompting from me; but both I and other observers had arrived at pretty much the same conclusions, some years ago.

I saw a team of four men at Toronto Airport in 1993

To carry out the surveillance alone, full-time, would employ four or five men, or their equivalent in terms of man-hours. Each man would "work" an eight-hour shift, so you would need at least three men doing the surveillance, plus a connecting link / manager. An indicator that this estimate is correct arrived in 1993, when I was accosted by one of a group of four men at Toronto Airport; he said, laughing, "if he tries to run away well find him". Plainly these were the men who had been involved in the intrusive surveillance of me for the preceding three years.

On other occasions, I have seen the same man on two or three occasions. On one such occasion, at Ottawas Civic Hospital in November 1996; he gave his name to the doctor as "Alan Holdsworth" or some such; my hearing is not very good sometimes and I am not sure of the surname, although I am sure "Alan" was his first name. I saw exactly the same man again in Ottawa, at the airport, in July 1998. Obviously, other people must be "working" with this person; he would not be the sole agent employed in this case.

Usenet readers views on the Cost to MI5 of Running the Campaign

Here's what a couple of other people on internet newsgroups / Usenet (uk.misc) had to say regarding the cost of running such an operation...

PO: >Have some sense, grow up and smell reality. What you are talking about
PO: >would take loads of planning, tens of thousands of pounds and lots of
PO: >people involved in the planning, execution and maintenance of it. You
PO: >must have a very high opinion of yourself to think you are worth it.

and......

PM: >But why? And why you? Do you realize how much it would cost to keep
PM: >one person under continuous surveillance for five years? Think about
PM: >all the man/hours. Say they _just_ allocated a two man team and a
PM: >supervisor. OK., Supervisor's salary, say, #30,000 a year. Two men,
PM: >#20,000 a year each. But they'd need to work in shifts -- so it would
PM: >be six men at #20,000 (which with on-costs would work out at more
like
PM: >#30,000 to the employer.)
PM: >
PM: >So, we're talking #30,000 x 6. #180,000. plus say, #40,000 for the
PM: >supervisor. #220,000. Then you've got the hardware involved. And
PM: >any transcription that needs doing. You don't think the 'Big Boss'
PM: >would listen to hours and hours of tapes, do you.
PM: >
PM: >So, all in all, you couldn't actually do the job for much less than
PM: >a quarter million a year. Over five years. What are you doing that makes
PM: >it worth the while of the state to spend over one and a quarter million
PM: >on you?

Those are pretty much the sort of calculations that went through my head once I stopped to consider what it must be costing them to run this operation. At the very least, a quarter million a year - and probably much more, given the intrusive and human-resource-intensive methods employed. Times nine years. Equals well over two million pounds - and probably much, much more.

Its wasteful for someone with my skills to be unemployed

The wastefulness of the MI5 campaign against me is not just that of futile expenditure on their side. It is also extremely wasteful for someone with my talents to be unemployed and on a disability pension. I am highly qualified in numerate disciplines, yet am unable to work, specifically because of the MI5 hate-campaign against me. It is a terrible waste of resources for a supposedly efficient economy like that of the UK to be squandering the talents of a skilled and capable worker.

I made every effort to remain in employment for as long as I could, but ultimately I was defeated by MI5s employment of massive resources specifically targeted on my workplaces with the sole aim of seeing me evicted from those workplaces. You might expect this sort of behaviour from the Stasi or some other secret police force in a communist country where labour is cheap, and the governments aim on seeing its citizens confined; but for a supposedly free and efficient economy like Britains, the wastefulness resulting both directly and indirectly from the Security Services activities is simply criminal, and should never be allowed.

The international dimension means the costs are multiplied many times overoer had any sense, then they have surely taken leave of them over the last nine years.

Four years of persecution in Canada

The persecution re-started within less than five minutes of my arrival in Canada, as documented above, and in the "frequently asked questions" article on the website. The words, "if he tries to run away well find him" spoken by one of the harassers at Toronto Airport are now imprinted on my mind.

A year later I emigrated to Canada, intending to find a job and settle there, hoping that MI5s interest in me might dim with time. I did manage to find work there, but my hopes of avoiding Security Service interest were ground into dust. As detailed above, I saw the same man in November 1996 and July 1998, both times in Ottawa. Apart from these encounters, there were numerous incidents between 1994 and 1998 of harassment, of an identical nature and in most cases using identical words to what had occurred in the UK. It became quite clear to me that the permanent surveillance and harassment operation which MI5 had subjected me to in England was being continued.

For a team of four or five men to be employed overseas must cost a lot more than if they operate in their home country. And for MI5 to continue the operation for a period of over four years, continuously, must cost many hundreds of thousands of pounds. This confirms my belief that the state is funding the campaign against mehat the Security Service receives current annual funding of #160M. Divided by 1850 staff, works out at #86,000. But the unit annual cost of each "watcher" must be much higher than this, especially given the frequently mobile and overseas nature of their actions of the last few years. A very conservative figure might be a little over #100,000 pa for each of a team of five people, or half a million pounds per year. For nine years, so far. So the most conservative estimate of the surveillance element alone is perhaps four or five million pounds since 1990.

This guesstimate is of course theoretical - I am not privy to inside details of how MI5 split their funding. But to take some other examples, the cost of a US counter-surveillance specialist per day is USD 5,000. Even if the agents permanently assigned to me are not of this calibre - even if they employ specialists when difficult work planting bugs etc is encountered - their salary and support costs must still be very high. The individual agents are doing well for themselves as they are well-paid to exercise psychopathic instincts which in any sane society would see them in prison; but the taxpayers who must fund this terribly wasteful exercise are being "done" out of hundreds of thousands of pounds each year.

It must be emphasised that the above estimates are highly conservative. Besides the surveillance operation, it must carry a high cost in man-hours to propagate covert slanders through the population; to setup and maintain the "interactive watching" links to TV and radio stations, which these organisations continue desparately to "lie and deny"; and to induce antipathy in co-workers which would not otherwise exist.

Why they are wasting Millions of Pounds on a "Nobody from South London"

As remarked in the prologue to this article, it is really most extraordinary that the Security Service spends a chunk of its budget, every year for nine years so far, on a meaningless campaign against a "nobody from South London". That they are spending such a large amount of money has been confirmed to me on several occasions, usually by oblique references to "its costing this country millions". The supposed "logic" behind the persecution is that MI5 wish to avoid their harassment of me, and the involvement of the UK media, to be made public; yet as the reader will appreciate that is a circular argument, "theyre doing it because they want to keep it secret and avoid humiliation for themselves and their country" begs the question, "why did they start doing it in the first place?", to which in truth I myself do not know the answer.

Plainly MI5 with its rich budget can afford half a million pounds a year to waste on a "nobody from South London". Some time ago I was talking to a British surveillance professional on Compuserve who told me "this work costs a lot of money and is usally because the person I am following has done something (usually criminal) to warrant all this money and time being spent." Yet in this particular case it is plainly not the "victims fault" that the harassment is taking place. The hate-campaign against me is completely the creation of the obsessive psychologies of the MI5 agents who have made themselves my persecutors; it is obviously a "personal" campaign for them, and for years they misuse taxpayer funding to feed their insane, unnatural and fixated fantasies.

Four Years of "MI5 Persecution" Posts on Internet Newsgroups

For approximately the first three years of the MI5 persecution, from June 1990 until late 1992, I kept as quiet as possible, in the hope that by not reacting, MI5s interest in me would decrease and they would simply go away of their own accord. This is the sort of behaviour some people employ against bullies; if the bullies arent getting a reaction, then they might simply go away and victimize someone else.

Unfortunately, this tactic didnt work. The quieter I became, the more shrill and hysterical the noise from the Security Service operatives. For about two years I didnt watch TV news at all. Yet this only heightened their obsessed fixation; they continued to follow me wherever I went, they continued to induce harassment at work by managers and fellow workers, and they continued to encourage me to commit suicide. They seemed to regard my refusal to react as a crime which they would have to "put right" by ever more extreme forms of abuse.

Finally, in 1995, I changed tactics radically. Since late 1994 I had had accounts with internet providers in Ontario, Canada. I discovered the cornucopia of internet newsgroups, on every topic from consumer electronics, to politics and legal topics, and I discovered online services such as Compuserve and AOL. In May 1995, I made the first posting to the conspiracy newsgroup, on the subject of "BBCs Hidden Shame".

BBC's Hidden Shame

The internet newsgroup discussion, which has now reached its fourth anniversary, started with an article in alt.conspiracy, which I reproduce here.

Date: Thu May 4 18:27:24 1995
Newsgroups: alt.conspiracy
Subject: BBC's Hidden Shame

Remember the two-way televisions in George Orwell's 1984? The ones which watched you back? Which you could never get rid of, only the sound could be turned down?

Well the country which brought Orwell into the world has made his nightmare follow into the world after him. Since 1990 the British have been waging war against one of their own citizens using surveillance to invade privacy and a campaign of abuse in the transmitted media in their efforts to humiliate their "victim".

And the most remarkable thing about it is that what they do is not even illegal - the UK has no laws to protect the privacy of its citizens, nor does it proscribe harassment or abuse except in the case of racial abuse.

A lot of people in England know this to be going on, yet so far they have maintained perfect "omerta"; not a sound, not a squeak has escaped into the English press, and for all the covert harassment absolutely nothing has come out into the public domain.

Have the British gone mad? I think we should be told

At this point, I did not name MI5 as my persecutors. I was still unsure that they were the ones responsible for the "psychological terrorism". In followup posts however I did name them; and the persecutors have never denied the claim; so I think my guess is valid. (The Security Service Tribunal in 1997 have said "no determination in your favour was made", but it is a well established fact that MI5 lies routinely to the Tribunal which has never found in favour of a plaintiff, so no conclusions can be drawn from this.)

This first post was made to alt.conspiracy, but further posts were made to the UK-local newsgroups, in particular uk.misc but also uk.legal and uk.politics (which is now called uk.politics.misc). Some time ago I tried to take the battle to the Compuserve forums, UKPOLITICS (which is now called UKCURRENT - current affairs), but my articles were censored by the forum operators. Such censorship is impossible on the internet newsgroups.

Police Refuse to Act

I have complained several times to the Metropolitan Police, who have each time refused to help.

Subject: Re: MI5 Persecution: Why Aren't the British Police Doing Their Job?
Reply-To: Green@guidion.demon.co.uk
Date: Sun Apr 7 21:13:30 1996

In article <DpIE0r.736.0.bloor@torfree.net>
bu765@torfree.net "Mike Corley" writes:

>Last Easter (1995) I went into the local police station in London and spoke to
>an officer about the harassment against me. But I couldn't provide tangible
>evidence; what people said, in many cases years ago, is beyond proof, and
>without something to support my statements I cannot expect a police officer to
>take the complaint seriously.

This in itself dos not suggest that the police have it in for you. The old bill operates on extremely tight spending limits forced on them by that pillock Michael Howard, and without evidence, they often have higher priorities than chasing something that cannot go to court.

I doubt that the police are actually being leant on, but they probably realise that if they looked into this, they would be leant on hard. The met always stays away from anything that looks like it has Defence, Security or secret service interest already, because they realise that they are below these government agencies in the general pecking order.

If I walked into my local nick and complained that MI5 were snooping on me, they would show me the door without even looking at my evidence, because that bored desk seargant with only five years to go before he retires doesn't want to start fucking about with somebody who has incurred the wrath of Stella Rimington. He would rather deal with the lost dogs and driving licence producers, eat his cheese and pickle sandwiches and piss off home at the end of his shift than have some high ranking spook having a go at his boss and getting him a bollocking.

In short, you have earned much sympathy but little surprise. Just remember that saying
about the enemy of your enemies.

Most recently, I wrote in March 1999 to Charing Cross Police Station CID. They did not acknowledge or reply to my letter. When I phoned them up, the detective Id written to treated me to a sadly not unusual display of police bigotry, with an uneducated rant about "your paranoid rubbish".

It would be nice to think that such uneducated bigotry is something other than wholly typical of police behaviour, but unfortunately that is an illusion that is rapidly dispelled.

Uncorruptible Jon Snow of Channel Four News

From previous articles the reader will know what I think Jon Snow has recently been watching me while he reads Channel Four News in the evening. Recently I digitized a few moments of one such broadcast, where his face twists into a smile, without there being anything in the news broadcast to cause merriment. Here is a usenet post from some time ago on MI5s "bought and paid for" tools in the so-called "free" press.

Peter Harding (harding@ermine.ox.ac.uk) wrote:
: I was at speakers' corner on Sunday. There was one chap who was bellowing
: about something or other, I don't know what, but one thing he said to
: someone caught my ear:

: "BBC, MI5, same thing."

Can't disagree with that sentiment.

Wasn't it documented that MI5 sometimes "bought" journalists and broadcasters? I remember reading a report by some jouralist who had been offered an extra tax-free income by MI5 to become their covert mouthpiece, and had refused.
....
> : >mouthpiece, and had refused.
> :
> : It was Jon Snow of Channel 4.
>
> Was it reported in any of the papers?

It has been reported several times. The most recent was in Private Eye, a few months back. As I recall they also wanted information from him; journalists would be a natural choice for members of the Security Service and the Secret Intelligence Service for information sources.

> It might be interesting to see what he had to say regarding their
> attempt to recruit him.

He was most concerned that many others would have accepted such an offer. However, we can probably make an educated guess as to some of those who accepted: Nigel West (Rupert Allason, MP) and Chapman Pincher would come near to the top of the list.

Corrupt Security Service agents steal millions from taxpayers

Money is of course a factor in the grand equation which is the MI5 persecution. It costs money for the Security Service to "buy" people in the media etc. But that is only a small part of their expenditure of taxpayers resources. Most of the expenditure is directly on the salaries if the agents involved; and in this post I put forward the theory that MI5 are trying to draw out their involvement for as long as possible, very cynically, to maximise their income and line their own pockets.

At each stage they have tried to pretend that I am something out of the ordinary. Either I was very stupid ("he's an idiot") or very clever ("he's like a genius"). Either I was a threat to Western civilization (Levin once referred to me as the next Hitler) or I was completely defenceless ("a soft toy").

Now, it should be obvious to any person with common-sense that I am not out of the ordinary in any way. I have an IQ which is average for the Web, I am racially white European, and there are plenty of other people with schizophrenia or epilepsy out there who haven't been targeted for MI5 attention, so why me?

I think the answer is that the MI5 agents who harass me have cynically exploited the situation by painting me as extraordinary in order to assure themselves of well-paid employment funded by the ordinary British taxpayer. To put it bluntly, they are stealing millions of pounds from the taxpayer to feed their own pockets.

This assertion is supported by the observation that it's the same agents who are doing the harassment. Six months ago in a local hospital I was harassed by someone whose face I had seen (he had stared straight at me aggressively, at the time I just thought it was some nutter but it turns out he was one of "them") aboard a KLM flight a couple of years ago. It's presumably been the same people most of the time. I've seen the way contractors act when they don't want their positions terminated. Would these agents really want to lose their well-paid employment harassing me? Presumably they are promising their bosses a "breakthrough" (ie my demise) real-soon-now and have been for the last seven years, while all the while these MI5 agents skim millions off the taxpayer.

I wouldn't mind a job like that. Perhaps if I persecute myself a little bit, like standing in front of a mirror and shouting mindless obscenities, do you reckon I'd get a slice of the caky Service Tribunal. This year Nick Brooks, current Tribunal Secretary, confirmed to me that he could not think of a single case where the Tribunal had found in favour of a complainant. Here is my usenet post from two years ago.

Subject: MI5: "It wasn't us"
Newsgroups: uk.misc,uk.legal
Organization: Toronto Free-Net

"The Security Service Tribunal have now investigated your complaint and have asked me to inform you that no determination in your favour has been made on your complaint."

Signed ER Wilson, Tribunal Secretary

Well that's a relief then. All that spamming for nothing eh. Gaw blimey, if they say they're not doing it then it can't be them, can it?

In a recent letter to Mr Brooks I expressed the opinion that the Tribunal were unable to fulfil their responsibilities in the face of MI5 falsehoods. Nevertheless, I do intend to make another complaint to the Tribunal in the near future, despite the Tribunal appearing to be a toothless watchdog.

Discrimination against a Unit Minority

MI5 have been very clear in their instructions as to what I should do. They have openly shouted at me the word "suicide", and also from the other abuse it is clear that they want my existence terminated.

This point is covered in more detail in a previous article. The following post describes the xenophobic nature of MI5s campaign against me. They have refined their bigotry down to a unit minority, yet they make use of the discrimination against the mentally ill which is a feature of current British society.

>Indeed. If you've ever had a 'conversation' with someone suffering
>from florid schizophrenia, you'll know how difficult it can be to
>'argue' with them.

I don't have florid symptoms. But I'm in a difficult situation, because those people who don't know, aren't going to believe, and those who do, they just go along with the crowd. It's never a good idea to go against the grain, and the grain here is defined by interests in the establishment and the media. Even people who could say out loud what was happening won't, because then there's a risk that they'll be seen as traitors and ostracised.

Usually this type of 'hidden abuse' is racial and targetted at a racial minority within a country. You keep the minorities out of the good jobs, but you don't admit discrimination exists. It happens everywhere, not just in Britain. The persecution that is going on now is in reality a refined form of racism. Instead of "nigger" it's "nutter", and abusing the mentally ill is still socially acceptable today. In 50 years it might not be, but today there isn't any social or legal sanction against it.

So really they've refined racial harassment down to a minority of one. The words may be different, but the methods are the same.

MI5 Persecution: BBC Newscasters Lie & Deny They're Watching Me

Central to the persecution campaign waged against me for some nine years now by the Security Service is their use of the media, and in particular the broadcast media, to make clear to me that I am under surveillance and being watched within my own home, even by BBC newscasters while they read the news. This is really an act of arrogance; MI5 and their tools in the television and radio are so sure that they can never be caught, that they have many times made explicity clear on broadcast programmes that they are as capable of seeing me as I am of seeing the broadcast pictures. Even when they have known I am taping the programmes they still carry on this practice; for examples of TVand radio presenters caught "in action", see the Evidence area of my website.

If you wish to reply to this article......
then please include your name and fax number! I provide the means for recipients to send me their thoughts on the topics discussed, but ask that you provide me with your fax number or email address if you require a response. Also would you please send not more than one or two pages, if by fax. Thank-you!

It started with a Newscaster, and it continues with Newscasters today

The very first incident in the story started with a reaction by an ITN newscaster, Sue Carpenter, in June of 1990, almost nine years ago now. She reacted to what she saw in my living room at home as she read the news. My mother had brought an apple for me into the room, whereupon the newsreader smirked and giggled, apparently finding this funny. I couldn't believe what I was seeing. I carried on watching news and other television programmes to see if presenters would show signs of "interactive watching"; to my surprise, this happened again and again. Unfortunately, I did not have my wits sufficiently about me to videotape these programmes, and it is now almost impossible to obtain recordings dating back to 1990.

However, I have been busy recording everything Ive watched the last couple of years, and the taping has yielded some nuggets, which you will find if you point your Web browser at the "evidence" area of my website, whose URL address is given above. Strangely it is not particularly the BBC who are "after me" at the moment (with the exception of occasional fire from Nicholas Witchell), but that supposed paragon of virtue and decency Jon Snow of Channel Four TV News (he actually works for ITN), who once claimed hed turned down MI5s offer of a tax-free salary. I will cover Snows recent actions in a future article.

BBCs Hidden Shame

The first ever Usenet post (internet newsgroup article) on the subject of the MI5 bugging / BBC watching occurred, as stated in a previous article, in early May 1995. It is reproduced here;

Date: Thu May 4 18:27:24 1995
Newsgroups: alt.conspiracy
Subject: BBC's Hidden Shame

Remember the two-way televisions in George Orwell's 1984? The ones which watched you back? Which you could never get rid of, only the sound could be turned down?

Well the country which brought Orwell into the world has made his nightmare follow into the world after him. Since 1990 the British have been waging war against one of their own citizens using surveillance to invade privacy and a campaign of abuse in the transmitted media in their efforts to humiliate their "victim".

I suppose "BBCs Hidden Shame" is more of a wish than a fact. It may be hidden, but the BBC and other media and security organisations seem to have no shame whatever in their anti-social, not to say criminal, actions. Nor do the general public, who seem quite happy to parrot the vilest obscenities without much hesitation or apparently thought.

Martyn Lewis, Nicholas Witchell and the rest

Most of the harassment occurred in 1990-92, when I wasnt making any recordings, and the BBC wont release copies of current affairs programmes from that period.... so although I can remember there were many incidents in that time, even many specifics, I cant dig up the actual programmes to flesh out the bones.

This year, there has been at least one incident with Nicholas Witchell as newsreader, which I have successfully recorded and digitized, i.e. converted into a computer Quicktime movie file. This has not yet found its way onto my website (Im a busy man, dontcha know) but you can be sure I will let the readership of these articles know when that clip makes it onto the web. The Witchell clip was recorded on Saturday 10 April 1999 at 7pm, and shows Witchell trying to restrain his features from collapsing into a smirk. First his upper lip quivers for several minutes, then with the non-excuse of a non-joke his entire face twists into a grin. It looks as if he finds me so funny, that he allows himself to submerge any pretence at professionalism in a sea of MI5-inspired sarcasm and harassment.

The two BBC newscasters whose reactions to me I can remember most vividly over the years are Martyn Lewis and Nicholas Witchell. I can remember thinking years ago that Michael Buerk was also seeing me at home; and if the other two are watching then there would be no reason why he wouldnt be doing the same; but in all honesty I cannot remember a single clear instance of his reacting through facial or verbal expression to me.

I can remember several instances of Martyn Lewis reacting to what he saw of me, however. In early 1992 I was watching the BBC news with Lewis on a small black-and-white portable TV at my then home in Oxford. I threw a term of abuse at Lewis; he flinched, then gave a grin and made a comment from which I understood that he had been on my side, but might have changed his mind as a result of what Id just said to him.

And in spring 1991 I remember Martyn Lewis clearly reacting to what he saw of me at my then accommodation in Woking, Surrey, by continuing to stare at some fixed point near the camera after the news had finished - presumably this is where the monitor interactively showing pictures of my room was located.

Why would BBC and other Newscasters Watch and Harass Me, Watching Them?

This is a very difficult question, and I dont actually know the answer. It is a matter of record that the Secret Services are very much part of the Establishment. The recent exposure of the "MI6 Agent List" on the internet, and its coverage in the newspapers, reveals how much MI5 and MI6 are recruited from the ranks of the Establishment. Obviously the relationship is bi-directional; the Establishment influences MI5/MI6, but the secret services (well, perhaps not so secret now we know who works for MI6!!!) also influence the machinery of power and information dissemination i.e. media in this country. So they must have a lot of covert leverage with the BBC and ITN.

Some of this leverage is obviously through bribery. It is a matter of record that MI5 tried some years ago to "buy" Jon Snow of Channel Four TV. He turned them down - obviously they must have approached other media people as well, and from the lack of other reports of people turning them down, it may be presumed that some other journalists will have accepted the sugared carrots put before them. Ironically, Jon Snow has been taking part in the recent "watching" actions against me - but why he has allowed himself to be used by the secret services is something which I do not know.

Perhaps the Security Service uses blackmail to twist arms of journalists into co-operating with them? I have always thought there was something slightly odd about Martyn Lewiss demeanour. At the time of the Ron Davies "rough trade" scandal it was reported that MI5 had known all about Davies predilections and the sham of his pretence to be a happily married man. Perhaps MI5 have been able to dig something up from Martyn Lewiss private life to blackmail him into acting on their behalf? And if there wasnt anything before the "newscaster watching" started then there most certainly is something now.... once theyve started watching, the newscasters will surely wish their activities to remain covered-up, and co-operate with the security service.

"Newscaster Watching" Deliberately Constructed to Mimic Schizophrenia

Presumably this is the first case in history of television journalists actually taking part in acts of real-time, live spying and reacting against one of their viewers. What you have to understand, though, is that I was quite mentally healthy in June 1990, certainly relative to November 1992, when after two and a half years of harassment I was finally admitted to hospital as an out-patient. MI5 decided from the outset that they would make me mad; they constructed the media harassment to resemble what would be reported by a person with mental illness; and then they carried on years of abuse to inflict on me the condition which they wished to use as an excuse to cover up their abuses.

I sold my portable TV in autumn 1990 and stopped watching television regularly. I realise now that this may have been a mistake. What I should have done was to watch TV and listen to the radio, but tape-record everything and make a note of what each excerpt meant to me. I would then be in a much stronger position as regards to evidence that I am now. That is what I am trying to do now, but unsurprisingly the TV/radio presenters have stopped getting at me, now they know they are being recorded.

When I started publicising my case on internet newsgroups in 1995, I was met with the disbelief one might expect to be accorded to a mentally ill person who talks about "newscaster watching" and media persecution. Some newsgroup participants thought I had started a "troll", an invention made to obtain a reaction; one bright spark even suggested a group of psychology students were behind the articles. But most people thought the articles were symptomatic of derangement - and that is exactly what MI5 want people to think. MI5 chose me as a target because I was mildly mentally ill at the outset in 1990, although I stress my illness then was very mild in comparison with November 1992, and because they knew that enough abuse would (a) make me much more seriously ill, and (b) once I was more ill, they would "get away" with a harassment deliberately constructed to look like the symptoms of paranoid schizophrenia.

Martyn Lewis Denies & Lies, But Wont in Writing

In February 1997 I wrote to BBC Viewer & Listener Correspondence and asked them to investigate the claim that their newscasters had engaged in "real-time spying" on me. They replied that they had asked Martyn Lewis and Michael Buerk whether they had engaged in such practices, and that they had both made verbal denials to VLC, but were refusing to put their denials in writing.

To me it looks as if Lewis and Buerk are happy to lie verbally but not in writing, because written falsehoods would place them unambiguously in the wrong, whereas they can try to talk their way out of verbal lies if they are ever caught, or perhaps even deny the verbal lies completely? If they lie without shame, then why would they have any shame about future lies about lying?

BBC-VLC also said that the BBC "would never engage in any form of surveillance activity" such as that described. Clearly Martyn Lewis and the rest have lied to their own organisations personnel about their criminal actions. So much for the "objective", "truthful" BBC, a nest of shabby liars.

Summons against the BBC, for Nuisance caused by Newscaster Spying

In March 1997 I issued a civil summons against the BBC, seeking injunction against further "newscaster spying", and token damages for what the BBC had done to me until that date. The purpose of the summons was to try to "smoke out" the BBC, since obviously I did not have good evidence which would be necessary for either a civil or criminal case to be made against them. My summons was worded as follows;

1. The plaintiff is and was at all material times residing at [home address]. At some time prior to or during June 1990, persons of unknown identity entered Plaintiff's premises and installed concealed television equipment in said premises.

2. A campaign of harassment was launched against the Plaintiff by the persons of unknown identity, which in part took the form of instigating harassment by BBC TV newscasters (including specifically Michael Buerk and Martyn Lewis) as they read news bulletins, by making direct and personal comments to Plaintiff.

3. The campaigns purpose was to subject Plaintiff to great mental stress and induce mental breakdown. As a result of it Plaintiff did indeed suffer from severe mental strain in 1990-97.

4. In order to avoid the mental strain being caused to him the Plaintiff has been compelled to stop watching BBC TV news. Defendant therefore committed the tort of private nuisance, since normal use of home was interfered with.

5. Plaintiff claims a permanent injunction prohibiting further nuisance, and damages for nuisance suffered limited to 5,000.

Naturally, my attempt to smoke-out the BBC and its lying newscasters failed. The BBCs litigation department sought to have my summons struck out; and they succeeded in doing so, on the grounds of my action "disclosing no reasonable cause of action". I was also prevented from issuing further civil claims against the BBC without leave of the Court. Apparently litigants-in-person frequently / usually have their claims struck out with this wording, regardless of the merit of their claims.

BBC Suppresses my Claims of "Watching by Newscasters"

BBCs staff magazine Ariel ran my advert "BBC Newsreaders Spying on my home" for one issue in the Personal category on 8/July/1997 before it was spotted and axed by editor Robin Reynolds; please see webpage; http://www.pair.com/spook/evidence/plaint/ariel.htm
Clearly the BBC will not allow claims of its wrongdoing to be made public in the media channels it controls.

On several occasions people said to my face that harassment from the TV was happening. On the first day I worked in Oxford, I spent the evening in the local pub the Rose and Crown with the company's technical director

Ian, and Phil, another employee. Ian made a few references to me and said to Phil, as if in an aside, "Is he the bloke who's been on TV?" to which Phil replied, "Yes, I think so".

The reader might think that mere "watching" by newscasters etc might be a relatively benign happening. But it is not; it is part of MI5s framework of harassment and lies. On many occasions the reactions of the BBCs newscasters to me has been in the nature of sarcasm, implicit contempt and abuse. This is visible in Witchells news programme mentioned above, where he engages in abuse by laughing at me during his newsreading. It was particularly visible in the early period of 1990-92, and as late as Autumn 1993, when during a Newsnight broadcast Jeremy Paxman interviewed a football person about soccer hooliganism, and the interviewee gave vent to an unsubtle rant about "theyre idiots, theyre just idiots, keep up the surveillance". Paxman started grinning, showing he understood and was taking part in the abuse being perpetrated on that programme.

Conclusion

The MI5 Persecution started with harassment by television newscasters, and today harassment by TV and radio presenters still forms a key part of MI5s activities against me. When this business started in June 1990 I was in relatively good health of mind. Years of persecution by the secret police and their mouthpieces in the state-run BBC and other media eroded my health until MI5 achieved their aim of seeing me rendered mentally ill in November 1992. The diagnosis which was forced on me unfortunately and ironically meant that my reports of the harassment are disregarded, because the mentally ill are second-class citizens in todays Britain.

Yet TV and radio harassment continues, albeit in a reduced form, despite my taping all the programmes I watch, resulting in my being able to obtain and demonstrate objectively on the website instances of media presenters attacking me. Unfortunately these recorded instances are quite tenuous; I might understand them, the presenters understand what it is theyre doing, but despite many thousands of people knowing the truth of the "newscaster watching", the omerta continues and they continue to refuse to admit the truth of the matter. It is a terrible indictment of British society that there is not even one decent person willing to speak out. I look forward to the day when the truth does finally emerge, and the mass corruption which has allowed the MI5 persecution to take place is finally purged and the Establishment criminals caught and appropriately punished.

MI5 Persecution: Molestation during Travel

MI5s persecution of me varies in intensity. Since 1990 it has been steady for perhaps 80% of the time; there was a notable quiet period in 1993, and another quiet period in Jan-Feb 1995, as well as a hiatus in the first two months of 1999. It puzzles me that they cease and restart, seemingly without any logic or reason. But one aspect of MI5s activities against me which is relatively predictable is this weeks articles topic, which is Molestation during Travel. Almost every time I cross the Atlantic, go to the Continent or even try to enjoy a holiday in this country, you can bet that MI5 will be there doing their utmost to wreck it all.

This aspect of the harassment is particularly relevant as I will be travelling to Europe again in a months time, with naturally the Minidisc recorder in tow; so it will be interesting to see if I can record the abuse which will almost certainly take place, either on the Tube going to the airport, at the airport, on the flight, in the terminal building - MI5 have previously instituted instances of abuse at each of these locations, so well see how much taxpayers money they waste this time, and whether it will prove possible to capture their abuse on minidisc.

Read about the MI5 Persecution on the Web

June 1992 in Polands mountain resort of Zakopane

The persecution started in June 1990, and for the first two years I stayed in the UK apart from a couple of brief day trips to Calais. By the summer of 1992 Id had enough of being cooped up in England with abusive fellow employees egged on by an abusive secret police service, and decided to spend 10 days in southern Poland, on what was intended to be a holiday at the mountain resort town of Zakopane.

Unfortunately the psychopaths of the Security Service were not willing to allow me to enjoy a holiday in peace and quiet. The journey to Zakopane was by coach from the meeting point at Londons Victoria coach station (National Express) followed by ferry followed by another coach across Europe. As we left Victoria a youth and his girlfriend started a loud tirade of abuse directed at "this bloke", where the "bloke" was never named, but it was very clear that the "bloke" was myself. The youth said "they" had "found somebody from his school, and he was always really stressed at school, a real psycho". Again, the label "they" was not elaborated on, but it was clear that "they" = the persecutors from MI5. The boy also said, "he was in a bed and breakfast for only one night and they got him". By a not unexpected coincidence I had been in a B&B in Oxford a week previously, which had been booked from work; other things lead me to the conclusion that the company's offices were bugged for most of the 2 1/2 years that I was there, so "they" would have known a room in the B&B had been booked. After a few minutes of this I went back to where they were sitting and asked where they were travelling. The boy named a village in France, and the girl's giggling suddenly ceased; presumably it permeated to her brain cell what the purpose of the boy's abuse was.

It is now very clear to me that MI5 were trying to have me incarcerated, assaulted or killed on this trip across Europe. The degree of verbal violence inescapably leads to this conclusion. When we arrived at our destination, it became clear that many people, both in our tour group and its guide, and among the ordinary residents of the town, knew there was a movement under way to "get" me. MI5 employed many people and significant resources for an action which they knew would only take a maximum of ten days. A commercial operation would never have felt able to waste such resources on such an unproductive and temporary action; only a state-sponsored, taxpayer-funded entity like the Security Service would be able to be so wasteful.

To give some examples of what happened in those ten days; I was walking in some woods outside the town, when a Polish woman, looking at me, said the English "shit" in a strongly Polish-accented voice. For the first three years 1990-92 MI5 had been trying to force this word on me. Another example; I was walking near my "hotel" when a mother said laughing to her child, "a wiesz ze to prawdziwy wariat" which means "you know hes a real madman". And the "TV reacting" happened there too; on Polish TV, a bemused looking journalist said to another, "to jest sprawa Anglikow", which means "its the concern of the English", in other words, none of our business, despite what the English are trying to force down our throats.

Just before we left for home, I went with some others from our group to a nearby bar. There a man shouted at me the same sexual obscenity which MI5 have constantly thrown at me these last three years. I think MI5 try to justify their various terms of abuse by repeating them at me until I say them, either while conscious or while talking in my sleep; and then they seize on my saying those words to "prove" that the obscenities are "my fault", et cetera. This rather stupid reasoning of theirs can actually be seen as indicative of the psychopathic condition attributed to them in a previous article; blaming the victim for the crime you inflict on him is how psychopaths think.

Nor did the persecutors let up during the return trip. Returning on the ferry over the channel, a rather insalubrious-looking guy talked to his mates about "and you know this bloke, hes really mad you know, hes really mad". On the National Express return coach to London, a group of five or six young people started shouting at me. I slumped in my seat and tried to avoid presenting a target, so they got ever more strident - "whats the matter with you, cant you hear us?" One of the other people who had been on the trip to Poland asked them why they were shouting at me, and they said, "hes been to Cambridge", to which the co-holidayer asked them, "have you been to Cambridge?" presumably thinking they were aggrieved fellow students, but they answered "no". Even after I left the coach at Elephant and Castle abuse continued; in the tube station, two kids started throwing abuse at me; one of them said to the other, "and you know he works?" to which the other answered "yes".

Immediate Aftermath of November 1992

As you will know from previous articles, my manager at OCG - ARIS/Oxford, Mr Mitchell, induced a mental breakdown in me in the months leading up to Nov/92. The diagnosis was regarded by the persecutors as a victory for them, because few if any people give credence to allegations of harassment when they are made by somebody suffering from schizophrenia. There is also a bias against the mentally ill, an "institutionalised bigotry" in society comparable to the institutionalised racism against blacks.

However, MI5 did not let up on persecuting me following Nov/92. In December 1992 I flew by charter jet to Alicante in Spain for two weeks recuperation. MI5 planted one of their people on the flight, a youth who tried to start some noises that "hes a nutter". One of the other passengers replied, "oh hes a nutter is he? oh well!" and the youth shut up and said nothing for the rest of the flight. I think it would be fair to say that the youth on the flight was embarrassed by what he had been asked to do in making the flight "uncomfortable" for me; he sounded defensive rather than aggressive.

My first trip to Canada in June 1993

Ive already covered this in a previous article so Ill just give a brief summary here. On 10 June 1993 I flew British Airways from Heathrow to Torontos Pearson Airport. On de-planing from the aircraft, one of a group of four fellow passengers looked at me and said, laughing, "if he tries to run away well find him". It was quite obvious that these four men were the ones who had been harassing me since 1990.

I did nothing to apprehend them or bring this incident to the attention of the airport authorities, mostly because this was my very first visit to Canada, and the last thing I wanted was to get into a dispute before I had even finished disembarking. In retrospect, I can see this was a terrible mistake; I should have made every effort to detain and identify these people.

Subsequently I have made numerous attempts to obtain the names of these people from British Airways passenger lists, by talking to BA, through a lawyer in Ontario, through a solicitor in England, through the UK police, and also through private detectives in the UK. But all my efforts have come to nothing. BA have told me they keep passenger lists for a period of seven years, so they will still have the list for this 1993 flight. I did not see or hear anything during the rest of my visit to Ontario in 1993 which would have lead me to believe that I was being watched or followed.

Journey across Canada in summer 1994

As I think Ive already said in previous articles I emigrated to Canada in late May 1994. For six weeks between late May 1994 and early July 1994 I travelled across Canada from coast to coast, starting in Toronto, visiting various cities and ending up in British Columbia. I saw this both as something of a holiday, and the chance to get to know a little better my adopted country.

As you can guess, MI5 followed me everywhere I went during these six weeks. In Toronto, where I started this trip in late May, I was spoken about by one youth to another with the words "hes an idiot", to which the other replied, laughing sympathetically, "good luck to him".

A couple of days later I went to Montreal and stayed at the YMCA downtown. As you can guess (this is all so predictable, isnt it?) MI5 followed me there and bugged my room at the YMCA. Not only that, but they managed to set-up an instance of "newscaster reaction" from a local television station; while I was watching a Vermont TV news programme on the set in my room, the woman reporter said, "well theyre just tired and they want to go home", which sounds like a pretty unprofessional thing to say until you realise she was trying to say of me that I was the one that was supposed to be tired, and they (ie MI5) wanted me to go home to the UK.

On the bus journey across the North American continent, it was quite clear that MI5 were following me every step on the way. For the first part of the journey they actually put someone on the bus with me, a youth who said at me "that guys paranoid" and tried to incite other passengers to attack me. I stopped for a couple of days in Winnipeg in central Canada, and on leaving the town heard on the radio a female presenter ranting about "insanity! insanity!". It is very tiring travelling such a long distance by bus; I took the journey in two steps, each of about 36 hours; and it is especially tiring when you know MI5 are watching you and harassing you every step of the way.

When I finally got to Vancouver, MI5 instituted the usual harassment, in very short order. I was surprised how quickly they were able to induce hatred towards me in elements of the general populace; the Security Service must have employed a number of agents and serious resources in a very short period of time; and for no real gain, because I havent been back to BC for almost five years, so all their "work" appears to be for nothing. In downtown Vancouver a street person said in front of me, "theyre all talking about him". For a few days I was staying at Pauls Guest House (345 W.14th Ave); on the day I left, the owner Paul shouted at no-one in particular, "hes going to Victoria" - which was quite accurate, I was indeed going to the provincial capital Victoria on Vancouver Island. But I had not told anyone at the guest house where I was going; I had only mentioned to my parents back in England on the phone that I was going away from Vancouver for a few days. Which leads me to suppose that MI5s bugging of the phone in my parents house yielded the "intelligence" that I intended to visit Victoria, and they had passed the information on to Paul.

When I got to Victoria it was again obvious that the persecutors were "doing their stuff" there as well. On the street I was identified as being English, although I had not said anything so my accent hadnt given me away; and returning by ferry to the mainland, I was abused by a Canadian woman who said, "hes a nutter! you can run but you cant hide". During my years in Canada I have never heard the word "nutter" on any other occasion; I do not think it is part of Canadians vocabulary; so the Canadian woman on the ferry, who was obviously talking about me, must have been supplied with this word by the English persecutors. And once I got back to Vancouver, staying at the Austin Hotel on Granville St, I listened to a conversation in the apartment block directly opposite, and a man saying, "hes paranoid, so thats as bad as it can be, so why are they doing this to him?".

Holiday in the States, August 1995

By 1995 I was living in Canada, and in August I went down the eastern seaboard to Florida and as far as Key West by car. As you can guess (this is all so boring and predictable, isnt it?) MI5 followed me every step of the way. I can see in retrospect that this must have been quite easy for them as they had my car bugged, both on the inside to listen to anything that was said and what radio station I was listening to, as well as what must have been a tracker device installed to track it across long distances.

The first city I visited was Philadelphia. In the old Congress Hall where the first US Congress assembled, the woman guide started referring to my situation, saying that "all these people in Europe were watching it", and they were "a little paranoid" at this 18th-century experiment in democracy. Also I had recently written a newsgroup post where Id described a (female) poster as "wet-nosed" (implying "canine"), and a young girl in Philadelphia remarked, "so he thinks were dogs?" There were two or three more incidents during this holiday in the eastern States, including a radio station down near Miami, showing "they" had tracked me all the way there, and were bugging the inside of my car; but I didnt record the details and Ive forgotten some of it now. Also down in Miami Beach a French tourist in a lift expressed support for me with the words, "cest incroyable" ie. its incredible, meaning that MI5s well-known actions against me were beyond belief.

To go back a bit, in about May/June 1995 Id visited New York, again by car, and was insulted several times by people using the same words that had been used against me in England. In Central Park, and elderly Englishman (not a real gentleman - but then the Engish view of themselves as "gentlemen" etc is quite laughable) looked at me and said "idiot". And while I was eating in a streetside restaurant a New York youth started laughing and said something like, "I cant believe it, hes actually here" - I think that was because I had had an expressed wish to visit New York for some years before this, although after this visit I wont be going there again for a very long time.

Visit to Poland December 1995/January 1996

In December 1995 I flew (BA again, unfortunately - every time Ive flown BA one of these incidents has happened, presumably MI5 is happier setting up harassment on British-domiciled carrier) from Montreal to Berlin and travelled on to Poland to visit family. MI5 naturally harassed me in Poland during my brief stay. They followed me around and got Polish people to take part in the harassment. In one case two Polish youths talked in front of me saying in English (with marked Polish accents), "fucked up men, fuck you". There were also other incidents which I dont remember too clearly since it was some time ago.

The return flight connected through Heathrow, and in the transit lounge MI5 again set-up harassment against me. In Poland they were talking their abuse in English, and in London they set Polish people after me to speak in Polish; they heard me on the phone to my father, and said "a wiesz ze to Polski wariat", in an almost sympathetic, inclusive fashion (translation. "you know hes a Polish nutter"). Once on the flight to Montreal I was again set upon by two English youths, one of whom spoke and the other listened. The aggressive "fat bastard" youth said, "if he wants to be a wanker" (its my fault theyre harassing me, you see), self-justification that "hes a nutter" (so we have to keep on abusing him, because hes ill), as well as talking about the town in Poland where I had been staying. He also said, "he doesnt know who we are", but as already remarked in a previous article, that was at best a half-denial of my guess expressed in internet newsgroups that the people after me were MI5 - if anything its a half-confirmation rather than a half-denial.

These incidents are still going on. You can hear digitised audio files of abuse on a BA flight to Berlin in 1998 on the Web at address

On this flight they were again attacking my mental health; "paranoid, hes paranoid" and "nutter" are discernable. The last "during travel" contact was at Ottawa Airport on 21 July 1998, when "Alan Holdsworth" the psychopath MI5 agent, dressed as a vagrant, was pacing aggressively in the departure area. In three weeks I will again be travelling to Europe; we will see what fresh acts of molestation MI5 perpetrate during this trip.

You can get manuals, albeit for a price, from places like Best Electronics and B&C Computervisions...

Just a thought. :)

Hi Ronald,

I have checked at Best Electronics and indeed they have the Owners
manual at the price of $12. Thanks you very much.

Just I thought I could get it free through Internet :P

I got something :-)

I have found this website http://dev-docs.atariforge.org/

They have Owner's manuals, Software Manuals, Hardware Manuals and
Service Manuals.

I understand - seems a bit pricey, after S&H... :)

Monday, July 14th 2008,

the long awaited cracked additional modules for Cubase sequencer are now
out! All disk protections have been removed!

- Studio Module : The Total Recall Studio Organizer. Manages the settings
for all your synthesizers and other MIDI Devices.
```

- StyleTrax : The Accompaniment Tool. Make music in seconds with the Styles that are included, or create your own in minutes.
- CueTrax : The Graphic MasterTrack Editor. An essential tool for anyone making music for film or video.

These modules are compatible with Atari versions of:
- Cubase Score
- Cubase Audio (CAFCRACK packages included)
- Later versions of Cubase 3.x (For example, 3.01 is excluded contrary to 3.10)

I advise to put STUDIO.MOD, CUETRAX.MOD and STYLTRAX.MOD files in MODULES folder. Before loading Studio Module, you MUST create a STUDIO.DAT folder in current Cubase program folder.

Studio Module (v1.02 package):
http://jeanpatatari.site.voila.fr/modules.add/STUDIOJP.ZIP

Studio Modules (v1.06a, v1.06c, v1.07a):
http://jeanpatatari.site.voila.fr/modules.add/STUDADJP.ZIP

Studio Module driver editor:
http://jeanpatatari.site.voila.fr/modules.add/DMAKER.ZIP

CueTrax Module:
http://jeanpatatari.site.voila.fr/modules.add/CUETRXJP.ZIP

StyleTrax Module:
http://jeanpatatari.site.voila.fr/modules.add/STYLTXJP.ZIP

Special thanks to JLC!

Jean Pat

Always available CAFCRACK v1 (M) Crack For Cubase Audio Falcon 2.06:

Hi everybody,

recently I got an Atari 520 STE and it cames with a joystick, but to be honest... the joystick is crap :-D Also I would like to play 2 players games.

The question here is because I didn't find any way to play with the keyboard. All the games that I loaded only works with the joystick.

Is there any configuration or something that I have to do to play with the keys? Thanks a lot, and sorry because my ignorance.

Cheers,
Dave

Unless the game is programmed to support some key combinations (there's usually something in the manual if it is) then there is no way to force a game to not use a joystick afaik. I'd have a look on e(vil)-bay for a joystick if I was you, the cheetah bollostick (joypad) is quite nice for everything except driving games and the Quickshot microswitched ones are pretty good too.

Hi Thomas,

thanks a lot for the information. Indded que Quickshot were the best
joystick when the 8 and 16 bits computers time. I'll look in eBay
then.

Cheers,
David

You do know that you can plug a second joystick into the port
normally used for the mouse, don't you? That allows 2 players.
But I guess you really want a better (pair of) joysticks...

Hi Dave and Thomas---

I have a 1040STe model which has a manual. Its very similar to the
original ST manuals except with references for additional video modes,
the PCM sound, and ports.

This site contains Atari ST technical documentation and upgrade projects:
http://atari4ever.free.fr/

I have the Multiface ST but not the cable that connects to the monitor port.
Does any one know what pins the Multiface connects to on the ST monitor
port?
It looks like there are two pins on the Multiface that may connect to
the monitor port and I assume one of them would be pin three, the
General Purpose Output, but I have no idea about the other pin.

the sanctity of the marriage bond. For state reasons he had separated from his wife, and for state reasons he could not give his consent to the dissolution of the union of his brother and step-daughter. They must, therefore, continue to drag the chain that united them; and they did, but with angry hearts.

Louis returned to Holland in a more depressed state of mind than ever; while Hortense and her two children, in obedience to Napoleon's express command, remained in Paris for some time. They were to attend the festivities that were soon to take place at the imperial court in honor of the marriage of the emperor with the Archduchess Marie Louise of Austria. The daughter of the divorced empress, with the emperor's sisters, had been selected to carry the train of the new empress on the marriage-day. Napoleon wished to prove to France and to all Europe that there was no other law in his family than his will, and that the daughter of Josephine had never ceased to be his obedient daughter also. Napoleon wished, moreover, to retain near his young wife, in order that she might have at her side a gentle and tender mentor, the queen who had inherited Josephine's grace and loveliness, and who, in her noble womanhood, would set a good example to the ladies of his court. Hortense mutely obeyed the emperor's command; on the 1st of April, 1810, the day of the union of Marie Louise with the emperor, she, together with his sisters, bore the train of the new empress. She alone did this without making any resistance, while it was only after the most violent opposition to Napoleon's command that his sisters, Queen Caroline of Naples, the Duchess Pauline of Guastalla, and the Grand-duchess Elise of Tuscany, consented to undergo the humiliation of walking behind their new sovereign as humble subjects. And th

SEXY story. The cute doorman gives me an enigmatic look when I say I'm
here to see you. I am not sure if maybe he thinks I am your daughter.
You are not quite old enough for that, I am not quite young enough -
but we are pretty close. Am I wrong for thinking that's hot?
Definitely. I think...  http://ragdai.info/sex-story.html

Muuttuva Mars

Kauan sitten Mars on ehk� ollut tyystin toisenlainen maailma kuin se on nyt.
Tihe�mpi kaasukeh� ja l�mpim�mpi ilmasto on mahdollistanut veden
esiintymisen nestem�isess� muodossa pitk��n, ehk� satoja miljoonia vuosia.
Nykyisess� Marsissa on vain hyvin s�ilyneit� j�lki� menneiden aikojen
vesist�ist� ja nestem�ist� vett� on en�� syv�ll� ikiroudan alapuolella -----

*Otin p�tk�n lainaksi osoittaakseni sit� mekaniikkaa joka Marssin, kuin Maan alati muuttuvia vesitaseita on aikain saatossa muljaillut. T��ll� tosiaan esitettiin, ettei Marssissa ja lukuisissa muissa paikoissa olisi vett� jossain muodossa. Kuten havaitsemme Marsssissa on ollut vett� siin� kuin Maasa. Mutta koska s�teilyss� vesi ionisoituu ja happi muuttuu jopa typeksi on vesi kaasuuntunut/kaasuuntumassa ionisoitumalla ja paljon h�vi�m�ss� avaruuksiin kaikialla. Joka tapauksesssa yh� siis Marssissa j��t� ja vett� l�ytyy, kuten artikkeli kiistatta osoittaa!

Nykyinen Mars ole ehk� edes pahin mahdollinen. Marsissa on ilmeisesti kylmempi� ja l�mpim�mpi� jaksoja kuten Maassakin. Viimeisin j��kausi oli Marsissa pari miljoonaa vuotta sitten. Silloin j��tik�t levitt�ytyiv�t napa-alueilta aina 30. leveysasteelle saakka, joka maapallolla vastaa Egyptin pohjoisosia ja etel�ist� Brasiliaa. T�ll� hetkell� Mars on ilmeisesti matkalla kohti l�mpim�mpi� aikoja, jotka ennen pitk�� vaihtuvat v��j��m�tt� taas j��kauteen.

*Sulavanakuvia siel� on jo jonkinajan saanut n�hd� mm. NASA:n kuvastoissa.

Toisin kuin Maassa, Marsissa j��kauden syyn� on napojen ajoittainen l�mpeneminen, joka johtuu planeetan py�rimisakselin huomattavasta, jopa kymmenien asteiden heilahtelusta.

*Puuttuu vakauttavan hyrr�voiman massiivikuu Maan tapaan siis.

Napaj��tik�iden hiilidioksidi ja vesih�yry vapautuu kaasukeh��n, kulkeutuu kohti viilenev�� p�iv�ntasaajaa ja h�rmistyy takaisin pintaan. Se muodostaa joidenkin metrien paksuisia kuura- tai lumikerrostumia, joiden seassa on runsaasti p�ly�. Kun kerroksen yl�osien j�� sublimoituu takaisin vesih�yryksi, j�ljelle j��v� p�lykerros toimii eristeen�, joka est�� kaikkea j��t� sublimoitumasta. J��kausi alkaa kuitenkin hellitt�� otettaan, kun napaseudut j�lleen viilenev�t ja sitovat hiilidioksidin ja vesih�yryn suurimmaksi osaksi takaisin j��tik�ihin.

Vaikka Mars on osoittautunut monessa suhteessa sittenkin samanlaiseksi planeetaksi kuin Maa - ainakin kaukaisessa menneisyydess� - onko se ollut riitt�v�n samanlainen el�m�n synnyn kannalta? Vai onko Mars vain eloton, ruostunut j��pallo?

Markus Hotakainen

I want to use my ST Xformer to move Atari 8 Bit files onto a 5.25" Diskette! I want to hook up an 8 Bit Disk Drive like an Indus GT or an Atari 1050 using the Xformer Cable and emulator software. I dont want to run 8 Bit Software on my ST, I just want to transfer files to 8 Bit 5.25" Disk so I can run Software on my Atari 800xl! Is this possible with the ST Xformer Cable? Please Reply! Please Answer! Please Reply Irregardless of your Answers! Thanx! =-=Ben=-=

ST Xformer 3.0 should be able to use the Xformer cable and comes with
a transfer program. If you need the latest version you can get it at
http://www.emulators.com/download.htm

Hello,

I haven�t used an ATARI for internet a LONG time, but I still have my former TT emulated via MagiC-PC on my PC. I just checked the folders and have seen that years ago I had installed STING (not STIK) from Peter Rottengatter on my (now virtual) ATARI. So here is the folder and file name arrangement:

In my "AUTO"-folder there are 2 files, which are the STING.PRG itself and a simple Textfile called STING.INF that just contains information of the folder, where the actual STING related stuff is placed (in my case there is only one line in the file: "C:\STING\" (without the quotes).

So in my case the folder has to be on C:\ in a folder called "STING". In this folder all the rest of STING is placed. There you also find the file DEFAULT.CFG, which contains in my case the following information:

```
#
#  This is the STinG relevant stuff.
#
ALLOCMEM    = 256000
#
THREADING   = 50
FRAG_TTL    = 60
#
ICMP_GMT    = -60
ICMP_AD     = 10
ICMP_FLAG   = 0
#
TCP_PORT    = 1024
MSS         = 2048
RCV_WND     = 4096
DEF_RTT     = 50
DEF_TTL     = 128
TCP_ICMP    = 1
#
UDP_PORT    = 1024
UDP_ICMP    = 1
#
DNS_CACHE   = 64
```

```
DNS_SAVE    = TRUE
#
#
#  Here starts the client relevant stuff.
#
# Used by the Dialer :
#
DIALER      = 127.0.0.1
#LOGIN_BATCH = C:\STING\DIALER\LOGIN.BAT
#
```

You see, besides some basic TCP/IP parameters, the last line shows the location of the dialer login script...

So, go for STING by Peter Rottengatter. There you should also find a hypertext for STGUIDE, which should give all the information you need.

Best regards,
Mario.

Subject: ST Xformer Help!

I want to use my ST Xformer to move Atari 8 Bit files onto a 5.25" Diskette! I want to hook up an 8 Bit Disk Drive like an Indus GT or an Atari 1050 using the Xformer Cable and emulator software. I dont want to run 8 Bit Software on my ST, I just want to transfer files to 8 Bit 5.25" Disk so I can run Software on my Atari 800xl! Is this possible with the ST Xformer Cable? Please Reply!

Please Answer! Please Reply Irregardless of your Answers! Thanx! =-=Ben=-=

Here is what the original STiK documentation says, which can be found on
Flinny's page:

http://www.flinny.demon.co.uk/

Quote: "You need to create a STIK_CFG folder (directory), this can be
located on your
boot disk. Either C: if you have a hard drive or A: if you have a floppy
only
setup. If you do not want to create a folder on your boot drive, you can
create
a text file called STIK_DIR.DAT, this file will simply be one line that
gives
the path of your STIK_CFG folder.

Copy DEFAULT.CFG and your default dial script to the STIK_CFG folder.

Copy STIK.PRG to your Auto folder.

Some notes on STIK.PRG location.

STIK.PRG (install in Auto Folder after Hsmodem, can be ran from Desktop under MiNT). If you desire to run it from the Auto folder it must run before MiNT. Actually with Naes it doesn't matter so much where it is ran from. After MiNT seems slightly better though. If you find out differently, please let me know.

Copy Qdial and it's RSC files to your hard drive. This can be where ever you wish to have it located. You can run Qdialer as an .ACC file. If you choose to have it as an .ACC place it and it's .RSC file where ever you put your .ACC programs.

Edit DEFAULT.CFG and DIAL.SCR to match what your system needs for connection.
More details of this can be found in the STIKVAR.TXT and the EXAMPLE.CFG files.

Reboot your system and run Qdialer. Edit any options you may want to change under the tools icon and save it's config file."

Good luck!
Best regards,
MC.

I have a very RARE Indus Disk Drive for the Atari ST except its a 5.25" Indus made for the ST! It works, it's complete in the Original Box! Please Reply! Please Answer! Please Reply Irregardless of your Answers! Thanx! =-=Ben=-=

Indus GT-1000; Indus; 5.25" Floppy Drive for Atari ST Computers. Plugs into your ST as Drive B:\ the same as any ST Disk Drive except does not have a 2nd 14 Pin Din Disk Drive port to Daisy Chain another Drive! Formats Double Sided/ Double Density. Supposed to do Higher Density 5.25" Disks but I dont have Hi Density 5.25" floppies to test them on. Comes with GT-1000, (2) Manuals, I/O Cable, F.S.I. Utility Disk, Power Supply and Original Box. RARE..NIB.$200 U.S.

Atari 8 Bit and ST Games/Software, Hardware/Accessories and Books/References! I also have one with a 40/80 tracks switch to read both 360 and 720k
floppies.
But I wouldn't tell that it costs $200...

Guillaume.

I've got one of those too, but it's not the same brand.

Also, have a program that allows you to use Atari 1050 disk drives on the
ST as a ST drive. But you need a special cable.

"Guillaume Tello" <houten.van@orange.fr> wrote in message

Some time ago I bought a second hand Atari 520STE, and included was a
cartridge which I don't know what is for.

Please, could anybody tell me for what is that cartridge for? Many
thanks.

Here are some pictures that I took:
http://fotolog.miarroba.com/f/9/5/0/5826950/1.jpg
http://fotolog.miarroba.com/f/9/5/0/5826950/2.jpg
http://fotolog.miarroba.com/f/9/5/0/5826950/3.jpg

The main chip is named HARTD1 87HCI, but I couldn't find any
information in Internet about it.

Aika huvittavaa, ett� tiedotusv�lineet ovatr kiinnostuneet vain Kallin taustamaksajista, miksi? Miksi ihmeess� ei oteta esille esim. Anne Holmlundin ja vaikka nyt Paavo Lipposen kaltaisten kiistatta tiedettyj� ydinalan madonlukukytk�ksi� SDP:n vaalien alla ja noin?

Niist� voisimme saada enemm�n kuin mukaansatempaavaa viitett� siihen mist� esim. Vapaavuori helsinkikeskeisen ydinintonsa ja Suomen maakuntien sy�ntiins� potkun ottaa? Nimitt�in n�iden kaikien taustasponsorit kun ymm�rt��kseni on JO valmiiksi lehdist�lle tiedotettuna! Mit� hy�ty� edes olisi lain kirjaimella, jossei asiasta kaikkein kiinnostuneimmille , eli ��nest�jille asti sponsseista reality� tulisi? Ai niin pahus tosiaan, ei ne tulekkaan!.. ..(

Kallia moitti muutamia viikoja sitten mm. TVO:n johtajana tunnettu P. Simola. H�n oli kovin k��rmeistynyt siit�, ett� heid�n lukuisat lanserauksensa seutukuntien politikoille olivat k�pyis�sti kuivuneet kasaan. Pertti prutisi pahasti siit�, ett� OL-3 hanke meni kuin kiulu sikalaan, mutta t�m� OL-4, niin sille l�ytyi TVO:n suunnattomaksi kauhuksi tykitt�v�� kaatajaa massoittain. Oi voi ja j�i sen verran ydinalala hampaankoloon, ett� p��ttiv�t silt� seisomalta silkaksi "kostoksi" erottaa Kallin my�s , .. .oi ja niin tosiaan Forttumin isopalkkavirasta.. ..Uups, jaa niin ei meill� n�ist� mahdolisista sponssi Posivoista ja Fennovoimista saa miss��n virallisesti haastella. Voi kauhistus sent��n juu.. .!

Aurinkokunnassa planeettojen ratanopeus pienenee et�isyyden auringossa kasvaessa, koska gravitaatio heikkenee vastaavasti auringosta.(Juuri kuten aiemmin kerroin olevan tilanne my�s atomien K, L, M-kuorikerroksien ionisaatiotaulukossa, jonka t�nne hetki sitten vastaanv�nk��jien harmiksi postasin. Eli totutusti min� olin my�s t�ss� t�ysin oikeassa ja SUPO/TVO insin��rist�t totaalisen v��r�ss�.. .Noin yll�ttyik� en�� kukaan?) Galaksien on todettu py�riv�n kuin polkupy�r�n pinnat ja syyksi l�ytyy mystinen galakseja ymp�r�iv� ns. musta aine. Neutriinon l�ytynyt massa on osa t�t� ainetta. My�s sammuneet ruskeat t�hdet, mutta nyt haetaan my�s MACHOA Massive Compact Halo Object. Jokia ymp�r�i mustana aineena galaksien ulkopuolella.

N�kyv� mailmankaikkeus on 4%, 23% on pime�� ainetta ja loput 73% on nimetty pime�ksi energiaksi. Sitten eritt�in t�rke� tieto: 7miljardia vuotta alkur�j�hdyksest� on gravitaatio ja sen mm. vuokseilmi�iden kaltaiset fossiilienergiah�vi�t hidastaneet alkupaukun laajenemisenergian voimia. Gravitaatio vet�� my�s ihan suoraan kappaleita takaisin yhteen. Nyt ei vaan tiedet� riitt��k� gravitaatiomassan voimavarat lopettamaan koko fossiilienergialaajenemisen alkupaukusta. Maailmaan on todettu alkavan vaikuttamaan pime�n enmergian kasvava vaikutus kiihdytt�en laajentumista. T�m� selittyy sill�, ett� tyhji�avaruuksissa ainetta muodostuu alati aineen ja antiaineen pareja, jotka "lainaavat" energiaa gravitaatiopv�r�helys�ikein ymp�rilt��n n�it� muodostaakseen.

(Kyseisess� ilmi�ss� ei ole toki mit��n ihmeellist� vaan kyse on jo 60v tunnetusta arkisesta Casimir-efektist�. Mutta koska kaava antaa fotoneille massan, s�teilyenergialle kyvyn varastoitua, siirty� ja viiveell� purkautua ja n�in radioaktiivisuudelle sen pysyvyydet ja beetta-soihduille kyvyn 10-kertaistaa s�teilytaustamme IAEA p��tti kylm�ss� viisaudessaan kielt�� MY�S t�llaisten faktojen olemassaolot tuosta vaan! Fysiikka invalidisoitiin aina koulutuspuutetta my�ten ja nyt ei maailmassa juuri muut ymm�rr� fysiikkaa kuin n�iden "kadotetun tusinakaavaston mets�st�j�t!")

Kirja jatkaa salatuista gravitatiolinkkiytyvist� Casimireist� peitellysti: "T�m�n pit�isi olla juuri sit�, mit� olemme etsim�ss�. Lis�ksi: mit� suuremmasta tyhji�st� on kyse, sit� suurempi poistovoima n�ill� kyseisill� virtuaalimuodostushiukkaspareilla. Oletamme siis t�m�n voiman kasvavan maailmankaikkeuden laajetessa, juuri niinkuin olemme havainneet. Kosminen v��ristyminen satojentuhansien galaksien muodostumisessa ovat osoittaneet massallisten fotonivalokimppujen v��ristyneen massan v��rist�min�. (Juuri kuten Rytk�nen oivasti esitt��!) Ilmi� tynnetaan my�s Einsteinin valorenkaina esim. 4C 05.51 radiokohteessa. Galaksien on usein todettu venyv�n mm.kaariksi. Galaksit kallistuvat jne.

Nyt jotain lekaa niille SUPO harhatiedottajille mm. Evojeesuksille, joiden mukaan nykyfysiikka osaa laskea 15 numeron tarkkuudella tapahtumiamme:"S.87

Itse asiassa laajentumisteorian t�htitieteellisten havaintojen ja teorioiden mallin v�lill� oleva ero on luokkaa 10^120. Virhe on niin suuri, ett� kyseess� t�ytyy olla suurin virhe teorian ja havaintojen v�lill� KOKO tieteen historiassa!" .. .. ..!!!

*Nyt ei voi kun vet�� henke� ja naureskella sille sulalle hulluudelle jota IAEA:n "kadotetun fysiikkatusinan kaavakato maailmallemme aiheuttaa. Ja tosiaan alkakaa nyt laajasti ymm�rt��, ett� mm. Rytk�sen, ja minun kritiikini nykyfysiikkaharhasta perustuu JUURI t�m�nkaltaisiin asioihin! Nimenomaan vaikka aihesta ei suin surmin halua ydinhallintomme r�ike�n h�rskein painostuksin keskustella, niin Newtonilla, Malenkalla ja Einsteinin pysyvien ja katoamattomien s�teilyenergioittensa maailmassa jo oli fysiikka miljoonasti paremmin hallussa kun nykyisess� IAEA:n invbalidisoimassa fysiikkaharhautuksessa!

A new site about Atari TT has came to being. All interested people are invited. We aim at gathering informations (as much as we can find) about 32-bit Ataris and also we want to contact TT-users with those who still make various extensions to TTs. You can join the online list and help us with developing the site. We also look for someone who can help with making German version of it.

The link to the site is: http://www.ataritt030.info

Really cool and useful data base that (I hope) will grow!

I liked the Atarians list (I joined!) and the links that everyone can add.

I will add a link to your site from mine.

Guillaume.

Hello Hallvard,

You could do what I am doing now and use the Ethernet hardware with the ISA card that connect through the cartridge port. It worked great with my STe and is not working fine with my Falcon. You want to get in contact with Rory from SCAT. He took over the project from Lyndon Amsdon.

>I would like to add Ethernet capabilities to my Mega STe, but since

I'd like to hear more about this project although I prefer not adding
any more items to my already crowded cartridge port (I think I have 4
or 5 devices there now).
That's why I'm looking into solutions which use the ACSI/SCSI port or
even hacking into the internals of the MegaSTe.
Is that Rory McMahon you're referring to?
Do you have an email address or website of his? I can't find either by
searching the web although several references to him pop up.

I'm frustrated that there's simply no readily available IDE solution for the STe/MegaSTe.

I was quite optimistic for a while as STlabs (http://stlabs.free.fr/) had some exciting new hardware projects going. Alas, the developer no longer replies my emails and the website seems to indicate no new developments.
I was hoping for memory expansion and IDE support for my MegaSTe.

So what other options do I have?
IDE support is my main priority, mainly because I really need a silent storage system and am hoping for a memory-card reader solution instead of a normal mechanical hard drive.
SCSI is no problem for me as I already have several "Link" ACSI to SCSI adaptors (including the Link 97 which apparently is the most compatible one around). Then there's the internal SCSI interface of the MegaSTe which currently has a 540MB SCSI hard drive connected to it.

Still, I don't know if any of this will help concerning the "card-reader drive". I have previously heard about SCSI card readers and SCSI to IDE adaptors, but neither are easy to get hold of.

As for actual IDE interfaces there's the DIY project by Pera Putnik (http://members.tripod.com/~piters/atari/astide.htm) and a simplified version of this by Joogn (http://www.joogn.de/atari_ide.html), but both demand a pretty high degree of knowledge in electronics as there are no ready to use PCB layout files etc. but rather just a schematic with address line connections etc. I'm definitely into electronics, but that's a bit over my head.

I don't mind soldering and hacking (neat hacking that is; not bits of wires and ICs dangling over the MegaSTe mainboard and so on), but there really doesn't seem to be much in choice for us STe or MegaSTe users.

The same goes for memory upgrades. Thought not essential, and certainly not as important as an IDE interface, it would be a most welcome upgrade.

Hallvard

I've had no problems buying SCSI-to-IDE converters through eBay, although you'll probably pay around US$50 used. One day I intend to try out the SCSI->IDE->memory card arrangement ...

Roger

Hello Hallvard,

First of all I meant to say below that the ISA card does work well with the Falcon030. Yes I did mean Rory Mahon. His email address is rory.a.mcmahon@gmail.com. Quite a guy and very good with a soldering iron. I just bought an Eiffel interface from him on Ebay.

Hello,

First of all, I meant to say below that th ISA card does work well with the Falcon030. Yes I did mean Rory McMahon. His email address is rory.a.mcmahon@gmail.com. Quite a guy and very good with a soldering iron. I just bought an Eiffel interface off of him on Ebay.

I've seen them at ebay, but they're not exactly cheap, going for
around US$ 50 and up.
I thought I had found a cheap one a couple of weeks ago, but as usual
they put in an excessive overcharge for sending it to you (especially
if you're outside the US).

Have you found them other places for less?

Thanks. I'1l send him an email.
The EtherNEA will be the option for me since I don't want to use the
cartridge interface. Perhaps Rory knows more about that as well.
Haven't heard anyone here using the ACSI port for ethernet, only the
cartridge port.

You need a DMA cable to go to the ST. 50 pin Centronics to the drives.

Yeah he should know. Still, I use the cartridge port and it is ok until I get
a driver for the PCI RealTek card.

I seem to remember some for around $30 in my searches. I have learned the prices really depends on where you buy.

PCI? Is there yet another Ethernet adapter or interface that fits the
Atari ST? This is probably even more interesting than an ISA interface
adapter since PCI ethernet cards are readily available at any corner
shop selling PC stuff.

Well actually the PCI card will be for the Falcon030, but I have heard about a
PCI interface for the ST. I had been using the ISA card in a STe using a cart
and it worked just as good as it does in my Falcon. I still like that idea and
would probably get the multi-cart interface that Best Electronics sells.
Infact, I may just get it anywaty for the Falcon.

On boot HDDRIVER recognizes my CD-ROM and assigns a partition to it. I can create an icon for that partition on my desktop, but of course it doesn't work without a cd driver. Why is it good for then? Does this affect Spin! or ExtenDOS in any way? I'm asking this because after the easymint installation my CD-ROM stopped working and I don't know whats wrong with it. Somehow Spin! doesn't install a drive letter to it and I cant access it through the drive letter that is installed by HDDRIVER. The situtaion is the same wheter I boot to TOS or MiNT.

Yes, with the latest versions of SPIN! when running HDDRIVER you can

access *data* CDs without a CD-ROM driver.
If you do not use this feature you should configure HDDRIVER not to
treat CD-ROMs as removable media drives, so that HDDRIVER does not
assign a drive ID.

How can I configure HDDRIVER not to treat CD-ROMs as removable media
drives?

In HDDRIVER 8, there's an option in the "Removable media" dialog box of HDDRUTIL. I think it's the same in HDDRIVER 7, but I'm not sure.

Roger

Yes, it is basically the same. In general all available options are
explained in the manual.

That checkbox does nothing here. On boot, hddriver always assign a
letter to the cdrom wheter or not that checkbox is checked. Does the
driver automatically updated if I change that checkbox and click OK?

Yes, it does. After changing the setting and a reboot HDDRUTIL should
display the new setting.
Can you please post the information displayed for your CD-ROM when
running HDDRUTIL's ID test?

HL-DT-STDVDRAM, this sounds as if this device can also read/write
DVD-RAM media, most likely manufcatured by LG or NEC. Such a device is
both a Direct Access and a CD-ROM device and HDDRIVER has to reserve
partition IDs in order to be able to access partitions if a DVD-RAM
media is inserted. This is not a bug but a necessary feature, otherwise
you would not be able to use DVD-RAM media.

SPIN! is able to use the same ID as HDDRIVER in order to access such a
device, by the way. If a CD-ROM is inserted the (first) partition is
mapped to the CD-ROM contents and is read only. If a DVD-RAM is inserted
the partitions are writable, just like with any other removable media drive.
I still remember Julian and me experimenting with this feature in the
good old days :-).

Uwe is correct (as usual :-)) - I recognize the inquiry data and it is indeed an LG device with DVD-RAM support.

Roger

I can confirm what Djordje Vukovic wrote in some older thread here: that CBHD can access at least 2GB on some SCSI disks via Mega STE's ACSI-SCSI adapter.
It worked me well on IBM 2GB drive, while on Fujitsu worked not.
Don't know how it is possible - I mailed Claus Brod yesterday about it. Maybe IBM can use full 24-bit addressing (without device # - 3 bits in command?).

Btw. I doscovered it while made mod. on mentioned adapter. Mod is for allow accessing larger SCSI drives - by allowing 6 bit commands instead 5. It works now partially, but I need to solve ACSI target # problems. I do it without schematic or PAL logic, so it is not easy. Anyway - I can access whole 18GB drive with read(10) command, read_capacity command works fine. As I see, no driver which can work with it, so I will made special driver for....

You should read about linked commands, explained in the SCSI specification.

I will, when catch some time.
However, it is common opinion that access over 1GB is not possible -
as we can see in other, mentioned thread.
Why you not use linked commands in Hddriver ?
(I make driver without SCSI layer, and do not plan to use it - it
works pretty fine now, and is much faster than CBHD)

pp wrote:

>   Why you not use linked commands in Hddriver ?

Mainly because I do not want to support features only available with a few drives (I would not even be able to tell a user which drives support it, it may even depend on the firmware version) and because some of these drives still would not work with the ST/STE because they require initiator identification.
All in all this feature would more or less just work by chance. I prefer to be able to definitely say whether somebody can use my software or not.
By the way, there is also a small performance penalty when using linked commands.

here was a misunderstanding, I think. I was inquiring about limits related to the ACSI port on a MegaST, NOT the internal ACSI/SCSI adapter in a MegaSTE (which I do not have). My problem was that I could not locate a software suite that could both configure and then run a 2.2GB hard disk through my GeSoft adaptor which has a questionable ICD-compatibility. Finally I configured the disk using CBHDCONF and am using it with Hushy driver. Everything works fine.

Well I was finally able to desolder the old chip and install a socket. Now removing any future dead chips will be easy. It fits fine in a stock falcon btw...

Foxy's Showtime on Capital FM 25/11/98 7.35pm

Certainty level: 100%

This one, I can say with absolute certainty, is about me. It was recorded on my Sony Recording Walkman on the evening of Wednesday 25 November 1998. It doesn't mention me by name, so the objective observer might have trouble understanding why I'm so sure it's about me. I'm sure, because the harassment had restarted over the period when this piece was broadcast, and what Capital transmitted would have been in context with events at the time. (Sorry if that explanation is somewhat opaque, but I don't really want to embarrass myself by giving an explanation in detail, and an intelligent reader should be able to work it out for him/her self.)

This isn't the first time Capital have "got at" me; they were doing so right at the very beginning in summer 1990, when they said, "if he listens to Capital then he can't be all bad"; and Tarrant made remarks about me in his breakfast show in spring 1994, when he said, "you know this bloke?

he says we're trying to kill him. We should be done for attempted manslaughter."

Unfortunately I didn't record those previous, much more conclusive instances of harassment by Capital DJs, and Capital Radio tells me they only keep recordings for three months. But lately I've been recording everything, and here is one product of that recording.

Neil Fox was introducing some petite Swedish songstress, sounded like Amelia, when he said something about her petite-ness ;

"she's a big big girl, actually she's really about tiny, she's this big, would you say what less than....."

then one of his studio staff shouted, "six inches"

then Fox laughed and said, "less than a meter tall, definitely"

What I think the "six inches" referred to should be obvious. I think it's sexual abuse directed at me.

Also there were a lot of words like "crazy", "mad" etc on this programme, which reinforced my belief that this was on purpose directed at myself.

I think Fox may be something of an unwilling participant in this abuse, he doesn't want to be an abuser but the persecutors are using his show and his staff to get at me. This is not the first time this sort of thing has happened from his show; and my guess is that it won't be the last

Jackie King from the Flying Eye 14/3/99

Certainty level: 40%

In early March 1999, Capital Radio alleged they had received some emails, one of which was forwarded to me. It contained the words, "you know this bloke, he says we're trying to kill him, we should be done for attempted manslaughter!" which Chris Tarrant had said in 1994.

Following these emails there was an explosion in abuse activity, both from Capital Radio, and from MI5 themselves. MI5 followed me around and hurled abuse at me. The following audio file contains what may be abuse from the radio station.

Jackie King from the Flying Eye made these remarks on Sunday (14/3/99) lunchtime 12.24pm; "gas main work being, er, HANDLED if you like (laughs, embarrassed) outside Madame Tussauds, Euston Road obviously feeling the backlash of that".

The key word is "handled", which she sounds embarrassed to be saying; to me it looks like an attempt at a sexual slander. Capital Radio aren't even pretending not to get at me any more. I asked Chris Tarrant several times about his remark from 1994, and he has consistently avoided answering.

Virgin Radio-Johnny Boy (21/August/1998)

Certainty level: 60%

On Saturday 15 August 1998 I attended a gathering of contributors to newsgroup uk.misc at London's Victoria railway station. Also present was Simon G, who had previously given this description of what he would be wearing;

At 06:36 AM 13/8/98 GMT, Simon wrote:
>further clarification to aid recognition, i'll be wearing
>a t shirt, a brown suede waistcoat, a brown suede miniskirt,
>& a pair of patchwork leggings (& may have a widebrimmed straw
>hat, too).

It is my belief that my persecutors, who monitor my home telephone line (and consequently read all modem communications including email), were aware of this meeting, and may even have observed the "meat" taking place.

Following the "meat" it seemed to me that one or two attempts were made by my persecutors to portray me as "gay", on the basis of Simon's suede miniskirt, which in their inventiveness my persecutors attributed to me, not Simon. (Just for the record, Simon is hetero, and has agreed to the above email extract being published.) The following item from Johnny Boy's Wheels of Steel (between 7pm-11pm, Friday 21/8/98) is one such attempt.

(conversation) (J=Johnny-Boy, H=Hipster)

J: Texas of course part of V98 this weekend enjoy it if you're going. Keep your eyes out on Sunday in Chelmsford for Hipster, because he's going to be there. What are you going to be wearing?

H: I'll be wearing my, er, my suede shorts.
(sycophantic laughter)

J: and believe me he ain't joking, he ain't joking. OK coming next at Virgin on the Wheels of Steel...

Why do I think Hipster's "suede shorts" refers to Simon's mini-skirt? Because "suede" in both cases (obvious!); because "suede shorts" indicates "gay" which they were trying to pin on me; because "shorts" = something short, such as a "mini"-skirt; and because the two DJs both laughed as soon as Hipster said "suede shorts", they knew what the joke was, they knew that they were meant (and probably paid) to find it funny.

Virgin Radio-Johnny Boy (19/June/1999)

Certainty level: 30%

I'm not quite sure about this one, so I've given it a one in three chance of being about me. First the background.... from mid-March 1999 for some three or four months, every weekend, I bombarded Westminster MPs with faxes about the terrible, all-encompassing MI5 Persecution. (Jesting aside, it really is terrible and all-encompassing, in the UK anyway.) Of course each week some MPs replied; but in June 1999, after I'd been at it some three months, I started getting "covert" feedback from Virgin Radio.

The first feedback I got was from Danny Baker, on Sunday 13th June. That weekend I was sending an article which contained biting criticism of the police inaction in this case. Danny Baker on his Virgin radio show started an angry rant that "he knows it's rubbish", ie. he was rubbishing what I'd said in that weekend's faxed article. Unfortunately I wasn't recording this programme.

The next possible Virgin-Radio feedback was a week later on 19th June 1999. This is contained in the audio file above, in which Johnny Boy on his "Wheels of Steel" programme says;

"and if you would like to put a triple play together, ahhh.... because quite frankly Hipster and me are running out of ideas...."

He goes on to counter Hipster's "how dare you" with a protestation that he is "only joking".

What I reckon is that my article faxed to MPs that weekend was forwarded by one of the recipients to Virgin Radio. My article had included the words;

"I am beginning to run out of both new topics and energy to write these articles."

So what I reckon is that Johnny Boy read the article.... and rephrased the above line "run out of ... new topics" to "running out of ideas".
I recognise that this is a pretty tenuous inference to make.... but do listen to the audio file, from the "ahhh...." pause in JB's speech you can guess he is about to say something "risky" and at someone's expense. Anyway, I listen to the Wheels of Steel regularly and will continue to do so, recording it as I always do - so any future funny remarks will get immortalised on these pages!

Brighton Day Trip - 24/Sept/1998

Certainty level: 5%

On a day trip to Brighton, carrying a minidisc recorder, I managed to collect several indistinct instances of what I think were people swearing at me. Between the 0.5 and 1.5 second marks of the above recording is something that sounds like "nutter". I recorded at least three other much more obscene sexual words on the same day.

I don't honestly think the "nutter" recorded here is part of the conspiracy against me. I've been called similar things elsewhere, where it's been blindingly clear that the insult does form part of the conspiracy - but not in this case. This illustrates quite a worrying point - as a result of the many years of abuse "in public", I now sometimes simply don't know whether somebody is insulting me because they think I look like a dweeb, or whether the conspiracy is in action. Sometimes, due to background noise and people talking quietly relative to ambient noise, I can't be sure of what's being said, even after listening to it again on my minidisc. Or put another way, I now have a mild form of what I recognise to be occasional auditory delusions - but these are fuelled by the many years of actual verbal abuse.

POSK Cafe - 2/Feb/1998

Here are two independent segments, both of which occurred in London on the same day, the first at a Polish cafe, the second on the Tube.

Certainty level: 100%

POSK is the Polish Social-Cultural Centre in Hammersmith, London. It has quite a nice cafe which does pierogi, golabki etc. I went there with my mother early in 1998. Seated at the window table were three Polish men talking amongst themselves. One of them let rip with a sexual obscenity which was clearly directed at me (it's the same one that's been heard again and again since about November 1995), and which was recorded on my minidisc walkman. I have not included it in the above excerpt, which shows the reaction of another of the trio to the first man's swearing - namely, "jestes swinia jednak" which in English is "nevertheless you're a swine".

Certainty level: 20%

Somewhere on the London Underground. "Psycho" (I think - a little unclear).

Leicester Square - 9/Feb/1998

In February 1998 I spent some time in Leicester Square, in the West End of London. This is a very busy area of London, and one which can be relied on to produce "contacts". Capital Radio's offices and their cafe are located here, the Trocadero is nearby, and the place is full of cinemas and entertainment venues.

Certainty level: 100%

A young girl is heard to say, "Alright I'm going to talk to myself" to her friends, followed by all of them laughing together, as I passed by.

Believe me, I do not look mad in real life, these young people would not have directed their comments and laughter at me unless they had already been told by others that I was ill. I am absolutely certain that their behaviour was directed at me, and this audio file is particularly clear.

Certainty level: 60%

This one was recorded in a cafe in Green Park. Two women are talking to each other, one of them says to the other, "something wrong with him", with an emphasis on the "wrong".

The words "something wrong with him" have been repeated at me dozens of times, at my former workplace in Canada, in England, etc. The words are quite deliberately chosen to have two meanings; they obviously imply that I am ill, without forcing the abusers to demean themselves by using more pejorative terms, although they have shown that they have no compunction in that area; and secondly, the words "wrong ... him" make me at fault, and place the guilt for the abusers' wrongdoing on my shoulders.

Certainty level: 30%

Recorded on a Victoria line tube train leaving Green Park station. If you listen carefully you can pick up the word "hunchback". The speaker had emitted a swear word immediately before this excerpt; both the swear word, and the "hunchback", were (I believe) directed at me.

BA984 LHR->TXL 13/June/1998

Certainty level: 100%

In June 1998 I travelled on the above British Airways flight to Berlin with my mother, to visit her family. There were two women in seats 30D/E, about 4/5 rows behind us. It was quite obvious from the torrent of abuse during these flight that these women had been instructed to harass me and attempt to obtain a reaction.

I did manage to record much of the flight, but unfortunately much of the recording is unclear because of high background noise on the aircraft. The following three excerpts from the recording are the best I can do.

The segment at position 11:34 minutes on my recording contains a fairly quiet word "paranoid", followed immediately by a much louder "yeah, he's paranoid, yeah". During the flight the abuse was not sexual, as it so often is elsewhere, but attacking my mental health.

One of the women in seats 30D/E said "paranoid" very clearly towards the end of the flight, but unfortunately I had run out of minidisc space and stopped recording by then. There is absolutely no doubt in my mind that these women were directed to harass me. This harassment happens without fail on British Airways flights; I've been on something like three or four BA flights in the last 5 years and it's happened each time. Presumably this is because of international law which says incidents on aircraft during flight are actionable in the airline's country of origin - so my persecutors want a reaction from me, and they want to see me "done" in the UK where they can influence the justice system.

These incidents never happen on foreign-domiciled carriers.

Evil old bat in BHS 18/12/98

Certainty level: 40%

Not quite sure how sure I am about this one. I went down to Croydon (Surrey) with my mother to buy her a beret. After doing the shopping, we went to the BHS store restaurant to lunch on fish and chips.

You can guess the rest. Auditory hallucinations my shrink calls them, faithfully recorded on Sony minidisc. Some old cow going on about "see that chap, the one over there, something's wrong with him".

It is quite tiring being attacked by random idiots in the street, or as in this case, by some random, evil old bat in a restaurant. Fortunately it is only a sporadic occurrence. My enemies seem of late reluctant to waste resources in my direction. Should I take this as an insult? Am I not worth the millions of taxpayers money which has been wasted on me? Are the obsessives of MI5 themselves the "nutters" and "really mad" which they accuse me of being? Interestingly this suggestion as to the psychological profiles of Security Service personnel has been made by others... it does lead one to wonder, doesn't it?

Ravenscourt Park 20/3/99

Certainty level: 70%

On Saturday I went to Hammersmith, specifically Ravenscourt Park. There had recently been a resurgence of persecution activity, following the Capital spams. I went to the cafe in the park and had a cup of coffee outside, with my mother. As I went inside the cafe to return the cups, a woman shouted a sexual obscenity (not present on this audio file - don't ask), and she said loudly "something's wrong with him". You can just about hear it in the audio file; listen very carefully, several times; it is distinguishable.

Much less subtle is the male voice shouting "take care he's a nutter" immediately after the woman's voice. As on the other recordings there's a lot of noise, but what the people say can be clearly heard.

Given that I take medication and look and behave quite sanely, and that there had been increased abuse over the last couple of weeks, it seems pretty unlikely that this incident was just spontaneous.... of course, you couldn't prove otherwise, but then that's the way MI5 mean their abuse to look.

Battersea Library 29/3/99

Certainty level: 60%

This one is quite dull. During the month of March 1999, MI5 made another determined attempt to "get" me, substantially through radio programmes, through Jon Snow on Channel Four News, and through abuse in public, of which this is one example.

Recorded on my minidisc-walkman on Monday 29 March 1999, this audio file
consists of two girls talking. One says to the other, "he's got something
wrong with him." The usual words. How many millions a year do the Security
Service waste on this? But they've denied it - how silly of me to forget.
And they're not liars either, are they?

Royal Festival Hall 15/4/99

Certainty level: 100%

Another "day in the life of", this one. January and February were quiet;

in March it all started again; by the middle of April the resurgence of abuse had been going on for over a month. And this, with 100% certainty, is one manifestation of the abuse.

On Thursday 15 April 1999, 1pm lunchtime, I was at the booking office at the Royal Festival Hall near Waterloo Station in London, buying a ticket for a friend. A woman was at the counter next to me. She said;

"it would kill it, you know, it would just be overkill...
.. they can't stop can they"

It was obvious to everyone, the ticket agents included, that her comments were directed at me, and that "they" (ie. MI5) were "killing" me.

I've heard similar things said at various other times, but rarely have their intentions been expressed as clearly as this. The woman also expressed the obsessive nature of MI5's preoccupation with me, by saying, "they can't stop can they".

Balham - LT bus (8/July/1999)

Certainty level: 90%

I am very sure about this one. I got back from holidays on Wednesday. There were two incidents, both on the tube, on the way back from the airport. There was a further incident the following day, Thursday, on the bus (the 155 I think) in Balham, where two girls started spouting abuse about "crazy", etc. Naturally I had my minidisc with me and was able to record their words.

The cynical reader might think my demeanour or behaviour had given rise to the taunts of "crazy" recorded above. But I assure you my behaviour on the bus would not have made anyone think I was ill; and the taunts the previous day were the same sexual words as previously; so I'm quite sure that these incidents are either deliberately staged, or indicative of an overall high level of awareness among the London public, particularly in the part of London where I live.

Clapham South (17/Feb/2000)

Certainty level: 100%

In February 2000, MI5's hate campaign against me was in full swing. They sent people into the road where I live in south London, to swear at me and abuse me as I was leaving or returning home. One such instance is recorded on the above audio file.

On Thursday 17 February 2000, I had just left my home, en route for Croydon, when two youths approached, going in the other direction. One of them said with a smile on his face something which I didn't recognize, and still don't understand despite it being on this audio clip. His demeanour made it clear his statement was directed at me. I coughed, and in response to that, he continued his insult, calling me a "wanker", which is very clearly recorded on this audio clip.

Two days later, in the very early morning of Sunday 20 February 2000, MI5 inflicted another insult against me just outside my house, when, returning from Croydon, two youths approached (MI5 agents always go in packs of at least two - they're too cowardly to go anywhere on their own) and one of them said quietly and bitterly to the other that "he's shitty, very shitty".

It is still comparatively rare for MI5 to send people to my house, or to my road, to harass me. Usually they know where I'm going to, since they have bugs on my phone and in each room of my house; and they send people to that location, or on the train or tube getting there.

Clapham Junction (6/May/2000)

Certainty level: 60%

On Saturday 6 May 2000, I was in Clapham Junction, shopping and visiting the library. At precisely 12:29pm, the above audio clip was recorded, in front of Arding and Hobbs department store. One girl was saying to her friend,

"He's a homosexual, they can say whatever they want."

There are several reasons why I think this comment might be about me. Firstly, temporal proximity to other such incidents. The persecution had restarted about two to three days before this clip was recorded. Cause of restart unknown. Personally I think it's because I was going on holiday to France the following Monday - MI5 do like to take holidays abroad at the taxpayer's expense, and inventing reasons to resurrect their hate campaign just before I go on holiday is something they've done before.

Secondly, although I am not gay, they have used such references against me before. At Oxford Computer Group in 1994, manager Steve Mitchell simultaneously abused me and another employee but saying we were "of a similar bent". Such insults show latent or quite overt homosexuality on the part of the abuser.

Thirdly, the sort of people who abuse on the basis of mental illness are the same people who abuse others on the basis of sexuality, race, religion, etc. If they can abuse a disabled man, then they will surely do so based on the other criteria mentioned.

There is still some room for doubt, though, which is why I have assigned this recording a certainty level of only slightly above evens. But "they can say whatever they want" is what gives the game away; they just choose a differentiating feature on which to base their abuse; and if one such feature gets too boring ("we've called him a nutter for the last ten years so now we'll call him something else") then they invent a different lie to throw at me.

MI5 are Afraid to Admit They're Behind the Persecution

MI5 have issued a formal denial of any involvement in my life to the Security Service Tribunal, as you might expect them to; but, more importantly, the persecutors have never denied that theyre from the Security Service, despite several years of accusations from my corner on usenet and in faxed articles. I am not surprised that the Security Service Tribunal found "no determination in your favour". I am however a little surprised that the persecutors have refused to confirm my identification of them; by doing so, they implicitly admit that my guess was right.

"No determination in your favour" says the Security Service Tribunal

In 1997, I made a complaint to the Security Service Tribunal, giving only the bare outlines of my case. I do not think it would have made very much difference if Id made a much more detailed complaint, since the Tribunal has no ability to perform investigatory functions. It can only ask MI5 if they have an interest in a subject, to which MI5 are of course free to be "economical with the truth". A couple of months after my complaint the Tribunal replied that;

The Security Service Tribunal have now investigated your complaint and have asked me to inform you that no determination in your favour has been made on your complaint.

Needless to say this reply didnt surprise me in the slightest. It is a well established fact that the secret service are a den of liars and the Tribunal a toothless watchdog, so to see them conforming to these stereotypes might be disappointing but unsurprising.

It is noteworthy that the Tribunal never gives the plaintiff information on whether the "no determination in your favour" is because MI5 claims to have no interest in him, or whether they claim their interest is "justified". In the 1997 report of the Security Service Commissioner he writes that "The ambiguity of the terms in which the notification of the Tribunals decision is expressed is intentional", since a less ambiguous answer would indicate to the plaintiff whether he were indeed under MI5 surveillance. But I note that the ambiguity also allows MI5 to get away with lying to the question of their interest in me; they can claim to the Tribunal that they have no interest, but at a future date, when it becomes clear that they did indeed place me under surveillance and harassment, they can claim their interest was "justified" - and the Tribunal will presumably not admit that in their previous reply MI5 claimed to have no interest.

"He doesnt know who we are"

In early January 1996 I flew on a British Airways jet from London to Montreal; also present on the plane, about three or four rows behind me, were two young men, one of them fat and voluble, the other silent. It was quite clear that these two had been planted on the aircraft to "wind me up". The fat youth described the town in Poland where I had spent Christmas, and made some unpleasant personal slurs against me. Most interestingly, he said the words, "he doesnt know who we are".

Now I find this particular form of words very interesting, because while it is not a clear admission, it is only a half-hearted attempt at denial of my guess that "they" = "MI5". Had my guess been wrong, the fat youth would surely have said so more clearly. What he was trying to do was to half-deny something he knew to be true, and he was limited to making statements which he knew to be not false; so he made a lukewarm denial which on the face of it means nothing, but in fact acts as a confirmation of my guess of who "they" are.

On one of the other occasions when I saw the persecutors in person, on the BA flight to Toronto in June 1993, one of the group of four men said, "if he tries to run away well find him". But the other three stayed totally quiet and avoided eye contact. They did so to avoid being apprehended and identified - since if they were identified, their employers would have been revealed, and it would become known that it was the secret services who were behind the persecution.

Why are MI5 So Afraid to admit their involvement?

If you think about it, what has been going on in Britain for the last nine years is simply beyond belief. The British declare themselves to be "decent" by definition, so when they engage in indecent activities such as the persecution of a mentally ill person, their decency "because were British" is still in the forefront of their minds, and a process of mental doublethink kicks in, where their antisocial and indecent activities are blamed on the victim "because its his fault were persecuting him", and their self-regard and self-image of decency remains untarnished. As remarked in another article some time ago, this process is basically the same as a large number of Germans employed fifty years ago against Slavic "untermenschen" and the Jewish "threat" - the Germans declared, "Germans are known to be decent and the minorities are at fault for what we do to them" - so they were able to retain the view of themselves as being "decent".

Now suppose this entire episode had happened in some other country. The British have a poor view of the French, so lets say it had all happened in France. Suppose there was a Frenchman, of non-French extraction, who was targeted by the French internal security apparatus, for the dubious amusement of French television newscasters, and tortured for 9 years with various sexual and other verbal abuse and taunts of "suicide". Suppose this all came out into the open. Naturally, the French authorities would try hard to place the blame on their victim - and in their own country, through the same state-controlled media which the authorities employ as instruments of torture, their view might prevail - but what on earth would people overseas make of their actions? Where would their "decency" be then?

This is why MI5 are so afraid to admit theyre behind the persecution. Because if they did admit responsibility, then they would be admitting that there was an action against me - and if the truth came out, then the walls would come tumbling down. And if the persecutors were to admit they were from MI5, then you can be sure I would report the fact; and the persecutors support would fall away, among the mass media as well as among the general public. When I started identifying MI5 as the persecutors in 1995 and 1996 there was a sharp reduction in media harassment, since people read my internet newsgroup posts and knew I was telling the truth. The persecutors cannot deny my claim that theyre MI5, because then I would report their denial and they would be seen as liars - but they cannot admit it either, as that would puncture their campaign against me. So they are forced to maintain a ridiculous silence on the issue of their identity, in the face of vociferous accusations on internet newsgroups and faxed articles.

Have MI5 lied to the Home Secretary?

In order for the Security Services to bug my home, they would either have needed a warrant from the Home Secretary, or they might have instituted the bugging without a warrant. Personally I think it is more likely that they didnt apply for a warrant - I cannot see any Home Secretary giving MI5 authority to bug a residence to allow television newscasters to satisfy their rather voyeuristic needs vis-a-vis one of their audience. But it is possible that the Security Service presented a warrant in some form before a home secretary at some point in the last nine years, for telephone tapping or surveillance of my residence, or interception of postal service.

So the possibility presents itself that a Home Secretary might have signed a warrant presented to him based on MI5 lies. Just as MI5 lie to the Security Service Tribunal, so they might have lied to a Home Secretray himself. MI5 and MI6 are naturally secretive services former home secretary Roy Jenkins said, they have a "secretive atmosphere ... secretive vis-a-vis the government as well as [enemies]". Jenkins also said he "did not form a very high regard for how they discharged their duties".

It was only a few years ago that MI5 was brought into any sot the extraordinary thing is that British media organisations like the state- and taxpayer-funded BBC take such an active part in the MI5-inspired campaign of harassment. We have after all heard of MI5 trying to bribe broadcast journalists; but surely there must be a substantial number who are not bought or blackmailed by the Security Services, and who take part in the "abuse by newscasters" of their own volition? The BBC is supposed to be independent of the government of the day as well as the Establishment in general. While perhaps it is childish to think that the BBC is anything other than effectively state-controlled, the degree of collusion between the BBC and the British Secret Police MI5 is something you would not find in many countries. Individual tele-journalists in other countries would have enough self-esteem not to allow themselves to be controlled by their secret police - seemingly, BBC broadcasters like Martyn Lewis and Nicholas Witchell have such a low opinion of their employing organisation that they see no wrong in dragging the BBCs no-longer-good name through yet more mud, at the mere request (whether supported by financial or other inducements) of the British secret Police, MI5.

And when challenged, these broadcasters LIE about their involvement, with just as little shame as MI5 themselves. The BBCs Information dept have said that;

"I can assure you that the BBC would never engage in any form of surveillance activity such as you describe"

which is an out-and-out lie. Buerk and Lewis have themselves lied to their colleagues in the BBCs Information department over the "newscaster watching", but unsurprisingly they refuse to put these denials in writing. Doubtless if the "newscaster watching" ever comes to light, Buerk and Lewis will then continue to lie by lying about these denials. So much for the "impartial" BBC, a nest of liars bought and paid for by the Security Services!

It is obvious that the persecution is at the instigation of MI5 themselves - they have read my post, and only they have the surveillance technology and media/political access. Yet they have lied outright to the Security Service Tribunal. Similarly, BBC newscasters Michael Buerk and Martyn Lewis have lied to members of their own organisation. The continuing harassment indicates they are all petrified of this business coming out into the open. I will continue to do everything possible to ensure that their wrongdoing is exposed.

MI5 Persecution Update: Friday 11 June, 1999

Harassment in a pub in Clapham, Tuesday lunchtime

Once a month, or once every other month, I meet a Polish friends of mine who lives in Clapham North, and sometimes we go to a particular pub near where he lives. The last time was some two months ago; I did not have my minidisc-walkman with me, and consequently was seriously harassed by people MI5 had instructed to harass me, in the pub.

This Tuesday, 8 June 1999, we again went to the same pub for a pre-meal drink. This time I did have my minidisc-walkman with me. As you can guess, we were followed into the pub by a couple of young people (Im getting older and older - isnt it funny how the MI5 agents all look young these days?). They started talking about my situation, in particular some travel I had booked the previous day. Unfortunately, they were talking fairly quietly, and my minidisc didnt pick up their speech.

MI5s schizophrenic reasoning is that simultaneously I am very important and worthy of their acts of persecution, and I am also totally unimportant and their abuse of me "doesnt matter". Perhaps they should test their agents and managers for obsessive personalities or psychotic features in the same way as employees are drug-tested. MI5 might lose their "worst cases" employees if some psychological testing were applied to their recruitment procedure.

Toothless Watchdogs. What a Surprise.

Recently I have been engaging in communications with two watchdogs, the Security Service Tribunal which deals with complaints against the security service (and always clears MI5 of any wrongdoing), and the Data Protection Registrar, which is mandated to investigate misuse of personal data held on computer.

In a letter to Nick Brooks, Security Service Tribunal secretary, dated 20 April, I asked him if the Tribunal, as an allegedly independent body, had the means to investigate complaints against MI5 other than asking MI5 to themselves investigate complaints. To my disappointment, his reply two weeks later answered the question only indirectly, in the negative. Whatever the reader might think of the merits of the case I have been putting before you in faxed articles this last year and half, you will surely recognise that it is a significant anomaly for the Tribunal to have no independent means of investigating complaints, particularly given the view expressed even by previous home secretaries that the security services are untrustworthy.

MI5 Persecution: No Justice for the Victims of MI5

In a previous article I detailed the similarities between the current MI5 Persecution in England, and other historical instances of similar persecution, notably that by the Nazi Germans in the thirties and forties. The Germans persecuted first the mentally ill, the epileptics and those suffering from schizophrenia, then moved on to racial groups; in todays Britain the persecution is again directed at those with mental illness, which the British in their cowardice find easier than taking on racial groups as the Germans did. But just as in Thirties Germany there was no recourse against a malign and omnipotent state, so the MI5 Secret Police in the modern British Fascist State allow no justice for their victims.

No Recourse Against the Security Services Illegal Harassment

It has become apparent to me over the last nine years just how loaded the dice are in todays Britain, a fundamentally fascist country which masquerades as a democracy. Britain is a democracy in name only; the Establishment, the defence and MI5 secret police are always there, regardless of which party has been voted into power most recently - and from "New Labours" conduct in office one finds it difficult to tell them apart from Old Tories, in their crackdowns on the sick and vulnerable in society.

In thirties Germany the victims of the Nazi regime had no legal recourse against their State oppressors; and in todays Fascist British state, the victims of the Establishment and its MI5 Secret Police similarly have no recourse against the illegal state-funded and organised oppression. There is supposed to be a mechanism for dealing with MI5 crimes, in the shape of the Security Service Tribunal and Commissioner; yet these have never found favour of a plaintiff. One might as well ask the Nazi SS to investigate crimes against epileptics or Jews as ask the Security Service Tribunal to investigate MI5 crimes against British citizens; it is quite obvious what the answer is going to be, regardless of what you say to them, and what evidence you provide. The Tribunal and Commissioner are a mere formality, a whitewashing body to give the Secret Services a veneer beneath which they hide their shabby criminality.

"Institutional Racism" and Bigotry in the Metropolitan Police

The recent inquiry into the racist murder of Stephen Lawrence found clear evidence of systematic and deliberate racism in the Metropolitan Police, which cannot have surprised anyone. Commissioner Sir Paul Condon accepted a somewhat lukewarm definition of institutional racism as being "unconscious". In truth, and this truth must surely be obvious to anyone who has any familiarity or encountered the great British police, the Met has not just "unconscious" racism, but very clearly "conscious" and deliberate racism, of the kind that would have done Thirties Germans proud. And it is a bastion of such open racism - when many other parts of society are learning to live in a multicultural environment, the Met is still living in the past in its attitude to the minorities.

But in addition to the systematic racism confirmed by the Lawrence inquiry, there is also something much more relevant to this case, which is systematic police bigotry against the physically and mentally disabled, which I personally have experienced in my dealings with the police over the years. You cannot expect equal treatment if you are mentally disabled. I tried to make a complaint to the police in 1995 about the harassment I had been subjected to for several years. As soon as they found out I had mental illness, they refused to even talk to me. I tried again in March 1999; the police made various threats to me, while ranting about "your paranoid rubbish" in reference to the complaints expressed to them.

The police refusal to do the job they are employed and paid to do is extremely serious, particularly as this case is highly important, indeed key to the whole issue of British self-perception at the end of the 20th century and the beginning of the 21st century. Britain has lost much in the last fifty years - it has lost an empire, it has lost its self-respect and its identity as a people. If the MI5 persecution finally makes it into the light and the Security Services are seen for the rather cheap bullies their behaviour indicates, it will have a massive and harmful effect on British self-perception in the new century.

Security Service Tribunal - Blatant Whitewashing

A few weeks ago I spoke on the phone to Nick Brooks, the Secretary of the Security Service Tribunal, which is supposed to deal with cases of MI5 transgression. I asked him if the Tribunal had ever found in favour of a plaintiff and against the Security Service. He answered that as far as he knew, it had not.

I also asked Mr Brooks if the Tribunal had any means of investigating allegations of criminal activity by MI5, other than asking MI5 themselves if they had engaged in such activity. His rather circuitous written reply states that the 1989 Security Service Act provides that "it shall be the duty of every member of the Service to disclose or give to the Tribunal such documents or information as they may require for the purpose of enabling them to carry out their functions under this Act". Which is a very round-about way of saying - "No" - the Tribunal has no way of investigating MI5 crimes - None At All.

Setting up the S.S. Tribunal, and creating a Security Service Commissioner, was really an act of falsehood by the government. It is generally recognised that MI5 are out of reach of the normal criminal justice system - the police, as we have seen, have no intesot answer to the government; in a previous article I quoted Roy Jenkins speaking of "a secretive atmosphere.... secretive vis-a-vis the government as well as [enemies]", and a "lack of frankness" from MI5.

If the government wanted to, it could reform the secret services and ensure they acted in conformance with the laws which have been enacted for them in the last ten years. But apparently the present government does not see any need to ensure security service compliance with the law. As noted above, the regulatory machinery for MI5 is deliberately weak; the Tribunal has no independent means of investigation, and it is simply a waste of time complaining to the Tribunal or Commissioner.

Every so often, fresh revelations come to light of secret service transgressions. We have heard from Shayler that MI5 bugged Jack Straw and Peter Mandelson; we have heard from Peter Wright that MI5 plotted to see Wilson ejected from office; yet so closed is the system of government that the law is never enforced against MI5 when they "bug and burgle" everyone from politicians to ordinary citizens.

No Justice from the Legal System, either

Britain has a civil and criminal justice system which effectively limits many complaints from being heard. For a civil complaint to be brought before a court, you need a solicitor willing to act on your behalf. Supposedly it is possible to represent yourself as a Litigant-in-Pthe basis of being "frivolous and vexatious" or "disclosing no cause for action in law". This is exactly what happened to me in 1997 when I twice tried to take the BBC to court for spying on me in my living room at home; my case was twice struck out, and on the second occasion an order was made against me that I could not bring further civil litigation against the BBC without leave of the court.

As the reader can guess it is quite impossible for a person with schizophrenia, who complains about the secret services and media interfering in his life, to find a solicitor willing to represent him in legal action against the persecutors. I have quite a lot of evidence of the continuing persecution which I have posted on the website, even if the evidence is quite tentative and perhaps open to varying interpretations. But I have tried several firms of solicitors; some of them have acted unprofessionally and abused me; all of them have refused to represent me. My psychiatrist gave me the name of the firm of Bindman and Partners in central London, and I have approached them twice. On each occasion they refused to accept my instructions. Plainly the problem with Bindmans, which they have admitted, is their bigotry against mentally disabled people; yet this is not just something that is wrong with Bindmans, it is something that is wrong with the legal system as a whole, since the legal system necessitates finding a solicitor willing to represent you in order to bring a case to court, but it does not have a mechanism for providing a lawyer in the case where no solicitor is willing to take on your case. So the British legal system is such as to prevent cases such as mine from ever receiving an airing in a court.

So much for the civil courts. But the criminal justice system is no better. Two years ago the Protection from Harassment Act came into force. But again, while the Act is all very well on paper, in practice it is unenforceable in my case, since it would require Police action to see the law implemented, and if the police cannot even be trusted to conduct a murder investigation competently (in the Lawrence case), then what chance is there of their investigating complaints against the Security Service? Of course, it would be possible for me to personally issue proceedings through a private prosecution either against MI5 themselves, or against one or more of their media tools; but here we see the same problems as with the civil courts, because first of all I would have to find a lawyer willing to act on my behalf. Litigants-in-person do exist in the criminal courts, but the Attorney General can bring such a prosecution to an end by taking it over and entering a plea of "nolle prossequi"; and I suspect that if I were to bring a private prosecution against either MI5 or one of their media tools, then this is exactly what would happen.

So much for British justice. But if anything the wrongs that have been perpetrated on me by the British justice system are quite mild to what others have suffered. Others have been wrongly convicted based on police evasions and lies, and spent many years in jail based on false charges. I should count myself lucky that despite the best efforts of the MI5 secret police, I have not acquired any criminal charges or convictions; which shows that for all their resources and influence, and the clear imperfections in the British legal system, there are still limits on how much subversion MI5 can achieve.

The latest in a long line of injustices

A comment I heard during the recent scandal of the police mishandling of the Lawrence murder investigation is that "its not as if the police themselves murdered him". This is not a particularly wise statement to make about the case, since it could be argued that the four alleged murderers were aided in their crime by the expectation that the police would deliberately botch the investigation - which of course is exactly what the police did.

But in my case, this would be a completely inaccurate thing to say - since the MI5 secret-police have expressly been trying to nine years now to see an end put to my life, either by having me incarcerated and my liberty ended, or by forcing self-termination on me. It is exactly as if the secret police "themselves murdered [me]", since that is what their aim is in their campaign against me.

The public has heard of instances of police mishandling of cases, of police manufacturing evidence, lying in court, extracting false confessions to clear up crimes, et cetera. Various instances of extra-legal activity by the secret services have also come to light in the last few years. The unhappy truth is that what MI5 have been doing to me for the last nine years is really nothing out of the ordinary for them. To me it seems unbelievable that this sort of systematic campaign of harassment, which thousands and thousands of people in this country and abroad are well aware of, could exist for such a long period of time with the media maintaining "omerta". But my case is not the first such instance of persecution by the "British secret police", and judging by the lack of any real controls on MI5, I very much doubt it will be the last.

MI5 Have Systematically Destroyed My Life

This is getting depressing. From the feedback Ive received, the recipients of these faxes are tired of hearing my complaints, and in truth I am tired of sending them. The reason I havent yet ceased sending faxes is because I cannot think of any other effective means of replying to MI5s actions against me, and I feel I have to do something to try to defend myself. Three/four years ago I got the MI5 harassment out of my system by posting about it on Internet newsgroups, and for a few months this tactic was quite effective - I received (and indeed still do today) support from newsgroup regulars, and felt I could make my voice heard and break the MI5 monopoly on access to the British media. But that was years ago, and today nobody gives a tinkers cuss about my internet posts - so I have sought to escalate matters by communicating directly with the politicians who allegedly say how this country is supposed to be run.

Of course, its quite expensive to keep up a campaign of fax messages for many weeks. Each set of faxes takes approx 50 hours to send over the weekend, and costs perhaps 35. My phone bill for the last quarter was 350. These figures are naturally insignificant compared to what MI5 have been spending against me over a similar period. It also takes a lot of time and energy to create a new article every week, and try and find new and fresh aspects and viewpoints on MI5s persecution of me. I am beginning to run out of both new topics and energy to write these articles.

So I have a suggestion to put before the MI5 persecutors who have been wrecking my life since 1990. In a few days time I will be going on holiday to Poland and Germany, for a couple of weeks. Previously, almost every time I have travelled by plane, or gone anywhere on holiday, the MI5 "wreckers" have been most assiduous in destroying these trips. My suggestion is; if MI5 leave me alone on this next trip, I will cease transmitting these articles. If, however, there are any clear instances of harassment (and I am very capable of recognising MI5 harassment when I see it), then I will make public these instances and publish any recordings I may make of them, and, unwillingly and unhappily, continue the articles.

Read about the MI5 Persecution on the Web

Keith Hill MP (Labour - Streatham), my elected representative, as ever refuses to help.

MI5 Refuse to Allow me to have a Normal Life

Its kind of difficult to contemplate having a normal existence when you know your entire house is bugged from top to bottom, for audio and, very unpleasantly, video; when your employment is systematically destroyed, over and over again; when every time you leave the country your travel is disrupted by MI5 plants on the plane yelling abuse at you..... you get the idea. I would like to have some semblance of a normal life, like my Polish and English friends do. But MI5 have made this impossible, and they have leached massive resources from the taxpayer to institute a life not worthy of the name on me.

A few years ago MI5 were very open about their aims in persecuting me. They were shouting "suicide" at me, both in Canada where I lived at the time, and during my occasional visits to London. You cant get much clearer than that. There have been instances as recently as a few weeks ago of this intention being voiced by their side; on 15 April 1999, a woman at the next ticket counter at the Royal Festival Hall said;

"it would kill it, you know, it would just be overkill... they can't stop can they"

meaning that "they" were trying to "kill it" i.e. me and they "cant stop". The audio file is at;

I wonder why they "cant stop". Nobody (who doesnt know already) believes my claims - so what difference would it make, if they were to "stop" persecuting me? Perhaps what this persons remarks indicates, is the depth of the obsession MI5 have with this case. They have chosen at random a person from the general population, and done their worst to ruin my life. What is wrong with these people, that they persecute a national of the country whose citizens they are supposed to protect?

No Chance of a Harassment-Free Job

Since the harassment started in 1990 I have had three jobs, the first near Guildford, the second in Oxford, and the third overseas in Canada. All three jobs have been systematically destroyed by MI5. It is so ironic that MI5 employs a team of agents, each well compensated for their efforts, to persecute just one person paid a mere fraction of what they get for their "work". In fact, it is a joke that MI5 is allocated resources for this sort of effort. If this area of government were run along commercial lines then MI5 would be very rapidly closed down, they produce nothing of any value, instead spending their time obsessed with the bugging and surveillance of their former employees like Shayler, dangerous subversives like Straw and Mandelson, and "threats to national security" like yours truly.

Applying for my first post university job

When I was applying for my first post-university job in the closing months of 1990, I found at two or three job interviews that MI5 had got there ahead of me. Interviewers knew what words to repeat from what had been said at my home recently; MI5 had supplied them with words to hurt me, and the "British secret police" were trying to wreck my job search and discourage me from joining the world of work. This and the continuing harassment in the media and by the public meant that the search for a job took very much longer than it would ordinarily be expected to take for a person with my qualifications.

With my first job near Guildford came the knowledge that MI5 were doing everything possible to make me lose the job. Despite their efforts I managed to stay in work for ten unhappy months, during which they made very clear to me that they were bugging my workplace, my accomodation in Woking, my car, my home..... and they also made clear that they had "got to" my employer in Guildford.

Employment with Oxford

I was able to find a new job, with Oxford Computer Training Services (now ARIS/Oxford), quite quickly. But it became very clear, very quickly, that MI5 were treating this job the same as the first; they tried to get the other employees and in particular the managers to attack me. It was plainly MI5s intention that I be sacked fro this job. But I was not sacked; instead, after almost a year of abuse from OCTS managers, I was forced to seek medical help, and had to take two months off for medical leave. OCTS MD Hugh Simpson-Wells was motivated in keeping me on by the fear that if he sacked me, then I would take him to court for the treatment OCTS managers had meted out to me during 1992.

Emigration to Canada

When I emigrated to Canada in 1994, I did think that perhaps MI5 would leave me alone, given that I had made the effort to leave the UK and try to find a new life overseas. I could not see any reason why they would continue to harass me over in Canada. But clearly the MI5 agents had their salaries to think about, since continue to harass me they most certainly did, at my home in Ottawa, and by getting fellow employees to speak against me, as had happened with previous jobs in the UK.

MI5 are denying me a future in work

Former Chief Constable of Devon and Cornwall John Alderson had this to say regarding MI5's activities;

"MI5 is not under the same restraints as the police. They infiltrate organisations, people's jobs and lives. They operate almost like a cancer."

Currently I am on disability, and I can see that MI5 are denying me a future in work. It would be an insult to logic for me to return to work and find a job, in the knowledge that an entire team of MI5 agents, paid in total many times what I would be earning, would have the objective of seeing me "done down" in the employment, and ejected from the place of work. This situation is completely wrong and nonsensical - I would very much like to have a job, but MI5 are preventing me from even thinking about returning to work. The culture of secrecy in MI5/MI6 means there is no objective oversight of their expenditure, when external oversight and greater transparency might lead to wasteful and illogical operations such as that against me being shelved.

Watched and Harassed at my Home and Accommodation

As you will know if you have been reading these articles, MI5 have watched and harassed me at my home, and at every accommodation Ive had since 1990. Theyve also watched me at neighbours houses in London, and at short-term accommodation such as hotels and bed-and-breakfasts. They have used the "words" gained from these watching activities against me, by passing these words on to other people such as OCTS managers for them to make clear that I am being watched where I live.

Harassed at rented rooms in Oxford in 1992

This was at its worst in 1992 in Oxford, where during the week I lived at rented accommodation in Oxford, and at weekends returned to my parents home in London. I was being severely harassed by managers at my place of work, OCTS; and it was clear from the things they said that they were being supplied by MI5 with details of my home life, that they were being supplied with words to repeat at me.

In 1992 I moved house in Oxford many times, living at a total of five rented accommodations in ten months. In January I started off living in a rented room at Headington near the ring road / A40 intersection; then when it became clear that house was being bugged, moved to a rented room in Botley, some miles away. It was at the house in Botley that I had an "interactive watching" experience with Martyn Lewis while he was reading the news; I threw a term of abuse at him; he first flinched, then gave a gsult of what I had just said, he was no longer "on my side".

So I moved house again. This time to a place in Cowley, near the Rover car works, where I stayed for a few weeks. Because of continuing harassment at work, I soon moved from this accommodation, to yet another rented room on Iffley Road. By this time I was very ill and being abused continuously at work. Again, MI5 followed me to the rented room on Iffley Road, and created new instances of "newscaster watching". There was a television in the room which I watched, and as you can guess the newscasters got at me when I was watching the television. Also once I was assaulted, if thats the word for what happened, on leaving the house; a youth grabbed me by the coat lapels, roughed me up a bit with various terms of abuse. I did not report this assault to the police, because what was happening to me at work was very much worse, and nobody seemed to think that that was worthy of being reported to the police. Later that day at work, Alex G, a fellow employee, said "I heard he was assaulted".... I had not told anyone at work about the incident that morning..... so once again it was made very clear that MI5 were watching my rented accommodation and giving information about what was going on there to managers at work.

So I moved house yet again in late autumn 1992, this time to a rented room in a large house on Woodstock Road. I stayed there for several weeks as the situation at work deteriorated due to OCTS managers abuse, until I was forced to take sick leave from work for two months and attend hospital as an outpatient; at which point I gave notice on the room, and returned to London.

MI5 continued to harass me after the diagnosis of serious illness was made. As reported previously, they harassed me on a flight to Spain in December 1992; and in 1993, when I returned to live and work in Oxford, they again bugged my rooms, as well as my workplace, although the intensity of the harassment was very much less than in 1992.

Watched, followed and harassed in Canada

It dismayed me to find that MI5 would not leave me alone after I had settled in Canada. In January 1995 I rented an apartment at the Bayshore complex in Ottawas west end. For some weeks there was no sign of the "buggers". But then it started all over again. They first bugged my car, which had a car alarm installed - the alarm went off two or three times in a single evening, and the following day gave a signal that the car had been broken into. Then they bugged my apartment, and in particular they installed bugs on the phone line in my apartment.

In September 1995 I moved to a new apartment in Ottawas Bytown Market area, the restaurant and entertainment heart of Canadas capital. This proved a serious mistake. In the west end I had been fairly distant from the centre of town where MI5 concentrated their efforts at turning people against me. In the Market area it was much easier for the persecutors to motivate people to harass me, and over the next couple of years there were frequent instances of harassment by the general public.

From 1995 I had some Polish friends in Ottawa, and as the reader can guess, MI5 have spent much effort trying to break up this friendship. They supplied various things about my home life to these friends, for example where I was living in the Market, directly over the road were the studios of a music radio station, which you had to "look up" to see; and MI5 told these friends that I was "looking up" to see the radio station; so the friends then replayed these words back to me, that I was "looking up". MI5 have also made various sexual slanders against me, and these friends also unwittingly replayed some of the words they had been imprinted with by the MI5 persecutors.

MI5 Will Never Allow Me to have a Normal Life

I have heard many excuses as to why MI5 continuously prevent me from having a normal life. We are told that MI5 are defending the country against a tere to zero.

When I have travelled abroad, they always put their people on the flights, on the journeys I undertake, to continue the harassment, so that I am put off further overseas travel, and chained to my home in London. Yet even this is illogical, because when I lived in Canada, they would still put people on flights back to the UK.... and what possible reason would they have for doing that? Perhaps the truest words to describe the MI5 persecution is that reason has nothing to do with their activities - sane people do not behave in the way the MI5 British Secret Police have been doing.

Summer 1999 - more MI5 harassment?

In only a few days time I will be going to Europe again. This time I have deliberately chosen to travel by a non-UK airline; so we will see if they put their paid agents on this foreign carrier, we will see if they try to harass me on this non-British flight.

If they do harass me on this trip to Europe, or if they resume the harassment in London after I return home, then I will continue to report their activities in these faxes. As I said at the beginning of this article, I would very much like to not have to send these articles any more, but that is not my decision to make - it is entirely up to MI5 to cease their pointless persecution of me, once and for all.

```
-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-
-= the. BBC, television and radio -=
-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-
```

The first incident in. June 1990 was when a BBC newsreader made what seemed to be a reaction to something. which had happened in my home, and out of context of what they were reading. My first reaction. was disbelief; nothing of the. sort had ever happened before, the idea that such a thing could occur had not crossed my mind, yet there was no doubt. of what had just taken. place. My disbelief eroded as this recurred time after time. Besides the. news, offenders included shows such as Crimewatch (!), Newsnight, and "entertainment" shows. There seems to. be very little moral understanding among the people who make these programmes; they. just assume they will never be caught, so they carry. on without a thought for the illegality or amorality of what they do. The only. time I ever heard a word raised in doubt was by Paxman being interviewed by someone else (I. think by Clive Anderson) back in 1990; referring to the "watching" he. said it troubled him, and when asked by the host what you could do about it, replied. "Well, you could. just switch it off" (meaning the surveillance monitor in the studio). He clearly didn't let his doubts stand in the. way of continued surreptitious. spying from his own or other people's shows, though.

Now you're convinced this is a troll, aren't. you? This story has been the subject of much. debate on the uk.* Usenet newsgroups for over a year, and some readers believe it. to be an invention (it has even been suggested that a group of. psychology students are responsible!), others think it symptomatic of a derangement of the author, and. a few give it credence. Quite a few people do know part. or all of the story already, so this text will fill in the gaps. in their knowledge. For the rest, what may persuade you of the. third possibility is that some of the incidents detailed are checkable against any archives of radio and TV programmes. that exist; that the. incidents involve named people (even if those hiding in the shadows have not. made their identity or affiliations evident), and those people may be. persuaded to come out with the truth; and that the campaign of harassment is continuing today both in the UK and on. the American continent, in a none-too-secret fashion;. by its nature the significant risk of exposure. increases with time.

On several occasions people. said to my face that harassment from the TV was happening. On the first day I worked in. Oxford, I spent the evening in the local pub with the company's. technical director Ian, and Phil, another employee. Ian made. a few references to me and said to Phil, as if in an aside, "Is he the bloke who's been. on TV?" to which Phil replied, "Yes, I think. so".

I made a number of. efforts to find the bugs, without success; last year we employed professional counter-surveillance people to scan. for bugs (see later) again without result. In autumn 1990 I disposed. of my TV and watched virtually no television for the next three years. But harassment. from TV stations. has gone on for over six years and continues to this day. This is something that. many people obviously know is happening; yet the TV staff have the morality. of paedophiles, that because they're getting away with it they feel. no wrong.

Other people who. were involved in the abuse in 1990 were DJs on BBC radio stations, notably disc jockeys from Radio 1 and other. stations (see the following section). Again, since they don't have sense. in the first place they can't be expect to have the moral sense not. to be part of criminal harassment.

-=-
-= MI5: bugging. and counter-surveillance -=
-=-

PO: >Did you ever look for the bugs in your house ? If not,. why not ? I mean if
PO: >I thought that was happening to me, I'd search the. place from top to bottom,
PO: >I mean I live there I would know if anything was out of. place. If I was
PO: >really suspicious, I would. call in one of those bug detection teams which
PO: >have those machines that pick. up the transmitted radio waves. This
PO: >reminds me of BUGS, that new programme on BBC1. on

That's exactly what we did.. We went to a competent, professional detective agency in London,. paid them over 400 quid to debug our house. They used scanner devices which go to over 1 GHz and would pick up. any nearby transmitter in that range, they also checked the phones and. found nothing... but if the tap was at the exchange, then they. wouldn't find anything, would. they?

CS: >Doesn't this suggest to you that there are, in fact, no bugs. to be found?

You can assume that they've done this sort of thing to other people in. more "serious" cases, where. they would know the targets would suspect the presence of electronic. surveillance. So they will have developed techniques and devices which are not readily detectable either. by visual inspection or by electronic. means. What those techniques might be, I couldn't guess.

In this case, the existence of bugging devices. was clear from the beginning, and they "rubbed it in". with what was said by the boy on the coach. It. was almost as if they wanted counter-surveillance people to be called in,. who they knew would fail to detect the bugging devices, causing loss of credibility to the other things I would. have to say relating to the harassment.

I did all the things someone in my situation would do. to try to find the bugs. In addition to calling in. professional help using electronic counter-surveillance, I. made a close visual inspection of electrical equipment, plus any. points where audio or video surveillance devices might have. been concealed. Of course, I found nothing. Normal surveillance "mini-cameras" are. quite noticeable and require visible supporting circuitry. It. seems to me the best place to put a small video surveillance device would be additional to a piece of. electronic equipment such as a TV or video. It would be necessary to physically break in. to a property to fit such. a device.

-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=
-= Capital Radio - Chris. Tarrant -=
-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=

Capital Radio DJs have. been "in on it" from the start. One of the first things. I heard in the summer of 1990 was from a Capital DJ who said, "If he listens to Capital then he can't be all. bad" (supportive, you see. We're not bastards). Much of what came over the. radio in 1990 is now so far away the precise details have been obliterated by time. No diary was kept of. the details,. and although archives if they exist may give pointers, the ambiguity of what broadcasters said would leave that open. to re-interpretation.

In spring 1994, Chris. Tarrant on his Capital morning show made an aside to someone else in the studio, about a person he didn't. identify. He said, "You know this bloke? He says we're. trying to kill him. We should be done for attempted. manslaughter".

That mirrored something I had said a day or. two before. What Tarrant said was understood by the. staff member in the studio he was saying it to; they said, "Oh no, don't say that" to Tarrant. If. any archives exist of the morning show (probably unlikely) then it could be. found there; what he said was. so out of context that he would be very hard put to find an explanation. A couple of days later, someone at the site where. I was working repeated the remark although in a different. way; they said there had been people in a computer room when automatic fire extinguishers went off. and those people were. "thinking of suing for attempted manslaughter".

Finally, this. isn't confined to the established radio stations. In 1990 after I had listened to a pirate radio. station in South London for about half an hour, there was an audible phone. call in the background, followed by total silence for a few moments, then shrieks of laughter. "So what. are we supposed to say now? Deadly torture? He's. going to talk to us now, isn't he?", which meant that they could hear what I would. say in my room.

-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=
-=. MI5: cost of the operation -=
-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=

Here's what a couple of other people on Usenet (uk.misc) had to. say regarding the cost of running such. an operation...

PO: >Have. some sense, grow up and smell reality. What you are talking about
PO: >would take loads of planning, tens of. thousands of pounds and lots of

PO: >people involved in the planning,. execution and maintenance of it. You
PO: >must have a very high opinion. of yourself to think you are worth it.

PM: >But why? And. why you? Do you realize how much it would cost to keep
PM:. >one person under continuous surveillance for five years? Think about
PM: >all the man/hours. Say they _just_ allocated a two man. team and a
PM:. >supervisor. OK., Supervisor's salary, say, #30,000 a year. Two men,
PM: >#20,000 a year each. But they'd need to work in. shifts -- so it would
PM: >be six men at #20,000 (which with on-costs. would work out at more like
PM: >#30,000 to the employer.).
PM:. >
PM: >So, we're talking #30,000 x 6. #180,000. plus say, #40,000. for the
PM: >supervisor. #220,000. Then you've got the hardware involved.. And
PM: >any transcription that needs doing. You. don't think the 'Big Boss'
PM: >would listen to hours. and hours of tapes, do you.
PM:. >
PM:. >So, all in all, you couldn't actually do the job for much less than
PM: >a quarter million a year. Over five. years. What are you doing that makes
PM: >it worth the while of the state to spend over one and a quarter. million
PM: >on. you?

Those are pretty. much the sort of calculations that went through my head once I stopped to consider what it must be. costing them to run this operation. The partial answer is, there have been periods. when the intensity has been greater, and times. when little has happened. In fact, for much of 1993 and. the first half of 1994, very little happened. Although I don't think that was for reasons of. money - if they can tap into the taxpayer they're not. going to be short of resources, are they?

The more complete answer is in. the enormity of what they're doing. Relative to the cost. to British pride of seeing their country humiliated for the persecution of their. own citizens, isn't is worth the cost of four or five people to try to bring things to a close in the manner they would. wish? To the government a million or two. is quite honestly nothing - if they can convince themselves of the necessity of what. they're doing, resources will not be the limiting. factor.

-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-
-= how and why did it start?. -=
-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-

The harassment didn't start. by itself, so someone must have been there at the outset to give it a firm push and set. the "animals" after me. It looks as if I was set up in June 1990, and the timing. indicates someone from university. was responsible.

>One thing which. has been missing from this discussion is this simple
>prognosis: that maybe he is right and that, despite. his admitted
>mental condition,. there really is a campaign against him organised by
>now-influential ex-students of. his university.

In May or June 1990,. Alan Freeman on Radio 1 read out a letter from someone who. had known me for a few years, who wrote of the one who "wore out his welcome with random precision" (from the Pink Floyd song).. Freeman went on to say to the writer. "that's a hell of a letter you wrote there". The indication is strongly that people I had parted. from soon before nursed a grudge against me and were trying to cause trouble. for me.

The suggestion is that Freeman might have shown the letter. to other people, and things could. have snowballed from there. Right from the start the real source (security services presumed). didn't announce themselves as the origin, but let the "talkers", the radio DJs, believe. that they were the originators. Think about it; if you. announce, "we're MI5 and we have a campaign. against this bloke" then people might not go along with it; but if you say, "everyone else. is getting at this bloke because he 'deserves' it" then people will join in with. fewer qualms.

>Why would. "they" wish to assassinate your character?

It's the classic case of hitting a. cripple to prove you're stronger. Why would the security services expend hundreds of thousands of pounds. and more than six years of manpower to try. to kill a British citizen? Because they are motivated by people who knew me at. university and feel personal animosity; because they knew me to be emotionally weak,. and it is in the nature of bullies to prey on. those known to be weak; and because they can rely. on the complicity of the establishment, which the security services manipulate and derive funding from. This is England's. biggest humiliation today, and the British security. services are intent on preventing their humiliation becoming reality by. continuing their campaign of attempted murder to suppress the truth from. becoming public.

-=-=-=-=-=-=-=-=-=-=-=-
-= who knows about. it? =-
-=-=-=-=-=-=-=-=-=-=-=-

Many people know,. both in the establishment and media, and among the general public. Despite an absence of its target from the UK for. more than two. years, the echoes of paranoia can still be heard loud and clear from across the water. When it started in 1990, the only people who knew. were those in BBC television who were. spying on my home, and a few radio broadcasters. There were a few cases of. public harassment, but very little compared to the situation that developed a couple of. years later.

The list today includes BBC TV staff (newsreaders such. as Martyn Lewis, Michael Buerk, Nicholas Witchell),. people from radio stations such as Chris Tarrant of Capital and Radio 1 DJs, people. in the print media, but also many people in the. general public. All united in a conspiracy which breaks the laws. which the UK does have regarding harassment, and all completely uncaring for any semblance of decency or. elementary respect for individual. rights.

The British police (obviously) do know the nature of. the harassment and in all probability the identity. of those behind it. Some time ago I made a complaint. to my local police station in London, without positive result. The UK police are. failing in their duty to see the law enforced in not checking. the abuse.

The article of which part is reproduced below was penned by. Bernard Levin
for the Features section of the Times on 21 September 1991. To my mind,. it
described the situation at the. time and in particular a recent meeting with
a friend, during which I for the first time admitted. to someone other than
my GP that I had been subjected. to a conspiracy of harassment over the
previous year and a. half.

>There. is a madman running loose about London, called David Campbell; I have
>no reason to believe that he. is violent, but he should certainly be
>approached with caution.. You may know him by the curious glitter in his
>eyes. and a persistent trembling of his hands; if that does not suffice, you
>will. find him attempting to thrust no fewer than 48 books into your arms,
>all hardbacks,. with a promise that, if you should return to the same
>meeting-place next year,. he will heave another 80 at you.
>

At the time this article was written I had believed for. some time that columnists in the Times and other journalists had been. making references to my situation. Nothing unusual about this you may think,. plenty of people have the same sort of ideas and obviously. the papers aren't writing about them, so why should. my beliefs not be as false as those of others?

What makes this article so extraordinary is that. three or four days immediately preceding its publication, I had a. meeting with a friend, during the course of which we discussed the media. persecution, and in particular that by Times. columnists. It seemed to me, reading the article by Levin. in Saturday�s paper, that he was describing in some detail his "artist�s impression" of that meeting. Most. telling are the final sentences, when he writes, "The madman bursts into tears, and swears it. is all true. And it is." Although I did not "burst. into tears" (he seems to be using a bit of poetic licence. and exaggerating) I did try hard to convince my friend that it was all true; and I am. able to concur with Mr Levin, because, of course, it. is.

At the beginning of the piece Levin. reveals a fear of being attacked by the "irrational" subject of his story, saying. "I have no reason to believe that he is. violent, but he should certainly be approached with caution". This goes back to the. xenophobic propaganda of "defence" against a "threat" which was seen at the very beginning of the harassment. The. impression of a "madman running loose" who needs to be. controlled through an agency which assigns to itself the mantle of the "police" is also one which. had been expressed. elsewhere.

In the final paragraph. of this extract, his reference to Everyman�s Library as having "died a lingering and shameful death a decade or so ago". shows clearly what sort. of conclusion they wish to their campaign. They want a permanent solution, and as. they are prevented from achieving that solution directly, they waste significant. resources on methods which have been repeatedly shown. to be ineffective for such a purpose.

The article. of which part is reproduced below was penned by Bernard Levin for the Features section of. the Times on 21 September 1991. To my mind, it described the situation at. the time and in particular a recent meeting with a friend, during which I for the. first time admitted to someone other than my GP that I had been subjected to a conspiracy of. harassment over the previous year and. a half.

>There is a madman. running loose about London, called David Campbell; I have no reason to believe that he is violent, but. he should certainly be approached with caution. You may know. him by the curious glitter in his eyes and a persistent trembling of his hands; if. that does not suffice, you will find him attempting to thrust no fewer. than 48 books into your arms, all. hardbacks, with a promise that, if you should return to the same meeting-place next year, he will heave another. 80 at you.
>
>If, by now, the police have arrived and are keeping a close watch. on him, you may. feel sufficiently emboldened to examine the books. The jackets are a model of uncluttered typography, elegantly and simply laid out;. there is an unobtrusive colophon of a rising sun, probably. not picked at random. Gaining confidence -. the lunatic is smiling by now, and the policemen, who know about such things, have significantly removed their helmets -. you could do worse than take the jacket off the first book. in the pile. The only word. possible to describe the binding is sumptuous; real cloth in a glorious shade of dark green, with the title and author in. black and gold on the. spine.
>
>Look. at it more closely; your eyes do not deceive you - it truly does have real top-bands and tail-bands, in yellow,. and, for good measure, a silk marker ribbon in a. lighter green. The paper is cream-wove and acid-free, and the book is sewn, not. glued.

-= why won't the British police. do their job and put a stop to it? -=
-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-
```

The British police obviously do. know what is taking place. Besides my interpretations of what individual officers have. said which forces that conclusion, it would be inconceivable for them to be unaware. of something on. this scale.

If they know, then they will know that. the abusers have broken laws in the UK and abroad. Recently the. UK introduced laws against electronic spying which carry a penalty. of several years jail if caught. If the police know illegal harassment is taking place, and do nothing about it, then. they are failing in. their responsibilities.

Last Easter (1995) I went into the local police station. in London and spoke to an officer about the harassment against me.. But I couldn't provide tangible evidence; what people said, in many. cases years ago, is beyond proof, and without. something to support my statements I cannot expect a police officer to take the. complaint seriously.

The current situation with. regard to the police is not one which allows a breakthrough in dealing with the problem.. On the one hand, most individual officers at a local police station may not know about the ongoing. assaults, so a complaint at that. level will not yield results. Yet the police as an organisation do know of the harassment, and they must be. aware that a complaint has been. made at a police station. So it is clearly their duty to take preventative action against. the continuing molestation, but because the. criminals are operating on behalf of a state agency, the police are not carrying out their. duty.

-=-
-= abuse in. set-up situations and in public -=
-=-

Strangers in the street have recognized me on sight many times, and. shown awareness of the current thread of abuse. To give. you one example, in 1992 I was. seriously ill, and a manager at work somewhat humorously said that "it wasn't fair" that people were. bullying me. A few days later, I attended for the first time a clinic in London as an outpatient, and on my. way out was accosted by someone. who asked if "they had paid my fare", with emphasis on the. word "fare". He repeated the word several times in this different context; that they should have paid. my "fare", each time emphasizing the word.

For two and a half years from the time their harassment started. until November 1992 I refused to see a psychiatrist, because. I reasoned that I was not ill of my own action or fault, but. through the stress caused by harassment, and that. a lessening of the illness would have to be consequent to a removal of its immediate cause, in. other words a cessation of harassment. I also reasoned that since they were taunting me. with jokes about mental illness, if I were. to seek treatment then the abusers would think that. they had "won" and been proved "right". Remember, the constant theme of any persecution is, "we must destroy you. because you're X", whether. X is a racial or other attribute. In this case the X was "we persecute you. because you have brain disease". The similarity of this logic to Nazi attitudes to the mentally ill. is striking.

The same manager who'd said "it wasn't fair". asked me in winter 1992 why I didn't seek help from a. psychiatrist; was it, he asked, because "they would think they. had won" if I sought treatment? That was something I'd never said at work... again, taken separately it proves nothing, but. many such things over a. period of months proves conclusively that people in the company knew what was going on, and in quite. a lot of detail.

Usually harassment in public lacks the level of finesse. of "paying your fare". Most people's imagination does. not go beyond moronic parroting of the current term of. denigration. That is not surprising given the average level of the abusers; if they do not have. the intelligence to distinguish wrong. from right then neither will they have the capacity for anything other than mindless repetition of a monosyllabic term calculated. to fit into their. minds.

The first incidents of verbal. assault in public were in again in the summer of 1990,. although they increased in frequency and venom with time. In July 1990 the first public incident occurred on a tube train on. the Northern line. Two men and their girlfriends recognised me; the women sprang to. my defence, saying "He looks perfectly. normal, he doesn't look ill". Their boyfriends of. course knew better, and followed the party line; one of them made reference to an "operation", apparently to work at the tube. station but implicitly to a visit that I had. made to hospital a couple of weeks previously.

In August 1990 going home. from college, soon after getting on a tube train at Gloucester. Road I was followed by a group of four youths, who started a chant of abuse. That they were targeting. me was confirmed by other people in the. carriage, one of whom asked the other "who are they going on at, is it. the bloke who just got on?" to which the second replied "yes, I think so". I was tempted to reply, but as in every. other instance the abusers are enabled in their. cowardice by physically outnumbering the abused; any confrontation. would result in my being beaten up, followed by a complaint to the police that "he attacked us", and of. course he's ill, so he must have been imagining that we. were getting at him. Shitty, aren't they?

But the shittiness of the four. youths on the tube train is as nothing compared to the episode on the National Express. coach to Dover in the summer of 1992. While going on holiday to the Continent I was. verbally set upon by a couple. travelling sitting a few rows behind. The boy did the talking, his female companion. contributing only a continuous empty giggling noise. He spoke loudly to ensure other people. on the coach heard, always about "they" and "this bloke". but never naming either the abusers or the person he. was talking about. He said "they" had "found somebody from his school, and he was always really stressed. at school". They must have dug deep to. find enemies there; perhaps someone who dropped out of school, someone who didn't do too well later, who was jealous and keen to. get their own back? The boy also said "he was. in a bed and breakfast for only one night. and they got him". By a not unexpected coincidence I had been in a B&B in Oxford a week previously, which had been booked from work;. other things. lead me to the conclusion that the company's offices were bugged for most of the 2 1/2 years that I was there,. so "they" would have known a room in the B&B had been booked. (But. I'll bet "they" didn't tell the company's managers their. offices were bugged, did they?).

After a few minutes of this I went back. to where they were sitting and asked where they were travelling. The boy named a village. in France, and the girl's giggling. suddenly ceased; presumably it permeated to her brain cell what the purpose. of the boy's abuse was.

This and other set-up situations. are obviously calculated to provoke a direct confrontation which would bring in. the police, with the abusers claiming that they were the ones attacked. Again in 1992,. outside the house where I was living in Oxford I was. physically attacked by someone - not punched, just grabbed by the coat, with some verbals. thrown in for good measure. That was something the people at work shouldn't have. known about... but soon after. a couple of people were talking right in front of me about, "I heard he was attacked". The UK police have a. responsibility for preventing assault occurring, but. they do not seem to take any interest in meeting that responsibility. I suppose. their attitude is that harassment does not come within their remit unless it involves physical assault,. and they will only become involved once that happens. That is of course. quite the wrong attitude for them to take, but as. I now understand, the police investigate only the crime they wish to investigate; if they. do not take your complaints seriously then there is nothing. you can do to make them take. action.

-=
-= purpose in publicizing it; censorship in uk.* newsgroups. -=
-=

The postings to uk.misc newsgroup generated a very defensive reaction. from Usenet readers in the UK. So much so, that. they tried strenuously to suppress what was being said, both by breaking the rules. of netiquette in their responses on. the forum, and directly by action to revoke the account from which. the postings were issued.

Yet the postings were within the normal. boundaries of behaviour for uk.misc,. and other less partisan spectators did not see justice in the censorship which was effected, as the following. excerpt shows;

:Karen. Lofstrom (lofstrom@lava.net) wrote
:>It does seem that the. frequency and the size of his posts are
:>approaching net abuse. However, IMHO, they aren't. quite there yet. If
:>his postmaster were to act in this instance, it would raise. troubling
:>censorship. issues.

The inescapable conclusion of the censorship. effected on the uk.*

newsgroups is that the British are intent on their wrongdoing. remaining concealed, and therefore seek to subvert and suppress freedom. of speech, not only in their own country where the media shows xenophobic bias. and bile against all perceived enemies within and without, but. also in other countries which have their own statutes to guarantee the basic human. right of. free speech.

It is absolutely necessary to bring their hate. campaign out into the open where it can be placed under. scrutiny and the harassers seen for what they are. That is the only way of making it impossible for the. security services to carry it out. There is a wider dimension, though.. Xenophobia as demonstrated by British people and institutions over the. last few years belongs to the same stable as racial hatred. In one case, two youths. on a Tube train made that racism explicit by referring to their. victim as a "soft toy, not up to British Standards".. Doubtless others victimize partly on the basis of race (isn�t it odd that they chose to. torment someone who is not ethnically English?) while. expressing their abuse in terms of another genetic attribute,. namely mental illness. All xenophobia on a genetic. basis is wrong, but while racial insults are illegal, abusing the mentally. ill is neither against the law nor subject to similar condemnation when it. is exposed.

-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-

-= my. response to the harassment -=

-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-

My first reaction in. 1990/91 was to assume that if I broke contact then they would not be able to follow and would lose interest. So. I did the things that have. been suggested by other people; I sold my television, stopped listening to the radio and tried to withdraw away. from the sources of abuse as much as possible. I reasoned that. they must have more important things to deal with and that normal people. would simply leave me alone if it were made difficult for them. to continue their harassment.

I reckoned. without the sheer vindictiveness of the abusers. They did not let up but. instead "got to" people around me, mainly people at work, to do their dirty work for them. I went to. see my GP, who refused to believe what he was. being told, and refused to direct me on to anyone who could be of practical assistance. It was not until. three years had passed that the GP admitted the matter. was outside his competence and suggested going to the police.

In the summer of 1994 we called in counter-surveillance experts. from a private detective agency to sweep. our house and telephone for bugging devices. They conducted a thorough. search and found nothing; but as noted above, since the existence of surveillance was being forced in my. face by the harassers, you would expect them to have taken the possibility of. a counter-surveillance sweep into account when planning. the type of devices to be. employed.

In Easter 1995 I made a complaint to my local Police. station in London, but the police have not expressed any intention to. do anything about the continuing. harassment ("we're not saying it's happening and we're not saying it. isn't happening" were the words used). I think the officer I spoke to at Easter wasn't aware of. it happening, although other members of the police force obviously. do know.

From April 1995 until the present. time the matter has been discussed in a lot of detail on the Usenet. (Internet) "uk.misc" newsgroup. That discussion has given birth. to the article which you are now reading. My hopes in posting to Usenet were that wider. publicizing would discourage the security services from continuing their harassment,. and "draw people out" into concurring with the truth of what was being said. Neither. of those have followed, but the discussion has served a purpose in. allowing this structured report to be. created.

-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=
```

They deliberately set out to harass in a way that would resemble. the symptoms of schizophrenia, so that any report of the harassment would. be taken. as indicating mental illness and "treated" accordingly. They never show their own faces; they only work. through proxies, in the media, among the public, and by manipulating people in the. workplace. Since they do not declare their identity there is. no evidence to initiate legal action against the security services or anyone else. The. only people you can prosecute. are the proxies and they will deny knowledge of any conspiracy.

By repeatedly humiliating and. abusing the victim, they induced mental illness. This is the worst form of human. rights violation: making any statement of the harassment appear to be symptomatic of the. illness which they cause. through the harassment. That this can happen, and people collude by silence, is absolutely. horrifying.

From the beginning. in June 1990 they set a pattern of harassment which they have followed without change for the last six years. They paint. me as a "threat" to which people must "react" (shades of Nazi. persecution methods), while simultaneously portraying their. hate campaign on which they have spent over a million pounds of taxpayers� money as. a "joke".

The MI5 that breaks the law with the silent complicity. of the police is the same agency that is now seeking a role in the fight against. crime. Perhaps the real joke is the proposed involvement. in the implementation of justice of. an organisation which commits criminal acts with secrecy and disinterest for. the legal process.

-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=
-= why the. security services? -=
-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=

You may ask, why do I think the "they" referred to are the. security services? Is there any evidence that. there is a single source, as opposed to a loosely based. "whispering campaign" amongst many people? Even if there is. a single source, is there any evidence that "they" are professional "buggers" as opposed to amateurs, or perhaps people working for. a privately funded. organization?

a) As to the question of a single source versus something. more fragmented; it is quite obvious that there is a single source. from the way the campaign has been carried out. Since things have been repeated verbatim which. were said in my home, there. must be one group which does the watching and listening. Since on several occasions (mainly during travel). people have been planted in close proximity and rehearsed in what they were. to say, it follows. that someone must have done the planning for that, and again a single source. is indicated.

b) So why couldn't it be amateurs?. Why couldn't it be a private organisation, for example a private detective. agency paid to manage the campaign and undertake the technical aspects?. Some detective agencies are unscrupulous as has been proved on the occasions in the. past when they've been exposed or caught; they too can have access to the. bugging technology deployed; and there are reported cases of MI5 paying private eyes to. do their. dirty work (against peace campaigners and similar enemies of the state) on. the understanding that if they were caught then they could deny all knowledge. Why couldn't that be. the case?

The main factor pointing. to direct security service involvement (as opposed to amateurs or MI5 proxies). is the breadth of their access to the media in particular, and the fact that the television companies are so. involved in the campaign. The BBC would. not directly invade someone's home themselves, since it would not be within their remit. to allocate personnel or financial resources to do so. An organisation of their stature would not. take part in a campaign set up by private sources. The only people. they would take material from would be the. security services, presumably on the assumption that if the cat. ever flew out of the bag yowling it would be MI5 who would take. the consequences.

State. sponsorship for these acts of psychological terrorism is also indicated by duration; support for over six years for a team. of three or four people would be beyond the means and. will of most private sources. The viciousness of the slanders and personal denigration also. points to MI5; they traditionally "protect" the British state from politicians of. the wrong hue by character assassination, and in this case. are using their tried and tested methods. to murder with words an enemy they have invented for. themselves.

And there are precedents. Diana and Hewitt were alleged to. have been filmed "at it". by an Army intelligence team which had operated in Northern Ireland, these allegations were. made by someone called Jones who had been on the team. His statements were denied by the defence establishment. who tried to character-assassinate. by describing him as the "Jones twins". Funny. how if you tell the truth, then you must be ill, isn't it? Thought only communists behaved like. that?

Hewitt later said that he'd been. spoken to by someone in the army who revealed the existence of videotapes of him and Diana, and. that the tapes would be published if any attempt was made by them to. resume their association.

-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=
-= why the security services?. -=
-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=-=

You may ask, why do. I think the "they" referred to are the security services? Is there. any evidence that there is a single source, as opposed to a loosely based "whispering campaign" amongst many people?. Even if there is a single source, is there. any evidence that "they" are professional "buggers" as opposed to amateurs, or perhaps people working. for a privately funded. organization?

a) As to the question of a single. source versus something more fragmented; it is quite obvious that. there is a single source from the way the campaign has been carried out. Since things have been repeated. verbatim which were said in. my home, there must be one group which does the watching and listening. Since on. several occasions (mainly during travel) people have been planted in close. proximity and rehearsed in what they were to say, it follows that. someone must have done the planning for that, and again a single. source is indicated.

b) So why couldn't it be amateurs? Why couldn't it be a. private organisation, for example a private detective agency paid to. manage the campaign and undertake. the technical aspects? Some detective agencies are unscrupulous as has been proved on the. occasions in the past when they've been exposed or caught;. they too can have access to the bugging technology deployed;. and there are reported cases of MI5 paying private eyes to do their dirty work (against. peace campaigners and similar enemies of the state) on the understanding that if they were caught then they. could deny all knowledge.. Why couldn't that be the case?

The main factor pointing to. direct security service involvement (as opposed to amateurs or MI5 proxies) is the breadth of their access to the media. in particular,. and the fact that the television companies are so involved in the campaign. The BBC. would not directly invade someone's home themselves, since. it would not be within their remit to allocate personnel or financial resources to do. so. An organisation of their stature would not take part in a campaign set. up by private sources. The only people they would take material from would be. the security services, presumably on the assumption that if the cat ever flew out of the bag yowling it would. be MI5 who would take the. consequences.

State sponsorship for these acts. of psychological terrorism is also indicated by duration;. support for over six years for a team of three or four people would be beyond the means and will. of most private sources. The viciousness of the. slanders and personal denigration also points to MI5; they traditionally "protect" the. British state from politicians of the wrong hue by character assassination, and in this case. are using their tried and tested methods to. murder with words an enemy they have invented for. themselves.

And there are precedents. Diana and Hewitt. were alleged to have been filmed "at it" by an Army. intelligence team which had operated in Northern Ireland, these allegations were made by someone called Jones who had. been on the team. His statements were denied by the. defence establishment who tried to character-assassinate. by describing him as the "Jones twins". Funny how if you tell the truth, then you must be ill, isn't it?. Thought only. communists behaved like that?

Hewitt. later said that he'd been spoken to by someone in the army who revealed the existence of videotapes of him and Diana, and that. the tapes would be published if any attempt was made by them to resume. their association.

-=-=-=-=-=-=-=-=-=-=-=-=-=
-= harassment at. work -=
-=-=-=-=-=-=-=-=-=-=-=-=-=

Once I stopped watching television. and listening to the radio at the end of 1990, "they" had to find other ways. of committing abuses. So they took what must be for them a tried and tested route; they get at you by. subversion of those around you.. Since they wouldn't be able to do that with my family or friends, that meant getting at people in the workplace to be. their mouthpieces and. do their dirty work for them.

They supplied my employers in Oxford with. details from what was going on in my private life, and what. I and other people had said at my home and accommodation in Oxford. So. people at work repeated verbatim words which had been said in my home, and repeated what I'd been doing recently.. Often the most trivial things, the ones from your domestic life,. are the ones which hurt most. One manager in particular at Oxford continuously. abused me for ten months with verbal sexual abuse, swearing, and threats. to terminate my employment. After ten months. I was forced to seek psychiatric help and start taking. medication, and was away from work for two months. I spoke later with a. solicitor about what had happened at that company; he advised it was only possible to take action if you. had left the company as a result of harassment, and such an action would have. to be started very soon after leaving.

Over a year later the same manager picked. on another new worker, with even more serious results; that employee tried to commit suicide. with an overdose as a result of the ill-treatment, and was forced to leave his. job. But. he didn't take action against the company, either. Abuse at work is comparable to that elsewhere. in that tangible evidence is difficult to produce, and the. abusers will always have their denials ready when challenged. And even if a court accepts what. you say happened, it still remains to prove that abuse causes the. type of breakdown I had at the end of 1992. In a recent case before a British court, a former. member of the Army brought a case against. others who had maltreated him ten years previously. Although the court accepted that. abuse had occurred, it did not agree that depressive illness necessarily followed, and. denied justice to the. plaintiff.

BBC. h2g2 16/Sept/1999

The BBC's h2g2 website. is billed as "Earth Edition of The Hitchhiker's Guide to the Galaxy!". Naturally, one of its pages
is about me, me, me. It. starts off with the lines;

Every now and then. something comes along which makes you think "Ah! That's what the Internet is for!" Mike. Corley is one such. case.

The. page itself can be found at http://www.bbc.co.uk/dna/h2g2/alabaster/A164404

The user comments linked from h2g2. are less than respectful, but given the point of view my website promulgates that is understandable. It's true that without the communications ability afforded by the internet, which came along at. just the right time, my complaints would be getting nowhere. But that's a two edged sword also; miniature. cameras only appeared around 1990, so the advantage of technology is. up to the adopter. Secret service intrigues, and on the other side of the coin human. paranoia, have both been going on for centuries; what changes now is an increased technologisation of both sides.

their friends, and even with the property and the
honour of their friends. They are overwhelmed with business, with the study of languages, and with physical exercise; and they are made to understand that they cannot be happy unless their health, their honour, their fortune and that of their friends be in good condition, and that a single thing wanting will make them unhappy. Thus they are given cares and business which make them bustle about from break of day. It is, you will exclaim, a strange way to make them happy! What more could be done to make them miserable?--Indeed! what could be done? We should only have to relieve them from all these cares; for then they would see themselves: they would reflect on what they are, whence they came, whither they go, and thus we cannot employ and divert them too much. And this is why, after having given them so much business, we advise them, if they have some time for relaxation, to employ it in amusement, in play, and to be always fully occupied.

How hollow and full of ribaldry is the hea

use of their own reason much
more sensibly than in others. Oftentimes persons have (so far as could be judged) received the first saving conviction from reasoning which they have heard from the pulpit; and often in the course of reasoning they are led into in their own meditations.

The arguments are the same that they have heard hundreds of times; but the force of the arguments, and their conviction by them, is altogether new; they come with a new and before unexperienced power. Before, they heard it was so, and they allowed it to be so; but now they see it to be so indeed. Things now look exceeding plain to them, and they wonder they did not see them before.

They are so greatly taken with their new discovery, and things appear so plain and so rational to them, that they are often at first ready to think they can convince others; and are apt to engage in talk with every one they meet with, almost to this end; and when they are disappointed, are ready to wonder that their reasonings seem to make no more impression. Many fall under such a mistake as to be ready to doubt of their good estate, because there was so much use made of their own reason in the convictions they have received; they are afraid that they have no illumination above the natural force of their own faculties: and many make that an objection against the spirituality of their convictions, that it is so easy to see things as they now see them. They have often heard, that conversion is a work of mighty power, manifesting to the soul what neither man nor angel can give such a conviction of; but it seems to them that these things are so plain and easy, and rational, that any body can see them. If they are asked, why they never saw thus before, they say, it seems to them it was because they never thought of it. But very often these difficulties are soon removed by those of another nature; for when God withdraws, they find themselves as it were blind again, they for the present lose their realizing sense of

us and heaven or hell there is only life, which is the frailest thing in the world.

214. Injustice.--That presumption should be joined to meanness is extreme injustice.

215. To fear death without danger, and not in danger, for one must be a man.

216. Sudden death alone is feared; hence confessors stay with lords.

217. An heir finds the title-deeds of his house. Will he say, "Perhaps they are forged" and neglect to examine them?

218. Dungeon.--I approve of not examining the opinion of Copernicus; but this...! It concerns all our life to know whether the soul be mortal or immortal.

219. It is certain that the mortality or immortality of the soul must make an entire difference to morality. And yet philosophers have constructed their ethics independently of this: they discuss to pass an hour.

Plato, to incline to Christianity.

220. The fallacy of philosophers who have not discussed the immortality of the soul. The fallacy of their dilemma in Montaigne.

221. Atheists ought to say what is perfectly evident; now it is not perfectly evident that the soul is material.

222. Atheists.--What reason have they for saying that we cannot rise from the dead? What is more difficult, to be born or to rise again; that what has

never been should be, or that what has been should be again? Is it more difficult to come into exi

of thoughts born from the common
talk of life. As when we speak of the common error which exists among men that the moon is the cause of everything, we never fail to say that Salomon de Tultie says that, when we do not know the truth of a thing, it is of advantage that there should exist a common error, etc.; which is the thought above.

19. The last thing one settles in writing a book is what one should put in first.

20. Order.--Why should I undertake to divide my virtues into four rather than into six? Why should I rather establish virtue in four, in two, in one? Why into Abstine et sustine[1] rather than into "Follow Nature," or, "Conduct your private affairs without injustice," as Plato, or anything else? But there, you will say, everything is contained in one word. Yes, but it is useless without explanation, and when we come to explain it, as soon as we unfold this maxim which contains all the rest, they emerge in that first confusion which you desired to avoid. So, when they are all included

in one, they are hidden and useless, as in a chest, and never appear save in their natural confusion. Nature has established them all without including one in the other.

21. Nature has made all her truths independent of one another. Our art makes one dependent on the other. But this is not natural. Each keeps its own place.

22. Let no one say that I have said nothing new; the arrangement of the subject is new. When we play tennis, we both play with the same ball, but one of us places it better.

I had as soon it said that I used words employed before. And in the same way if the same thoughts in a different arrangement do not form a different discourse, no more do the same words in their different arrangement form different thoughts!

23. Words differently arranged have a different meaning, and meanings differently ar

I think the easiest would be to format a new disk on the PC, as mentioned elsewhere, and then use the Atari to copy the files to the new disk. I think you have to copy one file at a time because a full atari disk to disk copy will overwrite the bits required by the PC, and the PC won't read it after that.

However, as alternative I recall that you can read the disks on a PC by using linux.

You can get various very small distributions of linux (i.e. 3-4 diskettes only) that install and run "on top of" DOS/Windows using the existing dos file system. Unzip the linux distro into a directory, run linux-start.bat (or whatever it's called), and it boots into linux using your dos/windows file system. Now mount the atari diskette and copy the contents into a directory. Now reboot and you're back to dos/windows, and the atari files will be there on your hard disk where you put them.

In the past I have used "mini-linux", but that was long long ago. There are much more up to date distros of linux designed to be started from dos/windows. You would need to google for them yourself, I don't know what they are.

There is a simpler solution if you still have the Atari, and the diskettes are standard 80 tracks and 9 sectors/track: There is a PD program called DISKMOD.TOS (7187 bytes) that needs BLOCK0.DAT (512 bytes) in the same directory. If you put the old Atari disk in the drive (with write-protection off) and then run DISKMOD.TOS, it writes a new IBM-style boot sector (from BLOCK0.DAT) to the disk *without affecting anything else on the disk*. You can then run the disk on the PC.

I suggest for the first disk or two you make a back-up first on the Atari, but I have never known it to fail (although there may be problems with 'skewed' formats, but the older Ataris did not produce that).

If you have problems locating the programs, send me your email addrress and I'll forward them to you.

Regards, /Peter/

Hi everybody,

after I sold my 1040 STFM 16 years ago, today I bought a second hand
520 STE. Yeah!

Anybody know where I could get a users manual online? Thanks a lot.

Depending on what you want to know you could try the guides on my site
(plug plug), http://www.zhell.co.uk/atari.html

It's a basic user guide, which is kind of work in progress at mo..

Thomas

I do not believe there is one. There could be, but I would just buy one from
Best Electronics or some other Atari vendor. On the other hand, you may want
to check out the Atari ST emulators sites. I have seen some that have manuals.

Hi Thomas,

thank you very much for the link to your website. It's very good and
```

very well done. I'm sure I'll take some useful information from there.

Cheers,
David

Hi Edward,

thanks for the information. What I was looking for is the original
manual. Just for the shake of having it.

Cheers,
David

```
Did the STe even have a new manual for it, I seem to remember it might
just have been the old STFM one with an addendum on a separate couple of
sheets, but I could be wrong on that. I'll have a look next weekend, if
that's the case then I could scan the addendum for you. The manual if
it's just the STFM one comes up on e-bay all the time for a couple of
pounds, which would be cheaper than downloading it and printing off the
sheets I would imagine.
Thanks for the comments on the site btw :-)

regards

Thomas

Hi Thomas,

yes, I'm sure that the STE had a manual, because in eBay I have seen
some advertisements which contents a manual.

Thanks for the offer of scanning the STFM manual for me, but I would
not like to bother you with such a boring task :-) I'll keep an eye on
eBay to see if I can get that manual that you said.

Thanks a lot.

Cheers,
David

I have an Atari 1040 from circa 1986. I had a "shoe box" hard
disk that worked with a cable from the back of the ST. There
was a warning the manual that the cable should *not* exceed
9 inches long.

So is this *really* a limitation??? If I want to use a longer
cable, is that going to mess up the communications???

```

If it is the Atari SH204: yes, it'll mess up the communication.

I have heard that if you exceed the reccommended length, data
communication between the hard drive and the ST can get messed
up. Personally I would think it could go a little longer. There
is the same kind of warning for the IDE cable length for the
Falcon. I have an ID cable of 4 feet and it works fine.

There is one problem with that theory. The DIN cable on that device is a male one.....which is what a floppy drive has......but the pins on the other part of the device is for the cartridge port. So I wonder if its something that plugs into the floppy port and then plugs into the cartridge port of another ST? Just an idea. Could be for basic file transfer or networking.

Can you tell me where to get the cable and software from?
Been looking for a cable for sometime now and no luck.

Thanks.....

Try either Best Electronics or C&P Computers. They should have
it. Video64 may also have it.

I fell in love with the net and all the compuiter teahcnology in the very early years and have loved it ever since, I have an IT Degree and Communications degree and will be working on my doctorate for the next five years, in bwetween I design websites, databases, Multimedia Produxction or anything that wil make me a penny, just student scraping by. But Guess what? I don't want your money, your e-mail, or anything. Each of these sites has a specific topic but they have them style and layout sothey are easy to navigate and ther a search function should take you to exactly where youwant to, or just explore, they have outside service you can acccess as well. Each site has 10,000 plus articles and they are updated everyday so you know you are gettin up to date information. ENough, here the computer and tech related sites.

Friends!

I'm proud to announce the 2010 edition of the Nordic Atari Show (NAS)!
The event takes place June 11-13 in Falk=F6ping, Sweden (about an hour
from Gothenburg by train).

NAS is an annual get-together organized by the Swedish Atari Club
(SAK). It's a simple, improvised event; the idea is to hang out, eat
pizza, and fool around with our beloved Atari machines. The essence of
NAS is its visitors and what they choose to do with it.

Traditionally NAS is an Atari event, but other (retro) platforms are
welcome as well. However, if you're 14 years old and wish to play
Counter Strike with your friends, please go somewhere else

For more information, take a trip to: http://www.sak.nu/index.php?ucat=3D15=
&sta
... index=3Dtrue

Hi,

I am from germany sorry for my bad english.
I have got an old Atari Mega STE, it boots up to the GEM, but the mouse doesnt move and i no reactions on keystrokes ?
Any help will be great.
(I have put the keyboard in the hole named "keyboard" and the mouse in the hole named "mouse"), i have also tested to plug the mouse into the hole on the keyboard, nothing helps.
Thank you,
bye
Loddar

Are you sure you are using the right type of mouse and (if it's a dual Atari/Amiga one) it is switched to Atari?

Can you move the mouse cursor with the arrow keys while holding down <Alternate>? If so, you may have either a break in the mouse cable, or a poor connection on the mouse port. The soldering of the socket to the motherboard sometimes develops a dry joint to one or more pins, but a hot solder iron on the connections fixes that.

But I notice now that the keyboard doesn't work either. In that case it may be that the plug from the keyboard to the main PCB has come loose, or makes a bad connection. Open the housing and look - unplug the keyboard connection and replace it, making sure you are on the right pin positions!

And again in German:

Bist Du sicher dass Du den richtigen Maustyp benuetzt und (wenn dies eine Atari/Amiga Maus ist) der Schalter richtig auf Atari gesetzt ist?

Kannst Du den Mauscursor mit den Pfeiltasten bewegen wenn Du gleichzeitig die <Alternate> Taste gedrueckt hast? Wenn ja, dann kannst Du vielleicht einen Bruch im Mauskabel haben, oder einen schlechten Anschluss an der Maussteckerdose. Das Loeten der Dosenanschluesse zur Tastatur-Hauptplatine hat manchmal schwache Loetstellen zu einem oder mehreren Stiften, aber ein heisser Loetkolben kann dies leicht reparieren.

Aber ich merke gerade dass die Tastatur auch nicht arbeitet. In dem Fall kann es sein dass der Stecker von der Tastatur zur Hauptplatine sich geloest hat, oder der Kontakt schlecht ist. Oeffne das Gehaeuse und siehe nach - ziehe den Stecker und steck ihn wieder zurueck (achte auf die richtige Stiftposition!

Regards, /Peter/

Its an original Atari-Mouse. Not working.
But the keyboard works, thank you for the tip with the alternate-key.
Greetings,
Lothar

You want to check to see if any pins are bent. That happened to me one
time. Also, try another Atari mouse. They do not last forever.

That sounds like the Mouse/Joystick sockets have worked loose from the
keyboard PCB. Very common and easily fixed. Probably worth removing them
totally and using epoxy to fix them in place...

```

George Gollin is a University of Illinois science teacher who claims to be an =93expert=94 in accreditation=97despite having no formal education or training on the topic.

=93These sons of bitches who smell money are just using the situation there for their own ends,=94 says George Gollin. =93They=92re monsters. They=92re just disgusting monsters.=94

Who is George Gollin talking about? Perhaps it=92s the pedophile-pandering gay pornographer who ran the website where George Gollin made 1,280 posts? No, not a word about that from George Gollin.

Maybe it=92s that woman who sold 386 mutant lab pigs to the public for food, and got cited by the FDA for violating federal health laws? That was no woman, that was his wife, Melanie Loots, and no comment on that from George Gollin either.

Or could it perhaps have been that gay Oregon bureaucrat who was adjudged by a US federal court to be an anti-Christian bigot and civil rights violator? Nope, that was George Gollin=92s =93collaborator=94 Alan Contreras, to whom George Gollin sent all the slanderous web pages his employer ordered him to remove from their server.

No, George Gollin is talking about people like Dr. Jerroll Dolphin.

All Dr. Jerroll Dolphin wanted was to bring doctors and medical care to the poor, sick and dying of Liberia, an African country in the throes of violent chaos and civil war. Against all odds he nearly succeeded, opening St. Luke School of Medicine, obtaining government accreditation, and even graduating medical doctors who achieved an excellent 88% pass rate on national medical board exams.

Thanks to Dr. Dolphin=92s efforts, for the first time in ten years doctors brought medicine to hundreds suffering in refugee camps. Twenty-five new doctors were licensed, many of whom paid nothing at all in tuition for their education.

But then the rebels controlling the education system in Liberia began demanding a $6,000 a month bribe from Dr. Dolphin and St. Luke. When the school refused to pay George Gollin went into action, court documents allege.

Acting as a =93consultant=94 to the corrupt Liberian regime, court documents allege that George Gollin began a campaign to slander St. Luke as an illegal =93diploma mill=94 operation.

As a result of George Gollin=92s alleged treachery, St. Luke School of Medicine could not provide the doctors and medical care that the African people so desperately needed. And without such care, untold numbers of African men, women and children suffered needlessly and died cruelly.

Now Dr. Dolphin and St. Luke School of Medicine are suing George Gollin and the University of Illinois in a California federal court.

Dolphin already has obtained a $120 million judgment against some of the defendants in an African court.

But who is really the =93monster=94 using the Liberian situation for his own ends? The answer is written in the blood of dead African babies.

```

Atari SF314 stores 720K bytes. The drive provides the formatted 80
tracks time 18 sectors time 512 bytes. 9 sectors per side ?

SF354 - 360K bytes, 80 tracks, 9 sectors , 512 bytes in each sector.

Is that correct ???

I believe that those are the default formats, but normally we don't use the
the Atari numbers, just "Single Sided" and "Double Sided". Many of the
Pirate Disks were extended with 81 or 82 tracks....

Hello!

BITS have created their
first demostration only for
high resolution, monochrome:

BITS0058 "Coffee".

With lots of sines and
waves effects,
giant scroll line,
beautiful icons,
YM-2149 music.

100% 68000 assembler.

Download:
http://thebitsclub.tripod.com/demo/BITS0058-ST-20110104.ZIP

Good Night,
by BITS
(thebitsclub.tripod.com)

Hi there,

I was looking for the software titles "Toki LineTest" and "Toki Professional" for the Atari ST and Falcon computers. These are animation pencil test software packages. Geocities hosted the main website where these titles could be downloaded. The website is archived on Oocities, but the software cannot be downloaded off of it anymore. I was wanting to test this software on my Atari computer and hope to get a Falcon soon. Any help in find the software is greatly appreciated. Thanks.

Hi Atarians,

This should not be a usual commercial. I want you to know that we (Frederick Mei=DFner, the hoster of the Profibuch and myself) have set up a Jabber server for the Atari scene.

To be understood, right now, there is no native jabber client for Atari!

For those running MiNT, MCabber (http://mcabber.com/, the successor of well known cabber) might be pretty straightforward. Its a console client using ncurses, like rhapsody IRC or pico editor. Another workaround to connect to Jabber with your Atari, called BitlBee (http://www.bitlbee.org). This is a software that acts as gateway between IRC and Jabber (and other IM protocols). You connect via aIRC to it, and have a room with your online buddys in.

We also have talked to Joakim to implement the XMPP protokol to aICQ. Another port could be Psi as a desktop client (http://psi-im.org). Understatement, it will be a big task)

If you want a Jabber Domain with "Atari" in it, join us at http://www.atari-jabber.org

bye
Bernd

Yes, there is on the UK market e.g., but it's darn expensive (as it also includes a DVD player):

<http://www.meos.co.uk/product/index/en/DVDM133B>

Please, what is the structure of a .ST file emulating an Atari ST
floppy disk?
The file has 738.260 B versus 726.016 on the FD.
Thanks
Paul

Hello,
I'm writing midi replay for Atari ST (and compatible) and I've stuck
with setting proper tempo handling. Anyone has managed to translate
midi delta times to proper mfp freqency?
I wrote midi 0,1,2 parser and put all the data in custom structure.
And I track midi ticks for each midi track (in timer b interrupt) and

send events at proper delta relative to previous events (I write directly to midi port without bios and put all the events collected from all tracks in buffer to send all the data at once), but I don't know if it is good enough. My tempo calculation is wrong, the files are replayed too slowly.

To calculate tempo I get PPQN from midi file, quaternote duration (500 000 by default and I am handling set tempo event) and use this (for sure there is something wrong with it):

```
 float freq=quaternote duration/1000000.0f;
 freq=freq/PPQN

 //calculate freq in [hz]
 freq=1.0f/freq;
```

After that I pass freq to function which translates frequency to MFP data and mode (it's ok for sure).
Any thoughts on this topic? Is there other way for replaying midi files?

Regards,
Pawel Goralski

Both work but the SC1224 has some darkening at the top and a few
vertical lines at the top. The monochrome monitor has a good picture
but some noise when the volume button is being adjusted. However it
works fine when the volume is set. If anybody wants to pick em up or
meet in the greater LA area.

My wife hates them being around so I got an Ambery RGB box and a Best
electronics monitor cable to make my Mega work with an LCD display.

Also if you have any opinions if I should just recycle them.

I'm selling my back 1040 STF on Ebay right now also.

http://www.ebay.com/itm/Atari-1040-STF-/111000534333?

Hi all

I've posted this question in atari age forums and emailed lotherik and I still don't have an answer.

My mega ste doesn't have an internal drive or the.mount or scsi adapter inside. If I get an ultrasatan and fit it internally, will I still be able to use the Dma for my link?

Would be nice so I can use US as a hard drive and still access cd drives.

Steve

Very hard to find, they sometimes appear on ebay, also bundled with an
ST (worth buying the ST just for the Link!!)

Alot seem to come up in germany so when doing an ebay search do a
worlwide one.

You can get a larger 40 pin socket and cut off the unwanted pins.
Another trick I will be using;-)

Sorry, I missed the thread.

But...I recently had the same problem and let Alex at ATY Computers do the job for me - he desoldered the old chip, soldered in a new socket, etc. I bought the clock chip itself from Brad at Best Electronics. If/when it goes down again, I can easily replace it myself now.

I'd have to look it up, but (aside from S&H), I believe the cost was in the $40-50 range.

Just an option for people like me who can't solder without thermonuclear meltdowns occuring... :)

Yes, your right, I was thinking of the NOVA card adapter.
The Mighty does have the pins on top, and some of the lines must be
brought through to the top pins. Those can be found with an Ohm meter.
Thanks for pointing that out, and sorry for the mistake. It made me go
pull the Mighty out of a cabinet :)

Remember having stability issues with a Nemesis installed, and
replaced the 04 with a socket on the Mighty and tried many "04's".
Right now there is a TI SN7404N installed in the socket. AIRC, the HCT
did not work well. The best speed I could get was 20/40 and still have
DMA working. 24/24 would work, but not 24/48, crash every time.

Pretty sure I used the same clock patch Peter Green recommended, which
I think is also the one Doug Little included in the Afterburner Cook
Book. I think the Nemesis used a cap tied to ground off the DMA clock
in, that didn't work. Looking back at my notes, it looks like I only
ran a clock wire from the buffer mod to the inductor at the DMA clock
in with no cap or resistor.

I have uninstalled the Mighty, and cleaned the Falcon back into
standard configuration so I can start installing a CT060 in the
future. Wish I had kept better notes.

Also see a line I included that runs from a pin on the larger header
to a pin on the GAL closest the processor for some reason. I have a
half assed schematic I drew up, at least of all the traces I could
follow, and would have to look back on those notes to see why it is
there.

Ouch! At least nothing was lost, apart from your time :-/

The NVRAM chip that I witnessed being replaced would have lent itself very well to this approach. Its replacement was sourced as a free sample from Maxim, I can't recall the actual number any more.

I would probably suggest desoldering the entire chip rather than bodging by cutting through/soldering to the original chip's pins. The risk of metal swarf...

I'd be quite happy about the soldering bit, it's all the work that's involved to get to the bottom of the motherboard that would put me off (especially with expansion bits attached!) :-)

I bought a tower'ed Falcon with MightySonic. I've added a Nemesis I had spare. 40/20 seems fine.

I've managed to get it working 50/25Mhz, but not perfect.

Trying to use Falcamp works for about 1 or 2 seconds then crashes.

Also, I can't run FARA at this speed (fast ram enabling program) as
it'll lock up straight away.

I might see if using the SDMA only works (playing something like a avr
file etc), it could be a problem communicating with DSP. I could also
play with different fast ram, perhaps that'll help but I have a
feeling the logic chips on the MS aren't up to the speed.

I did some alterations on the MS, I used the standard 7404 one I think
as it worked better for me. The one that came with it.

>From what I remember is that one of the gates on the 7404 on the MS
inverts the expansion bus clock line. What I did was bridge this, so
it wasn't in the clock path and used an inverted clock from the
Falcons clock patch on the motherboard to drive the expansion bus.
Make sense?!

Yes, jumping the clock signal over the inverter makes sense, and maybe
shifting ~2 or 3ns helped out. I don't have any kind of equipment to
really get too far into it aside from hacking :) Think at one time I
tried clocking the board right off the Nemesis.

The simms I have are 60ns, and the 030 is 50mhz. Best speed I got was
42, but suffered DMA troubles on the SCSI bus. 40 was pretty much
rock solid. Thought the same as you, and purchased some faster PALs
and MACH chip, but never found anyone to copy and burn the set for
me.

I recently purchased a bunch of 030 and 040 Mac accelerators and
variable oscillators, just to have them I guess. Never know when a
broken bone is going to lay one up for a while :)

Hi Mike,

I was wondering, does it need FPM memory or can it take EDO? I guess it's FPM only, as 30 pin simms didn't come in EDO format (or did they?!). I was thinking about hardwiring a 72 pin simm onto it, probably need to make sure I get FPM.

I think I might have tried wiring the clock straight from the Nemesis, it may still be like that, I've forgotten now. Maybe if I find time over Summer I might try delaying the VIDEL/COMBEL or SDMA to see if I can get 50MHz working, but I have a feeling the FastRAM will never work at this speed.

Hi Lyndon,

I'm pretty ignorant about memory types, I do remember that 8 or 9 bit simms would work. Performance never changed swapping between 100ns and 60ns simm modules, AIRC.

My Mighty would work with the bus/cpu clocked at 24mhz. Never tried to skew the clock on that card to figure out where the misfire is. Since the bus would run at 24 ok, I'm assuming there are timing issues with the Mighty at 50, be it the fast ram, PGAs on the card, or bus interface. Think I remember reading some MOT specs, and deciding that the ones on the Mighty were not intended to run over 20mhz, but we know how that goes :) Like I said earlier, I purchased the faster chips, but never did anything with them. I keep a watch out for old stock or discarded EPROM burners and bus analyzers specific to the 030 and 040 with retirement in mind :)

I played with the Afterburner much more in that respect. They seem to function pretty much identical when it came to playing around with clock speeds. On the AB, I tried both 88915 and 88916 low skew clock distribution without better results. One provides a delayed BCLK for the 060 to use, as far as I got installing an 060 on the AB was the Falcon would boot off a diagnostic cartridge, but would crash right when TOS started to load. I don't do software (that i'd talk about), and know there is code in the first couple of lines that will crash the 060 unless modified. Messing around with the Milan and schematics Uwe provided, found there is also a state the 060 must be in on RST, and I didn't include that logic, which is likely more of the problem than TOS. Once I get the 060 adapter working on the Milan, I'd bet dollars (Euros?) to doughnuts that the AB could also be made to work with the 060. At one time Petr Selik (sp?) was going to send a modified 060 friendly version I could burn into a EPROM, but that was years ago, and never got a copy.

Cool, it just started hailing outside :)

So I'm thinking that the EDO memory alone wouldn't allow the Mighty to work at 50mhz, as that is what is used on the AB, without some form of bus timing logic. I have a couple of Apple 50mhz 040 cards that do not have 32 bit memory, all distribute the clocks with the 88916 low skew driver, and have a PAL on the board which I'd bet has something to do with bus logic. Even then, the 50mhz cards on the Quadras were always a bit flakey. The Quadras with a 25mhz bus worked well, but the speeders for the 33mhz bus Apples were always plug and pray.

Rodolphe Czuba is the guru when it comes to this stuff on most all Atari hardware. From what I can tell, he is able to get the high cpu speeds because of the programmable chips on the CT cards, and assume he takes care of bus timing, among other things that way with the different loads. I'd also bet that some of the timing issues can only be handled by inserting wait states, something we cannot do just hacking on the card.

Rodolphe said he was willing to look at some of my projects, but seemed leery about the time involved. He really isn't that expensive, and considering he could solve issues I've been messing around with for years in a day or so, I think that is the way to go. One has to remember, he also has a "real" job, and must pay bills and equipment cost, so it wouldn't be something I'd expect him to jump into, or do it for free.

I'm not into emulation, so if he ever gets a wild hair to build a dual 100 mhz 060 with twin DSPs, and the software to off load the system processes between them all, I'd be first in line :)

I'll bet all the hardware gurus get a good laugh reading all this hacking nonsense :)

Mike

Try Diamond Edge, or ICD Pro tool (PRO version works with any
adapter).

Have fixed my garbled directories before.

In case anyone was staying awake nights wondering what had happened, my chip replacement surgery was a success.

Three of the pins stubbornly refused to give up their solder, so I used a chip puller to apply pressure to the side of the chip that had one remaining pin while heating the pin. This allowed me to pull one side of the chip. Then I heated the other two pins back and forth while continuing to tug on the chip until it gave way. I used some desoldering braid to remove the remaining solder so that the IC socket could be installed.

As someone else mentioned, a 40 pin socket can be shortened for use as a 24 pin socket. This works well with the sockets that have a plastic bridge across the middle; fortunately my nearby Radio Shack had one of these left.

I also used a brush and dust blaster to carefully remove all of the desoldering debris after I was done. There were several small bits that wandered down the circuit board as I was working.

After I had replaced the clock chip and powered up the first time, I thought something was b0rk3d because at the end of the boot process I had a small dialog pop up that said "AES Error" and had a single button labeled "Abort". Clicking this button just made the dialog reappear. But after I hit the reset button once, booting continued successfully to full completion.

I was able to set the date and time and save them, and saw the time moving forwards at the customary rate. I shut the power off for twenty minutes, powered up, and had the thrill of seeing that correct time was displayed. Hooray!

The only problem I have now is that whenever I tell someone about this achievement, they say "My G*d! You're still messing with one of those things? Don't you have anything better to do with your time?!" ;)

Does anyone know if there is a software solution to enable the STe using TOS2.06 to display drive labels beyond the letter P limit? I know that Extendos allows this for a CD drive.

TIA

For hard disk partitions this is possible with MiNT, MagiC or Big-DOS.

It's been a while since manually installing MiNT on my Afterburner, so please bear with my ignorance :) Currently I don't have either machine up and going, but soon.

I have two projects that I would like to installed as much of the MiNT distribution libraries needed for networking and compiling ported source code for each specific machine.

The networking installation on my Afterburner is setup to use a SCSI Ether net adapter purchased from Anodyne and worked well with my Linksys router and cable modem. That machine only had a basic MiNT install, with NAES, NVDI, ect. I don't recall having much trouble getting it up and going, but now I would like to do the same on a CT060 Falcon and Milan.

I don't think I need the latest and greatest configuration, I don't do much if any actual coding, but do occasionally uses bits and pieces of source to play around with, and would like to be able to compile them. Of course I'd like to be able to compile many of the open source that have been ported over to my specific machines too.

Think once the CT060 is installed, setting up the rest MiNT will be much like the Afterburner. Think I read on one of the MiNT sites that there was now an installer that is utilized, and one must only download all the necessary archives. I'd appreciate any tips on setting up the CT060 with things like auto folder order and such too.

The Milan has an "OS" installation disk with a modified VDI and NAES. I'd like to utilize an ET4000 card, and have the version of NVDI that is suppose to support that chip set. I've only used NOVA drivers in the past, but thought I understood the latest version of NVDI will work as the VDI for the ET4000. The Milan wouldn't initialize the ET4000 in VGA mode, makes it a bit difficult to trouble shoot. Also on the Milan, I'm not sure if all is required is MiNT net drivers for a specific card, or if there are high lever drivers also needed as for the SCSI bios and sound card.

Tips, advice, answers to questions I didn't ask, or links would be appreciated :)
Thanks,
Mike

Download a complete EasyMiNT distribution and install it on a clean
machine. Then add what you need to get graphics, sound etc. working.
Avoid old stuff or stuff which isn't compible with memory protection,
since memory protection is extremely valuable when learning to code C
(it usually prevents the machine from hanging completely when your
program did something bad).

>From your description, I was in the same position a few years ago, I
wanted to taste the open source unix candy and port stuff. I also
wanted to learn C, since I only knew GFA & assembler. A full blown
freemint/XaAES really opens up the sky. Suddently it's a "real"
computer again. Go for it.

Hi;

I am trying to substitute a 540 MB SCSI hard disk (IBM DSAS-3540) on my MegaST with a 2.1 GB one (IBM DORS-21360), so far with confusing results:

The disk is connected to the ACSI port of the Mega through a Ge-Soft adapter (unknown model, the one on a 10x6cm PCB containing, beside the main chip in a PLCC package, the parity chip and a couple of bus drivers, and two ACSI ports).

The ICD (V6.5.5) driver and the partitioning utility that has worked well with the smaller disk refuse to work with the larger one.

CBHD driver seems to work (almost) fine, except that its partitioning utility insists on making cluster sizes on the 2.1 GB disk twice as large as they need be (e.g. 2KB cluster on a 30MB partition), and that the Mint version that came with the only 68k version of XaAES now fail to work with any AES. I found that this version of Mint does not work with CBHD driver even on the smaller disk, which can probably be attributed to this buggy (pre)release of Mint but that knowledge do not help me much.

The SCSItools partitioning utility that comes with the Hushy driver (V6.14) warns that only the first 1GB of the hard disk will be recognized and fails to recognize partitions created with CBHDCONF partitioning utility, so that it won't install the driver. However, the Hushy driver itself, if manually put instead of CBHD.SYS, seems to work on the full 2.1GB disk size without any problems (the problematic Mint version works too).

The demo (V8.2) of HDDRUTIL warns of a 1GB disk limit on ACSI port and fails to recognize disk size (on a disk partitioned with CBHDCONF it reports 1GB disk size and some negative free space). The driver itself recognizes only those partitions created by CBHDCONF that fit inside the first 1 GB of the disk. Interestingly, an older version of HDDRUTIL (V7.5) correctly recognizes 2.1GB disk size but -only- if SCSIDRV.PRG had been previously activated. Ticking on the SCSI driver option for HDDriver does not help, and neither does ticking the ICD-compatible option. As I can not actually partition the disk with the demos of HDDriver I do not know how that would fare.

So, what would be a sensible course of action? It seems that currently I do not have a complete single-source solution (i.e. for usable results I have to combine CBHDCONF and HUSHI.SYS). I was thinking of getting the HDDriver (it takes significantly less memory then either CBHD or Hushy) and was surprised that its demos do not work correctly here.

It would almost be easierfor me if simply any driver refused to work because of a "1GB disk limit without ICD-compatible adapter" but CBHD and Hushy confuse the matter by actually working- or so they seem to be; I do not know how reliable any of them would be, concerning the circumstances.

Thanx in advance for any comment.

I think you need a full copy ofd HDDriver 7.I do have a registered copy of HDDriver 8, which does not work very well on a Stacy or a MegaSte, although Hddriver 7 works OK. The Mega STe has a 4 gig drive in it. Either version is a very nice program. Talk to Uwe about this, and I think you will succeed.

Jim

: The ICD (V6.5.5) driver and the partitioning utility that has worked well
: with the smaller disk refuse to work with the larger one.
:
: CBHD driver seems to work (almost) fine, except that its partitioning
: utility insists on making cluster sizes on the 2.1 GB disk twice as large
: as they need be (e.g. 2KB cluster on a 30MB partition), and that the Mint
: version that came with the only 68k version of XaAES now fail to work with
: any AES. I found that this version of Mint does not work with CBHD driver
: even on the smaller disk, which can probably be attributed to this buggy
: (pre)release of Mint but that knowledge do not help me much.

: The SCSItools partitioning utility that comes with the Hushy driver (V6.14)
: warns that only the first 1GB of the hard disk will be recognized and fails
: to recognize partitions created with CBHDCONF partitioning utility, so that
: it won't install the driver. However, the Hushy driver itself, if manually
: put instead of CBHD.SYS, seems to work on the full 2.1GB disk size without
: any problems (the problematic Mint version works too).

: The demo (V8.2) of HDDRUTIL warns of a 1GB disk limit on ACSI port and fails
: to recognize disk size (on a disk partitioned with CBHDCONF it reports 1GB
: disk size and some negative free space). The driver itself recognizes only
: those partitions created by CBHDCONF that fit inside the first 1 GB of the
: disk. Interestingly, an older version of HDDRUTIL (V7.5) correctly
: recognizes 2.1GB disk size but -only- if SCSIDRV.PRG had been previously
: activated. Ticking on the SCSI driver option for HDDriver does not help,
: and neither does ticking the ICD-compatible option. As I can not actually
: partition the disk with the demos of HDDriver I do not know how that would
: fare.

: So, what would be a sensible course of action? It seems that currently I do
: not have a complete single-source solution (i.e. for usable results I have
: to combine CBHDCONF and HUSHI.SYS). I was thinking of getting the HDDriver

: (it takes significantly less memory then either CBHD or Hushy) and was
: surprised that its demos do not work correctly here.

: It would almost be easierfor me if simply any driver refused to work because
: of a "1GB disk limit without ICD-compatible adapter" but CBHD and Hushy
: confuse the matter by actually working- or so they seem to be; I do not know
: how reliable any of them would be, concerning the circumstances.

: Thanx in advance for any comment.

I disagree. I have a mega STE with a 2 gig internal drive, using the atari scsi board, you can only format to 1 gig. But I am fine with this because I have a external 4 Gig drive, and 2 DVD roms, and a CD burner hooked up to it. I am using HDDriver 8

That seems a ridiculous price. These should really be called EtherNeC (C for
cart port) , there are also EtherNeA that go on the ASCI port. Do folks
really need these cards. I think I have one or two "spare" but they are in
the UK, and shipping to the US, especially if you wanted the RTL Ethernet
cards as well might be expensive. If you have "real" SCSI adpators in place
I would have thought the Anodyne/Falleron SCSI MAC boxes were better value.

In general, in order to use the fully capacity of drives with more than 1 GB of capacity connected to the ACSI port you need an ICD Link or a Link96/97 host adapter. The STE's adapter can only access the first GByte of a drive.
Also note that some SCSI drives (e.g. some Quantum and IBM drives) require the computer to have a SCSI of its own, which is only provided by the Link96/97, but not by the ICD Link.

By the way, you can actually format a SCSI drive of more than 1 GByte, but when partitioning only the first GByte can be accessed. (Formatting a drive only makes sense if there are bad sectors, otherwise partitioning is sufficient.)

Uwe, can you please comment on the behviour of HDDRIVER in relation to my Ge-Soft host adapter (NOT the MegaSTE built-in adapter), for which I do not have any documentation- as CBHD and Hushy drivers seem to work on full 2.1GB, do I have an ICD compatible adapter or not? And why does the HDRUTIL of V7.5 recognize full disk size only if SCSIDRV had been previously activated, and HDRUTIL of V8.2 not even then, and neither does the HDDRIVER itself?

thanx;

As far as I know the GE adapter is not compatible to the ICD or Link96/97 adapters, which means that it does not support more than 1 GB with ACSI drives. Other users of this adapter, which is not widely used, should be able to comment on this.
Have you checked whether HuSHI and CBHD are actually able to correctly write more than 1 GB of data to the drive?

Hi Everyone.

I've moved the Falcon motherboard to a nice big tower case.

Everything is working fine but...I need some help on the Falcon motherboard.

Would someone be so kind as to write a step-by-step document on how to lead out all its connector, or point me to someone who could make the necessary cables and connectors?

I would most definitely be will to pay for the cables and connectors as my time is at a premium these days.

Thanks!

As far as I can tell, it works correctly. I have partitioned the disk
using the CBHD utility into 14 partitions ranging in size from 32MB to
256MB, copied the data from the old, smaller, disk (each partition is
now filled about 20-40%), and have been using it for some days now
with manually installed Hushy driver (interestingly, although Hushy
partitioning program does not recognize CBHD-created partitions, it
notes the presence of an installed driver and lets me configure it).
Files from any partition appear to be ok, and applications start
corectly. Check of the FAT and directory structures report no errors.

Apart from the disk drivers suites, none of which works completely to my satisfaction in this case, the only items that I have found to fail are PC-Ditto, which does not recognize the existence of disk at all (not that PC-ditto is of any real use), and the partitioning function of Diamond Edge 2.04 which reports that it can not read sector 0 of the disk; testing, defragmenting, etc. in Diamond Edge works correctly, though.

regards;

You must have missed something, because one cannot configure CBHD with
HuSHI.
Anyway, if HuSHI can use the full drive capacity the host adapter must
be compatible with the ICD adapter.

Sorry, I did not express myself clearly. What I did was to partition the disk using CBHDCONF and install CBHD driver. It worked, but I experienced some problems with Mint (see below). Then I tried SCSITOOLS from the Hushi suite. It warned that it would ignore disk size above 1GB, did not want to display partitions created by CBHDCONF, and did not want to install Hushi driver, saying that there are no convenient partitions to do so. Then I copied HUSHI.SYS to C partition and edited the boot sector, substituting CBHD with HUSHI, and adjusting the checksum so that the partition would remain bootable. After restarting the machine, Hushi driver worked fine, and SCSITOOLS recognized its presence and let me configure it to my liking.

>Anyway, if HuSHI can use the full drive capacity the host adapter must
>be compatible with the ICD adapter.

I suppose so, but why then doesn't HDDRIVER recognize that? Maybe this adapter is somehow 'incompletely' compatible with ICD? Anyway, I think I will stay with Hushi for the time being- it simply works. I needed to change from CBHD to Hushi because, for some reason, the last ST-compatible version of Mint + XaAES crashes on startup with CBHD, but works fine with Hushi (do not know why, as far as I can tell both drivers are configured similarily).

regards;

I have no idea, but maybe others who have the same adapter can comment
on it.

hi all, i have recently decided that gfa was not a suffienct language
to program with and have since then made a change to pascal...good
grief what a tangled mess!!!!!!! , but........
if any one is willing ,who reads this,and  can offer advice in any
way
shape or form .... towards a practical approch to pascal programming
on the atari , i will gladly accept...

a little reference and guidence needed

thanks
charles

Does anyone know the video connections to connect a Mega ST4 to Phillips CM8533
RGB Monitor.

The CM8533 has a SCART and 8 pin D RGB connector on the back of the monitor.

I can solder the cable my self, if I know what the connections on the CM8533 are.

Derek

Yes,you can do it by yourself. I don't know the onitor but the scart connector
should be perfect.

bye
Bernd.

I bought the same chips you're asking for from Best electronics.
Check out their website: http://www.best-electronics-ca.com/
There's also contact information there.

After upgrading my Mega STe with those chips I've been able to use HD floppy disks using a standard HD disk drive for PCs.

```

I would like to add Ethernet capabilities to my Mega STe, but since I'll be using the ACSI port for a Link 97 with the ability to connect several devices to it and the cartridge port with several devices as well the current solutions won't work for me.

That's why I've been looking at the Ethernea adapter for use with an NE2000 compatible ISA networking card. Since I won't be needing the built-in MegaSTe SCSI/ACSI adapter I was thinking that I could use it for networking instead.

There's also an "Ethernet adapter II", but I don't know much about it. Unfortunately neither Elmar Hilgart nor Thomas Redelberger will reply my email messages where I'm asking for more information, and the PCB layout/schematics aren't readily available.

Here are the sites I've found:

http://home.arcor.de/thomas.redelberger/prj/atari/etherne/index.htm

(EtherNEA/EtherNEC adapters)
http://www.asamnet.de/~hilgarte/ (EtherNEA and Ethernet adapter II)

... hmmm.. come to think of it, those adapters are made for the *ACSI* port, not the *SCSI* port which apparently is what the built-in MegaSTE hard drive interface delivers (since I have a standard SCSI hard drive connected to it), but still, isn't the port which the internal hard drive interface ACSI?

Oh, by the way...
if you have a GAL programmer (or know someone who has) you can apparently program our own by downloading the data from here:
http://www.czuba-tech.com/old/museum.htm

(scroll down almost to the bottom of the page where it says "GAL files for ST (MSTE FPU, Mode2.6, Mode HD)")

I haven't tried it myself as I bought the pre-programmed GAL (PAL?)

chips from Best electronics, but it might prove to be a solution if
they don't have them.
That only leaves the AJAX chip.

Hello peoples,

Your knowledge please. I have just received a German Issue Mega ST 2.
It
appears to have some mods. Some kind of small IC in a tiny board
soldered
directed on top of the CPU. Plus a largish square board piggy backing
the
expansion socket. Its marked "Hyper Speed" on the first part and has
another
part that appears to have a 286 chip on it? Chip branded as "Harris".
So is
this getup just some kind of IBM compatiable hardware or is it a
floating
point gadget as well? There are two leeds also connected to two pins of
the
CPU.
So next question is there some kind of english software that I could
use to
take avantage of the extra gadgetry? Also is it hard to change roms
(can I use standard 520ST roms?) so that my desktop is in english and
not german? Thanks for your help guys. :-)

John Whitfield
NEW ZEALAND

PS has german keyboard with "Z" and "Y" swapped around from usual places

A 74LS74? That would be the "blitter fix", that came pre-installed by Atari
to fix some timing problem with certain series of blitter chips.

Could be a 2nd generation PC-Speed - that was an addon that enabled you to
run PC software. You need the driver disk that starts up PC mode - from then
on, you should be able to run old DOS software.

I had a "PC Speed" in my 1040ST many years ago, but removed it when it
became unattractive because the speed was way too low compared with
then-current PC clones, and compatibility was not prefect either.

cu

Hello,
I'm currently selling my CT2 Falcon, keyboard, trackball, FDI, FA-8,
CAF on german ebay. I will also do international shipping if requested.
If you're interested search ebay for items of user "kahadeh". If you
have any questions, email me.

Best regards,
Karsten

Is Lyndon Amsdon still around here these days?
I'm trying to get in touch with him using the email address on his
website (http://hardware.atari.org/), but I'm getting no replies. He
may not have gotten around to it yet, but thought I'd ask here in case
the website and email address is inactive.

You mean you've seen several VME graphic cards made *specifically* for
the Mega STe, or VME graphic cards in general?
Would the following VME graphic card for instance work with a Mega STe:
http://cgi.ebay.com/GSI-GRAPHIC-STRATEGIES-VMEBUS-VME-CARD-VIDEO_W0QQitemZ250074337674QQihZ015QQcategoryZ58272QQrdZ1QQcmdZViewItem

If not, is the limitation with the software (i.e. no drivers have been
made for this card for use with the Mega STe), or are there several VME
standards, whereas only one kind works with the Mega STe?

I'd love to get better graphics from my Mega STe as well!

You don't need to look around for an old, second-hand floppy when a
new, off-the-shelf drive will work fine! I've been using a Sony floppy
drive with a Mega STe and it works great. With the new GAL (PAL?) chip
replacement that I ordered from Best electronics
(http://www.best-electronics-ca.com/custom-i.htm) I even have

high-density (1.44 MB) support!). Oh, and I already had the "AJAX" disk controller chip which is guaranteed to handle 1.44 drives as opposed to the stock WD-1772 which isn't (though many people still use them for that purpose, some reporting good resulting, some bad). My Mega STe was an old model, so it didn't come with the AJAX, which I then bought later.

I think those were the two things I had to change in my Mega STe to make it accept a high-density floppy drive.

I can't remember all the details off-hand at the moment, but for the drive itself I believe all I did was use a standard "PC" type Sony floppy drive, then modify it so that it became "drive 0" (instead of "drive 1" as PCs use) and short the disk-detect switch. I think I also needed to turn the flat-cable connector around 180 degrees.

If you know how to handle a soldering iron, and can find the "drive 0/1" jumper (different versions of the Sony drives have different locations for this jumper -some drives don't even have a jumper, but a solder-pad that you have to cut or unsolder -It's been a while, I can't remember the details) it's really not that complicated.

I think I even made a "how to" instruction which I uploaded somewhere if you're interested.

Hallvard

No.

> If not, is the limitation with the software (i.e. no drivers have been

A bit of both. That card will not fit into the case. The probably won't
map logically in ST address space. Also, you need drivers.

> I'd love to get better graphics from my Mega STe as well!

What you need is NovaVME, Crazy Dots or Matrix (or whatever it's
called).

The physical aspect is no problem as I'm recasing my Mega STe anyway,
but that doesn't solve those other problems.
Funny they call it VME when it's obviously not standard-VME. I thought
the idea of incorporating such a standard was the ability to use a
variety of 3rd party cards as opposed to a few "Atari only" cards.

Unless someone can design Atari drivers for these cards....

> > I'd love to get better graphics from my Mega STe as well!

Yup, I know. I also know they're almost impossible to get hold of and
when they are found they cost a small fortune.
Looks like I'll just stick with my 640x400 mono output.

That's a dual VME card. The Mega STE and TT030 can only handle single
VME.
But it's also driver support. Like pep said.. only the Nova VME,
CrazyDots I and II and the Matrix cards. (not matrox, those are a
different company)

The VME standard defines multiple card formats - the STE/TT has a slot for a 3U VME card, while the one on ebay looks like 6U:

http://www.interfacebus.com/Design_VME_Card_size.html

Furthermore, there are different bus width cards, with 16/32 data lines and 24/32 address lines. All these VME cards are downward compatible, however, Atari only implemented the smallest format, so bigger cards won't work. And the STE/TT does not support DMA/Busmastering on VME cards, either.

Anyone here using "Eagle" (http://www.cadsoftusa.com/) to design electronic circuits with? Or to be more specific and on-topic; used it to create Atari ST related hardware?

I'm looking for a 13 pin DIN (Atari ST monitor connector) connector for an Eagle component library (.LBR) file.
The datasheet for this connector can be found among other places here:
http://www.cui.com/pdffiles/SDF-130J.pdf
(originating from this page:
http://www.cui.com/adtemplate.asp?invky=859919&catky=619701&subcatky1=223110&subcatky2=448284&subcatky3=)

I've been searching high and low on the web and asking in Eagle forums, but nobody seems to have drawn this component yet, and I'm too new to Eagle to figure out how to draw a new component myself, which is why I was hoping that perhaps some Atari users might already have drawn it for their own use...

Hallvard

I think it will be very difficult to restore to former glory.

Paint will fill in the surface texture, making it look worse.
```

I'd suggest one or more coats of spray-paint. Thin layers hide the texture
less. Black might be more effective than white.

Good luck.

And I'm still trying to figure out who has the schematic and PCB files
for the project. Considering that it was/is a "general public license"
project and there were several versions of it floating around (seems
like Lyndon Amsdon had the one with the most features) someoneis bound
to still have those files.

I'm having no luck getting in touch with Lyndon Amsdon though -has he
left the Atari scene?

Hi,

Krylon makes a 'no prep' paint for plastic. Found at your local hardware store.

Here is the link:

http://www.krylon.com/main/product_template.cfm?
levelid=5&sub_levelid=10&content=product_list

I don't think they have a Atari gray or beige to match. You may have to prep and prime if you want to use different paint. Using the wrong paint can craze if not prepped properly.

Paint is a low cost alternative to putting the computer in a pc tower case.

With the scarcity of parrallell interfaced printers these days I'd
like to be able to connect a USB printer to my Mega STe.

I know there are some USB projects in the works (I hope they still
are), but they either seem only to be for the CT-60 or use the
cartridge-port (and my cartridge port is already chock full, daisy
chained with a variety of MIDI related expansion gear).

Are there any ready made or do-it-yourself USB solutions available?

Hallvard

I'm working on a project where I want to daisy-chain and hard-wire several cartridge devices, but I'm having trouble locating connectors that go in the place of the cartridge connectors.

>From what I've heard and can measure (though I'm not 100% sure if it's correct or just due to misalignment in mounting/soldering in the device I've been measuring) the Atari ST cartridge connector has two rows of 20 pins each.
Those two rows are spaced 5mm apart, while the pins are spaced 2mm apart from each other.

Since my setup will be a permanent one and the cartridge port is the most critical part of the ST system as far as I'm concerned (I depend on it for my Notator SL dongle among other things, and if the dongle is jiggled a bit the software might lock up) I would like to desolder the cartridge connectors for all my MIDI expansion devices, then put connectors (IDC ribbon connectors or something like that) in their places, ensuring a good electrical connection.

So what will fit the abovementioned pin to pin spacing?

Hallvard

The Krylon plastic paint is very durable. I "did" a black Falcon. It
also works very well for motorcycles and automotive applications.
Not sure about Atari gray :)

Use automotive touch up aerosol paint.

There used to be an exact match for the old STs.

I'm working on a video output adapter board for my Mega STe (which will be recased) and would appreciate if someone could have a look at it. I've uploaded the preliminary circuit here:
http://img218.imageshack.us/img218/5111/stvgaew4.png

The board consists of a 13-pin DIN female connector (same as on the computer to begin with), a 15-pin D-sub female connector (for connecting a standard PC's VGA monitor), a switch to select monochrome (ST high) or colour (ST low and medium) modes and 3 trim-potentionmeters for adjusting the R-G-B levels when in mono mode (meaning that you can get a green screen, orange, red, gray or whatever colour you like).

I'm not entirely sure about the resistor values yet, so take those with a grain of salt.

I wanted to make the whole thing "idiot-proof" so that no monitor would blow up due to incorrect settings (e.g. inserting an Atari SC-1224 colour monitor while in mono mode, or an SM-124 when in colour mode), but haven't figured out a simple method for that yet. If someone has a good idea I'm happy to consider it.
Any comments or suggestions?

Hallvard

Oh, don't mind the switch in the circuit. I couldn't find a 4-pole double-throw switch in my Eagle component library, so I used another switch in its place for now.

It's just a single switch (4P2T as mentioned above) with 4 poles.

It would be nice to have a small LED which would light up say when in mono mode (or one LED for each mode). I assume I would need a switch with more connection terminals for something like that though...

What kind of VGA monitor do you plan to use in color mode?

All recent VGA monitors I know can not handle 15kHz horizontal sync
frequency - the exception being very old models (like Nec Multisync) and
TV-style LCD screens with VGA input.

If you want to avoid frying an incorrect monitor, you need to disable the
sync signals when operating in the wrong mode - that means separate output
connectors for the different monitor types. Most modern monitors will simply
not sync to frequencies outside their operating range, but I am not sure
about the SC1224.

cu

No specific plans as of yet. I just want the circuit to be suitable in
general for most "PC monitors".

> All recent VGA monitors I know can not handle 15kHz horizontal sync
> frequency - the exception being very old models (like Nec Multisync) and
> TV-style LCD screens with VGA input.

Looks like mono mode is the most compatible way to go then.
That's OK as I'll be using mono for most of my programs anyway (mostly
MIDI software).

> If you want to avoid frying an incorrect monitor, you need to disable the
> sync signals when operating in the wrong mode - that means separate output

> connectors for the different monitor types. Most modern monitors will simply
> not sync to frequencies outside their operating range, but I am not sure
> about the SC1224.

You mean like having one connector from the adaptor circuit (e.g. 15 pin D-sub) which is connected for mono mode only (35.70 KHz hor/71.2 Hz vert) regardless of the mono/colour switch setting, and another connector which is physically different which can handle the above frequency as well as colour modes (15.75 KHz hor/50-60 Hz vert)?

Multisync monitors (with the 15KHz capabilities) were more common several years ago, weren't they? I remember having an NEC Multisync II myself. Great for colour, but not good on the eyes for mono. If I'm not mistaken it had a 9-pin D-sub female connector (I built a switch-box to connect between my STe and the monitor).
If this was a "standard" back then I could have an additional mono/colour output connector which would be a 9 pin D-sub male on the back of my recased Mega STe.

That would solve the PC monitors, but how should I go about to make the Atari monitor connector fool-proof? I know that the computer defaults to colour mode, but if an Atari mono monitor (SM-124, SM-125 etc.) is inserted into the monitor connector, pin 4 (mono detect) goes to ground as this is wired that way internally inside the mono monitors.

It sounds tricky to be able to make the computer go to mono mode when an SM-124 is inserted, and colour mode when an SC-1224 is inserted *regardless* of which setting the mono/colour switch is set at.

Which monitor type (Atari colour or mono) would be harmed by the wrong frequencies?

Oh, about the 4PDT switch; there are interlocking push-button switches with more than 4 poles available, looking like this:
http://www.maplin.co.uk/Module.aspx?TabID=1&ModuleNo=2596&doy=14m2

That would mean more possibilities to switch on/off lines, but perhaps not of much help in making the 13-pin DIN connector "idiot proof" like on the unmodified Atari ST.

Hallvard

You can use a LCD TV with VGA input. I have a 19" TV from Samsung that works fine in all resolutions with my old STE. I have to connect it to the VGA port for hi-res and the SCART port for low and med-res.

If you're making an adaptor circuit you could have a VGA connector for hi-res and a SCART connector for low/med-res, and use a switch to switch the syncs between the ports.

That sounds good - a QPDT switch should be enough:
 - Mono detect
 - HSYNC
 - VSYNC
 - CSYNC

cu

> You can use a LCD TV with VGA input. I have a 19" TV from Samsung that works fine in all resolutions with my old STE. I have to connect it to the VGA port for hi-res and the SCART port for low and med-res.

Pretty cool! Atari multisync monitor and TV all in one!

> If you're making an adaptor circuit you could have a VGA connector for hi-res and a SCART connector for low/med-res, and use a switch to switch the syncs between the ports.

Although a SCART connector on the back of the computer is overkill in my opinion. My TV has a AV in connectors in the front though (standard video signal and left/right audio; 3 phone connectors). Will a connection from pin 2 (composite video out) of the Atari 13-pin DIN socket to the TV's "video in" give me the correct signal for the TV in ST colour mode?

Then again I suppose a SCART connector would allow me to give the TV a better quality signal since the R-G-B signals are separated.

I definitely want a "video out" connector, but I'll think a little about the SCART connector as the whole video output section of the computer will have quite a lot of outputs. So far this looks like the solution:

http://img412.imageshack.us/img412/8388/vgablockhu9.gif

Everything is based on my circuit diagram (http://img218.imageshack.us/img218/5111/stvgaew4.png) mentioned earlier in this thread.

When it comes to "idiot-proofing" it....
What exactly can damage a monitor/TV with the wrong signals (signals outside the frequency range of the TV or monitor)?
I don't know if the SCART and composite out signals will be safe that way, but they will be connected only to the colour signals, so when the mono/colour switch is set to "mono" they will not receive the "mono" signal (pin 11 from the Atari ST), but the R. G and B lines.

The multisync connector will also be OK of course, but using a 15-pin D-sub just like with the VGA mono output connector might not be a good idea as it'll make it too easy to insert a VGA monitor there and blow it up.

I might use a 9 pin D-sub instead (which is what I used when I built a multisync switch-box years ago when I used an NEC Multisync II monitor with my STe).

Finally there's the new 13 pin DIN output which will accomodate for both Atari mono and colour monitors. With an unmodified ST it's idiot-proof already since the computer defaults to colour modes, but switches to mono mode if pin 4 (from the ST) is connected to GND as it is with Atari mono monitors, but in this case I'm overriding this by the manual mono/colour switch.....

If an Atari mono monitor is inserted while the switch is set to "Colour", then pin 4 will go to ground (because of the monitor's internal connection) and reset the computer setting it to mono mode. I guess it'll actually give the monitor the proper mono video input as well!
With an Atari colour monitor however when the computer is set to "mono" I don't think anything will change when it's inserted. Will the mono output signal harm the Atari colour monitor?

Looks like a non-idiot proof solution would be easy to do, but if possible I would like it to be idiot-proof so that nothing will be blown up if used with the wrong mode.

I'm not sure what you mean. Are you saying I should be able to switch
all of the above signals? My circuit diagram (http://
img218.imageshack.us/img218/5111/stvgaew4.png) currently shows the
following signals to be switchable:

Atari 13 pin DIN               VGA D-sub
-------------------------------------------------------
11 (mono)                        1 (red)
11 (mono)                        2 (green)
11 (mono)                        3 (blue)
 4 (mono detect)               4,5, 6 etc (GND)

How can a 4PDT switch be enough for your suggestion when I also need
to switch the R-G-B signals? And what is "CSYNC"?

Even adding an external hard drive is getting tricky and probably not that is available "off the shelf". Ben (http://www.aracnet.com/~atari/st_hard.htm(seems to be the only place that has some SCSI adaptors and a SCSI drive would easily fit inside a MEGA case, but at $100 they are rather expensive. Techy_alision was developing a SCSI adaptor but not sure how far its got....

Correct.

>How can a 4PDT switch be enough for your suggestion when I also need
>to switch the R-G-B signals? And what is "CSYNC"?

Why would you want to switch the RGB signals?

RGB is only needed by the color monitor, the mono signal has its own line, so as long as you have one connector for a mono monitor and one for a color monitor, you only need to switch the sync signals ans mono detect.

cu

I am looking into getting an Atari ST. I grew up and was in high school/college during those years and have a desire for a lot of the older computers. I'm actually getting a Apple II currently and am looking at a Amiga 500. With Atari being so big back then I want an

Atari as well. Should I look at the 520 or the 1040 or is there
another model? Since I only used Commodore back then I know little
about Atari.
As well, my main concern is the monitor. What type of monitor does
the ST use? I have all LCD vga/dvi monitors now. I prefer to be able
to share monitors so would it output to these?
What are the best sources for ST software/games?

OK, I understand.
But this is only a solution to the situation if the two output
connectors are physically different from each other, so that it will
be impossible to insert a cable for the unsuitable type of monitor is
used. I recently learnt from another forum that modern monitors have
no problem with incorrect input frequencies (frequencies outside of
their range) as they simply don't display anything at all or show an
error message.
But older monitors I was told may often blow up with a puff of smoke,
permanently damaging them.

I assume the Atari monitors can be categorized as "old" and that the
incorrect frequencies can damage them. How can I prevent this from
happening when I'm manually switching the two ST modes?

You could do that, but I strongly advise against it. The image quality will be far inferior compared with a RGB connection. You could always use a smaller connector (e.g. a DB9) on your adaptor and make a special cable to hook it up to the TV's SCART.

> When it comes to "idiot-proofing" it....

There's no such thing as "idiot-proof" ;-) An idiot can destroy anything.

> I don't know if the SCART and composite out signals will be safe that way, but they will be connected only to the colour signals, so when the mono/colour switch is set to "mono" they will not receive the "mono" signal (pin 11 from the Atari ST), but the R. G and B lines.

Correct. You connect the RGB lines from the ST to the RGB lines on the SCART connector, and the mono line from the ST to the RGS lines on the VGA connector. Then you switch the syncs and mono detect line. It's as safe as it gets.

> Finally there's the new 13 pin DIN output which will accomodate for both Atari mono and colour monitors. With an unmodified ST it's idiot-proof already since the computer defaults to colour modes, but switches to mono mode if pin 4 (from the ST) is connected to GND as it is with Atari mono monitors, but in this case I'm overriding this by the manual mono/colour switch.....

You could use a relay to disable the mono/colour switch when pin 4 is grounded on the 13 pin port. E.g. connect the mono detect line from your switch in series with a N/C relay that opens when pin 4 is grounded on the 13 pin port.

By using separate connectors for color and mono and disabling the sync
signals for the inactive connector.

cu

If "all" you want to do is play games then I think most games will work on a stock 520. A few need 1024, but only a few...

> Since I only used Commodore back then I know little
> about Atari.
> As well, my main concern is the monitor. What type of monitor does

Only if they take 60Hz frame rate. Or if you have a frame doubler for the Amiga that would probably work..

> What are the best sources for ST software/games?

If you want new try E-Bay. There used to be some download sites on the net, but I have not seen one in ages....

Okay, once a month I backup the C: drive on my Mega ST that runs my BBS.

Using the latest versions of ExtenDOS, HDDriver, and the CDWriter Suite,
it burns 73 megs (73350511 bytes), in approx 25 mins. Thats 73 megs, 318
folders, and 5882 files.

This is on a 4 meg, Mega ST, running at 16mhz via an Adspeed accelerator.

The CDRW is a Plextor (SCSI), at 2x burning speeds. The drive itself will
go up to 8x, but when I tried it at 4x one time, I got errors. It does not
support "burnproof" or under-run technology.

Hope this helps. :)

He make the c't-ROMPORT buffer. The archiv romprtp2.zip contain a version with small changes.

> the guy behind the "Doit" info archives I think)

Robert Schaffner make the "Doit" info archives.

Your images shows not the c't-ROMPORT buffer.

Oh, that's quite a while compared to most other systems of today. Just about everything I have for my Atari ST fits (uncompressed) within a 540 MB hard drive, so in other words I could fit absolutely all my files and programs on a single CD-R (650 or 700 MB) disc! But in comparison to the above it would take about 4 hours to do that!

On the other hand I can't think of any better way of backing up my system if I'm not to use an external hard drive, and I'm sort of trying to minimize all the bits and pieces attached to my computers. I like to keep it clean and simple rather than gets as many boxes, monitors, computers with flashing lights etc. as was my aim in my younger days ;-)

I do still have an old SCSI tape-streamer which I used for an old Mac several years ago. I never tried it for my ST, but I suppose it should work (I did download a streamer program for the ST, but the name slips my mind), however, that's another huge box which I'd like to get rid of.

> This is on a 4 meg, Mega ST, running at 16mhz via an Adspeed accelerator.

Does the burning speed make a big difference when you run the Mega ST at 16 instead of 8 MHz?
As I'm using a Mega STe I can choose between 8 and 16MHz as well.

> The CDRW is a Plextor (SCSI), at 2x burning speeds. The drive itself will go up to 8x, but when I tried it at 4x one time, I got errors. It does not support "burnproof" or under-run technology.

I have a Yamaha CRW-4416 (http://www.yamahamultimedia.com/yec/products/cdrw/crw4416sxz.asp) SCSI drive which I've used with a Mac for years. It's worked very well, but I've never tried burning CDs on my ST. I have however successfully managed to *read* CDs using a Plextor CD-ROM drive (don't remember the model number) with free software (I don't have the ST here so I can't say what the software was called). It might have been some free software in association with HDdriver which

I bought many years ago and an ICD Link II host adapter.

I've been thinking that all the while I'm modifying my Mega STe, recasing it and so on I might as well give it CD and perhaps even DVD writing (or just reading) capabilities. I might get some sort of IDE support for the computer, so in that case it's easy to get hold of a cheap DVD writer. But from the above that route might not sound like such a tempting one after all.
Maybe I should just stick to the Yamaha CD-writer I already have.

Is this the same file as I uploaded?:
http://home.c2i.net/w-460389/atari/rombuff.zip

The documentation seems to say that the buffer is by Robert Schaffner.
If that one I have is by Robert Schaffner, where can I download the
one by Michael Kugelmann? Google can't help me find "romprtp2.zip".

Well, it is certainly slower then modern systems, but really, I don't even
notice it. I mean, I set it up, let it run, go do something else, come
back in awhile and its done... :)

Exactly! I also could not think of a better way to back up my all
important BBS files easily and handily.

I've never tried tape, so I don't know about speeds 'n such...

I believe it does - if I recall correctly, when I was first setting it up,
I had to drop down to 1x burn speeds when running at 8mhz. As long as I
run at 16mhz, 2x is fine here.

Also, when its reading all the folders and files, before burning, the
16mhz speed seems to make a big difference as well.

Well, setting up a DVD for reading would probably be okay (there is a bit of that awesome factor to having a DVD on your ST!) - sure is lots of storage there! Otherwise, for me, and my setup, my CDRW fills my needs just fine. :)

True. I guess you can't get the cake AND eat it! ;-)
Realistically thinking we probably can't compare a 20 year old system
with what is available today, and being able to read/write CDs at all
should probably be considered an achievement in itself.

Good thing I have 16 MHz then.
I assume computer memory also plays a significant role although the CD-
writer should also have some buffer memory. According to the website
in my previous URL my CD-writer has a 2 MB buffer. Half the memory of
my Mega ST! :-)

True. I have to admit that I get hung up on stuff like that, then
start thinking if I really need it.
I've got this huge archive of all my downloaded and bought Atari
software on my Mac hard drive and occasionaly update write an updated
version to CD.
The idea is that instead of looking through half a million floppies I
just insert the CD if I need to install something new, find some
reference files or whatever.
And of course for backing up stuff it would come in handy as well.

Floppies are OK, but they tend to pile up and you spend more time searching for the one you need than actually getting work done. They're also painfully slow compared to other media, and for exchanging data with my Mac Powerbook laptop I first have to plug in my external USB floppy drive (as I said I don't like too many bits and pieces connected to a computer. Tidy an minimalistic is the way to go for me).

A DVD would come in handy because I could read a DVD written on the Mac without worrying about it being a type of media compatible with the ST or not. Of course it's no biggie to dump whatever I need to a CD-RW for situations like that.

If I could get a networking card of some kind it would gratly simplify things as I could just transfer files back and forth between the Mac and the ST, but alas I haven't been able to find a networking card yet.
They're either impossible to find, they're crap, the recent ones made by Atari enthusiasts are no longer made or they only connect via the cartridge port (and my cartridge port is chock full already).

> - sure is lots of

> just fine. :)

I think I'll just try it all out with my existing Yamaha SCSI CD-writer first, then take it from there. After all I already have an ICD Link II as well as a Link 97. I believe the latter is the most advanced and versatile one if I remember correctly from Uwe Seimet's previous postings now and then (and no -I won't be selling my ICD Link II. At least not for a while, until my Mega STe project is completed and I might not need all that extra hardware lying around).

I'm constantly amazed at what can still be done with these beloved old
machines. :)

I believe that is right - my understanding is that the Link 97 (because of
SCSI bus arbitration support?) will work with many newer SCSI devices that
the Link and Link 2 will not. I know I've had drives that would not work
on my Mega ST/Link 2 setup that would work with my Falcon.

This is correct. In contrast to Falcon and TT, where initiator identification and bus arbitration can be handled by software, the ST needs special hardware for initiator identification. The LINK96 and LINK97 are the only host adapters I know that support initiator identification. Without this feature, which means that the computer has its own SCSI ID, some devices will simply not respond at all to SCSI requests.

Bus arbiration is only relevant if several devices (computers) compete for the bus, which is normally not the case with the Atari because only one computer (initiator) is connected to the SCSI chain. Nevertheless, if you have a Falcon or TT you can connect more than one computer to the SCSI bus, and bus arbiration will ensure that there are no conflicts on the SCSI level. There may be caching conflicts, though, when both computers maintain their own sector caches and write data back to the same partition. But this is another issue, not related to bus arbitration. What bus arbitration does ensure is that as long as both computers write to different partitions (on the same drive) or always read and never write data to the same partitions there is no technical problem like the SCSI bus being blocked.

> The LINK96 and LINK97 are the only host adapters I know that support initiator identification. Without this feature, which means that the computer has its own SCSI ID, some devices will simply not respond at all to SCSI requests.

Then my Link 97 is the way to go :-)
I've heard of a Mega STe specific version, but mine looks very similar to an ICD Link/Link II but without the Link II's LED).

I suppose the Mega STe version is the same adapter as the one I have, but without the 50 pin and 19 pin connectors/cable, but rather IDC connectors for internal use. They're both technically the same, aren't they, and there's no disadvantage in using the ACSI port for this instead of an internal connection, is there?

My Link 97 is very plain. There's only a paper label stuck on the outside of the SCSI connector saying "Link 97" and its serial number. Looks very home made, but I suppose the whole thing is just a small production run.
I bought it second hand several years ago and haven't used it for a long time. I noticed that there's a loose wire at the end which goes to the PCB/SCSI connector end. It's the black wire which I trace back to pin 12 of the ACSI connector (reset).
Any reason this wire should be un-attached? It could of course just have fallen off.

I'm also wondering about the "Termpwr" pin (pin 38 of the SCSI connector). As far as I can remember this pin is used to power Atari SCSI host adapters. At least my ICD Link II worked that way, and the way to do it was to attach a +12V wire from the external hard-drive case's power supply to that pin (inside the hard drive enclosure that is), so whenever a Link II was to be attached it would get its power (and thus light up the LED). In such a situation that's fine, but I'd rather have the SCSI host adapter powered up to begin with, which is what I intend to do here as I'm recasing the Mega STe.

So if anyone can confirm that the Link 97 also expects +12V from the SCSI device's pin 38 I propose to do the following:

1) Remove the connection pin 38 (of the Link 97's SCSI connector) from the Link 97 PCB. In other words, the Link 97 will never get its power from an external SCSI device.

2) Instead, connect +12V from the Mega STe itself permanently to the same location on the Link 97 as before.

This way, it doesn't matter if the externally connected SCSI device(s) have or don't have +12V at their Termpwr pins. So the Link 97 won't cease to work (because of lacking power) or .. eh.... cease to work, due to dual +12V sources.

Hallvard

Ron, today I am burning all my files to cds on the st and converting them to
the pc and burning a DVD, all my bbs files will be going to DVD today.

It been taking 5 hours to burn the 4 gigs fof files to cds though.

Wow! Big job, for sure. Still has that ultra coolness factor to it though.
Imagine every single file ever made for the ST, available on one DVD from
our BBSs... :)

Yes. I wish I could get my hands on 8-bit stuff also. But right now. I am
almost done burning my 4.5 gigs of st stuff, then I am going to get the bbs
file system up and off! But Yea I am going to order a few more of those dvd
drives.

If you just need CD support, all current CD-only recorders support burnproof, so you don't need to get a DVD recorder (but there's not a big price difference, so you might as well).

>How well does a normal ST (or Mega STe) write to CD-R/W anyway?

If you use CDbackup, you should be able to get 2X on an ST. That will give you a 540MB backup in about 35 minutes. If you need to do 1X, that will take twice as long of course. It will work fine :-).

Roger

Hi!
Just saw this thread, so will be responding to individual comments /
questions as I see them ...
On Thu, 1 Mar 2007 23:12:17 -0500, "Chuck B" <cabacon@cox.net> wrote:

>I think I would not be able to burn a dvd on the Mega STE. I am sure the STE
>is not fast enough.

All DVD recorders that I know of support burnproof.  Writing to DVD from
an STe will be slow, but it will work.

Roger

With an ST, there probably isn't enough horsepower to do 4X. 2X may be
supported with older (max @x speed) CD-RW disks, it depends on the
drive.

 Burnproof may help,
>however, it does not seem to be perfect: a friend did a stress test by

Burnproof will certainly help, although you should still set the drive
recording speed as low as possible. You might get problems with audio,
but I haven't seen one with data. USB 1.1 is certainly a stress test,
even slower than ACSI ...

>>Note that this calculation assumes that the ISO CD image is already

To create an ISO disk, the image is built first, so the actual writing
to disk is as fast as possible but the time to create the image is
significant (and you need free space for the image). But if you're just
using it for backups, use CDbackup instead, it just copies a raw
partition image and is about as fast as you can get ...

Roger

As noted before, unless you need the ISO format for compatibility with
systems that don't have CDbackup, using CDbackup will be much faster!

You'll need the Link97 for your Yamaha, because the Yamaha requires arbitration. The ICD stuff is nicely made & reliable, I just wish they'd come out with a Link III to support arbitration.

No reason that I know for it to be loose. The wires aren't gripped by
the shell as well as they might be, it's certainly possible the wire
fell off.

That sounds OK to me. The Link97 does require power on that pin.

Faster is better, but 16MHz on ACSI is probably not fast enough for 4X, although 2X should be easy.

The 4416 is a very good drive, in fact it was the main one I used while developing recording support for ExtenDOS.

Have you ever tried whether a CD-ROM drive that can be configured to
read/write sectors with 512 bytes can boot from such a disk?
I guess most modern drives cannot do this trick anymore, but I once
tested it with an old drive: After burning a 1-to-1 copy of my hard disk
drive I was able to access the CD without any CD-ROM driver. All I
needed was to configure HDDRIVER to treat CD-ROM drives like other
removable media drives.
I did not test this with a CD image containing a correctly configured
bootable driver installation, but booting from such a CD might work as
TOS boots from the first devices that provides a bootable root sector,
regardless of the device type.

I've just uploaded a block-diagram of my Mega STe and all its PCBs
that I'm working on:
http://home.c2i.net/w-460389/atari/megaste_block.png

As you can see, the cartridge chain is pretty extensive, so I'm sure I
need buffers somewhere along the line, but I'm not sure where and how
many buffers.

There have been some postings recently in relation to the advantages of the Link 97 host adaptor over the ICD Link and Link 2 for certain SCSI applications requiring arbitration. Are the Link 97 adaptors still available anywhere? The listings I was able to find at Wizztronics, Best Electronics, Atari Workshop, etc. all say they are sold out. Anyone know of a source? Perhaps there would be enough demand for it to be worthwhile to run off a batch of new DMA to SCSI adaptors that support arbitration if someone out there has the necessary skills.

Haven't tried this.  Without looking at the source again, I'm not sure
if the partition image is close enough to an exact copy to work (I
overwrite some bytes to record stuff like partition letter, date/time
dumped).  Unless it's connected to the ACSI port via a Link96/97, it
would have to be mounted on a drive that doesn't need arbitration (since
IIRC TOS doesn't support arbitration).

Since I'm getting no reponse here, are there better suited newsgroups
or forums for this sort of thing? I've tried several electronics
related related groups, but no reponse there either.
I wouldn't think the circuit and my idea is too complicated for anyone
experienced in electronics.

Hi all

I've got a couple of 354 disk drives that don't work purely because the
drive belt seems to have turned to sludge, does anyone know of a
suitable replacement? I've tried elastic bands which work for a bit, but
then slip off the drive wheel thing.

thanks for any help,

Thomas

The STe has two "enhanced" joystick ports which (for some strange reason) the Mega STe does not.
I've read through the Atari enhanced joystick port FAQ (http://www.gamesx.com/controldata/ejp_faq.htm) and also tried to find some information at the STe fan page (http://atari-ste.anvil-soft.com/index.htm) but all I could find was (from the mentioned FAQ in section 2.3):

Most software that supports the EJPs determines their presence by checking the machine type, and ensuring that it is an STe or Falcon. The memory locations used for accessing the EJPs are, however, unused on other machines (at least, according to "The Atari Compendium"), so it is conceivable that they could be "retro-fitted" to another machine, such as a Mega STe or TT.

The FAQ is from 1996, so since then someone reading this might know more.....
Can these ports be retro-fitted to a Mega STe, or are they not similar enough for that?

I've often thought about that, would be great to play Substation on a
MegaSTE with a Jag pad;-)

I think this can be. You need four 74LS373 and two LM 556 and a GAL for the adress.

You should look at the schematic <http://dev-docs.atariforge.org/>

Hmm, that:

telnet stguild-bbs.dyndns.org

works fine here...

Aha. That hairy old chestnut. Try ICD disk utilities. My old one used to
lock up on boot if HDdriver was used. For some bizarre reason I found
that if you ran the manual program with HDdriver you had to have the
falcon running for a few minutes (maybe 10) before it would work. Voodoo
I think. But with the ICD pro utilities it worked all the time. Never
did work out why.

Cheers

Mark

Actually it is not mine, but I have the opportunity to buy one. The current owner told me that he tried to install this card in more than one Falcons and each behaved the same. But it was several years ago. I just wanted to know if there is somebody who can repair this card (is it worth to buy or not).
I don't know which prg he tried but if this help I can ask him.

On 4 Apr 2007 00:40:05 -0700, vas.jozsef@karatnet.hu wrote:

In the US, http://www.atycomputer.com/, but that's a long ways away.

When the Mighty is installed, the Falcon CPU is physically disabled (some pins must be lifted), along with some other wires that must be soldered to the main board. Installation is almost identical to the Afterburner.

If the Falcon boots when powered on (Mighty installed), but only fails when the memory or speed progs are run, then the Mighty is likely ok and the installation is not correct.

With a Mighty installed, a Falcon will lock up even if it seemed to not have trouble before the installation, if the buffer mod isn't correct and do just as you have said when the clock and memory apps are run. In addition, NVDI MUST be used and loaded first in the auto folder as it disables the blitter (must be done on the Falcon with the Mighty) and provides a FRB cookie for exchanging data between alternate ram and ST ram. HD Driver can install an FRB, but have found the Mighty does not work properly using that method for some reason.

There isn't much to fail on the card, unless it's damaged.

The Mighty with alternate ram will run like a TT with alternate ram, of course with all the Features the Falcon has over the TT.

It's very compatible, CAF cannot run in alternate ram, but the memory space can be used. Rainbow Multimedia will not run from alternate ram, but other than those few, most applications can run from alternate ram as long as NVDI is installed. Only thing that is necessary to run those apps is to set the fast ram flag to off. The clock speed does not cause problems, just the addition of alternate ram. Also, the Mighty must have simms installed to work properly, won't work empty, at least what I read, never tried to use it with the banks empty myself. Earlier Mighty cards had to have jumpers set to recognize the memory installed, newer revisions don't have those jumpers.

It's the best mod to do to a Falcon since the Centurbo is not available, and CT060 is hard to find. The Mighty works with the Expose card, Falcon Speed card, NOVA card, and what ever else you can stack on top of it. Headers would have to be soldered to the top of the card to fit the expansion. The jumper on the expansion bus is enabled on the Mighty as well, so that trace must be cut if an expansion card is installed.

Opinion. Since the installation is tricky, I'd bet the card is good. Depending on the cost, it's a valuable upgrade.

That 's about all I remember.

Thanks. I think I will buy then and see what happens ;)

Hi Folks,

My Falcon has a dead clock, and it has the MK48T87B. I ordered a replacement online and received a Dallas DS12887+. I'm hoping that someone will know enough about these chips to answer a few questions:

1. This is pin-for-pin compatible with the MK48T87B, I hope. Is that right?

2. The MK48T87B has all of its pins. The DS12887 has some gaps, there are a total of six missing pins, some on either side. But if #1 is yes, I'm guessing that these are extra grounds on the MK48T87B. Is this right?

Rather than attempt to desolder the old chip, what I'd like to do is cut the current chip out by using a dremel tool to slice off the tops of the pins close to the chip's plastic. Then I can solder a 24 pin socket on top of the existing pins.

I've heard of this being done before, but I'll need to be very careful to avoid damaging the traces on the motherboard. I believe I can protect the traces by cutting some thin but sturdy material to the right width and sliding it underneath the IC to function as a shield.

Any thoughts on this approach?

Personally I would (and will) desolder the IC. I have 2 of them to do
this week. Just remove the board and carefully (also quickly) desolder.
I am considering putting in a socket, but it will depend on clearance
under the keyboard for my stock model. Will probably socket the towered
Falcon. Considering the cost of a new Falcon board you might want to
take it to a electronics repair shop.

Not necessarily!!!! I used to own one. There were holes for the
expansion connectors, but no signal lines!!!
I don't think I was the only one..

Thanks Mark.

Mine is in the Falcon Rack case, so clearance isn't a problem.

Fortunately there is space around the clock chip on the front of the motherboard so there's some room for work.

24 pin sockets are getting hard to find. I used to be able to buy one in town. Now I get to find out what it costs to ship a $2 part... :p

Since you're obviously happy with a soldering iron and such, why not
consider taking the top off the NVRAM chip and wiring up a CR2032 coin
cell in a holder instead? This has been mentioned in here or in
c.s.a.tech many times before.

Oonce you have sliced the top of the chip I would have thought that the pins
could be removed with a solder pump fairly easily. This was the approach I
took with my STE when I replaced the DMA chip.

I agree.  You don't need a new clock chip -- your clock chip needs a
new battery.  If you don't want to desolder, I would strongly consider
just wiring in a new battery.  Frankly, I if I of little electronics
background can accomplish the battery replacement, practically anyone
can.

Hi Derryck,

This approach didn't work for me. On advice in another message, I tried prying up the upper half of the MK48T87B.

Unfortunately, I found that the battery and other components were embedded in solid plastic in the upper half. It was filled with a kind of epoxy. Prying it loose pulled its very thin leads out of the lower half of the chip, so there's nothing left to work with.

I'm not sure if this is how they all are or not, but those leads are extremely fine and would have been difficult to solder. I looked at the

```
example image someone had posted, and the interior of my chip doesn't
look anything like that.  There were no components mounted on the lower
half.

Thanks for the advice.

Unless it's advertised to read a DVD, it won't. You need a DVD-ROM
drive or a DVD burner or a 'combo' drive (combines CD burner & DVD
reader). But note the following gotchas:
. all current DVD readers & burners are IDE devices, so you need to
convert from IDE to ACSI. The only way I know of doing this is to use
an IDE-to-SCSI converter plus a SCSI-to-ACSI converter.
. the SCSI-to-ACSI converter should be a Link97 rather than an ICD
device, since I'm 99% sure that the IDE-to-SCSI converter requires
arbitration.

It can be done (I've done it), but it's probably cheaper & easier to buy
a Falcon & connect directly ...

>From your Anodyne Extendos 4 page (http://www.anodynesoftware.com/e4/
main.htm) I read that it supports DVD drives.

If I get hold of or build myself an IDE interface for my Mega STe (so
that I can connect a standard IDE hard drive (or Compact-Flash memory
card reader as a non-mechanical and absolutely silent "virtual hard
disk"), does this mean I can also connect a standard off-the-shelf IDE
DVD-burner, assign the master/slave jumpers of the hard drive and DVD-
writer correctly and use Extendos 4 to be able to use it as a CD/DVD
reader as well as write to CDs and DVDs?

I also have a Link 97 SCSI adaptor as well, but I see no need to use
that if I can get IDE support from my computer.

It's a Mega STe with a TV output on the back. I assume this is just an
RF signal for connection to old fashioned TVs without any sort of
video input?

Perhaps I could use some other kind of connector than SCART as I find
a SCART connector to be a bit on the large and impractical side.
Not quite sure what could replace a SCART connector in a standardized
way though...

Talking about SCART, I searched the web and found the following
connection info for wiring up a SCART to an ST:
http://www.algonet.se/~guld1/hardware/atari-scart.html

Is it correct?
Pin 8 seems a bit strange though: +12V to "AV mode switching".
And since this is a Mega STe with stereo audio I would probably skip
connecting pin 1 from the ST to pins 2 and 6 and instead tap the
separate audio signals from somewhere else that delivers line level
signals.

Hallvard

Spot on - you tune your TV into the signal just like any other RF TV signal.

The STe would have come with a Y-splitter or a small box with a changeover switch to mix in/switch over the feed to the TV.

As a side result you also get composite video out on the DIN connector
(as has already been stated above).

Yes, this looks correct.

> Pin 8 seems a bit strange though: +12V to "AV mode switching".

Pulling this line up to 12v will normally cause the TV to automatically
switch to the SCART input. You don't have to use this, but if you do (and

you make it switched!) and you use a LCD TV with SCART and VGA, the TV
could automatically switch between SCART and VGA.

Yes, you should use the MSTE's RCA connectors for stereo.

>
> You could do that, but I strongly advise against it. The image quality will be far inferior compared with a RGB connection. You could always use a smaller connector (e.g. a DB9) on your adaptor and make a special cable to hook it up to the TV's SCART.

I've been trying to find alternative solutions to the SCART connector because I'm not too fond of it. It's big, bulky, falls out easily, blocks other connectors where the thick inflexible cable comes out and also needs a very sturdy PCB mounting because of this.
Alas it seems that there is no other standardized sort of connector that will give me superior display quality on a TV or colour monitor.
I looked into S-video, but from what I've read it's not much better than standard composite video. Besides, I don't have a clue as to how to get the chrominance and luminance signals out from the Atari ST.

> > I don't know if the SCART and composite out signals will be safe that way, but they will be connected only to the colour signals, so when the mono/colour switch is set to "mono" they will not receive the "mono" signal (pin 11 from the Atari ST), but the R. G and B lines.
>
> Correct. You connect the RGB lines from the ST to the RGB lines on the SCART connector, and the mono line from the ST to the RGS lines on the VGA connector. Then you switch the syncs and mono detect line. It's as safe as it gets.

I follow you when you talk about switching the mono line, and the same goes for the mono-detect line (which I believe is what the Atari ST senses which mode it should be set to: when this line goes to GND the computer goes to hires mono mode, otherwise it's colour mode), but I don't understand where I should switch the sync lines as they both have the same connections in mono and colour modes.
I've made a new schematic, modified from the old one. This new schematic (http://img353.imageshack.us/img353/5604/vgamultism8.png) has 4 output connectors, the mono/colour switch and of course the input connector which goes to the 13-pin output from my Mega STe. The 4 output connectors are as follows:

- SCART (colour) for TVs
- Composite video (colour) for AV inputs on TVs
- VGA (mono) for standard PC VGA/SVGA monitors
- Atari output (mono and colour) for Atari's own SM-124, SC-1224 etc.

The new Atari output is shown without any connections, but is in fact connected to the same 13 pins as the input (I just didn't want to mess up my schematic with unnecessary wires).

> > Finally there's the new 13 pin DIN output which will accomodate for

> switch in series with a N/C relay that opens when pin 4 is grounded on the
> 13 pin port.

I'm not quite sure I follow when you talk about a relay.
But from the sound of it (and looking at my new schematic) I believe
you're saying that when a *mono* Atari monitor (SM-124 etc.) is
inserted, then the monitor itself will connect pins 4 (mono detect) to
pin 13 (ground) and thus set the computer to hires mono mode, which of
course matches the monitors scan rates!
If the switch is set to "colour", then pins 4 and 13 would still short
when the SM-124 is inserted, so in that case it would revert to mono
mode. In other words, the Atari mono monitor would be safe regardless.

But what if an Atari colour monitor is inserted while the switch is
set to "mono"? In that case the insertion of the monitor wouldn't
change the fact that pins 4 and 13 are already shorted, meaning that
hires mono would still be selected.
I'm stuck at this point, or perhaps I just need some sleep to see
things clearly ;-)

Hold it!!! Regarding the switching of those sync lines... is the idea
that by using the switch I also control which connector gets H-sync
and V-sync signals at all?
I've got to look over my schematic again when I'm a little less tired
than now, but that sounds like a good idea which would protect the
monitors even a bit more.

So finally it's only the matter of being able to protect the Atari
colour monitor from damage.

I think I've almost found the solution now. Have a look at the following schematic which switches the H-sync, V-sync, mono and mono-detect lines. By using a 6-pole switch (just in case I needed a couple of extra lines to switch) I've even added two LEDs indicating which mode the computer is set to!

http://img166.imageshack.us/img166/7161/vgamultisyncswitchhf8.png

Can someone look it over? I've been staring at it so long that I probably wouldn't notice even the most obvious mistakes ;-)

I am not sure about the Mega STe, but on older STs the modulator also
creates the composite. If you have RF out you will have composite...

I don't think there is one. Even SCART is pretty non-standard. You could use
either a 9-pin D-Type or perhaps an 8-pin DIN...

> - CSYNC

I've kept wondering what C-sync was until I came across a video
related circuit where "composite sync" was mentioned, and also makes
sense for the SCART connector since there's no H-sync or V-sync signal
to be found.
So with my even newer circuit than my previous posting I've switched C-sync for colour mode as well.
You're right about not mentioning the "mono" line. With separate
connectors I no longer need to switch that line, so yes - a 4P2T
switch should do.

If I go for the inclusion of the indicator LEDs however I'll use a
6P2T switch as used in my schematic.

Here's my very latest schematic which should surpass all of my
previous ones:
http://img242.imageshack.us/img242/7507/vga3by5.png

Does it look correct?

Use a DB9-connector on the adapter and a short DB9<->SCART (female) cable
which you can connect a normal SCART cable to.

By "switching" I mean that you select which port the sync-signals goes to.
E.g. in colour mode there's no sync on the mono/VGA port and vice versa on
the SCART/colour port. There's no way you can damage a monitor with out of
range frequencies if the syncs are disconnected ;-)

Hmmm... Didn't think of that. Check your DIN13 connector (the one you're
gonna use on your adapter), some of these has a switch that's grounded
when a connector is inserted. In this case you can use this switch to
disable your mono/colour-switch by using a relay.

> Hold it!!! Regarding the switching of those sync lines... is the idea
> that by using the switch I also control which connector gets H-sync
> and V-sync signals at all?

Yes.

Where are you from, the US? ;-) There's SCART connectors on every TV,
DVD-player and VCR sold in Europe the last 15 years.

Yes, that's one way to go.
In any case adding a SCART connector of some sort is a great idea, especially with an LCD TV such as the one you have with a SCART input (Atari ST colour mode) and VGA input (Atari ST mono mode). And a TV as well.
And I'm sure that with a suitable adapter cable, even my Mac could be connected.

Yes, I understood it after a while ;-)
See my latest schematic (http://img166.imageshack.us/img166/7161/
vgamultisyncswitchhf8.png).

And after re-reading your comments about pin 8 of the SCART connector
(AV mode select) I've changed my schematic ever so slightly to go
through the switch, using the side of where the "colour" mode LED is
connected to +12V.

So these switched 13 pin DIN connectors actually exist?
I've been wanting to get those, but can't find them anywhere. Normal
13 pin DIN connectors however are available from several places.

I've been thinking about the issue of those Atari monitors. If I can
get hold of a 13 pin DIN with a switch it may be easier, but even
without I have an idea....

The Atari mono monitors should be fine. If switched to mono mode
everything will be set up already, but if the switch is set to colour
mode, then it will still set the computer to mono mode (as far as I
know) because pins 4 (mono detect) and 13 (ground) are connected
together inside the monitor itself.
However, the sync signals for any TV (or suitable monitor) connected
to the SCART or composite out connectors will still be fried.

I think I need to build some sort of electronic circuitry which
"senses" when:

a) an Atari mono monitor is connected

and
b) when a VGA monitor is connected

In other words, I want the computer to act exactly like before
(default to colour mode if no mono monitor is connected, only this
time it will also include a VGA monitor), regardless of the switch
setting.
I'm thinking that the Atari mono monitor could be "sensed" by it's pin
4+13 connection, and a VGA monitor, perhaps by sensing that there is
some resistance (impedance) between certain pins (which of course is
not present when the monitor isn't connected).
But that would probably defeat the need or use for the mono/colour
switch, and also not allow for a setup to a TV such as yours with the
computer connected with both a VGA and a SCART cable.
I'll have to give this some more thought, but I think some sort of
"sensing" or "detection" circuitry is the solution, though I can't say
exactly how.

This was probably of more use in the 80s when many TVs didn't have any
sort of external input, so the only way to connect a home computer or
video game to it was via the antenna connector.
I can't think of any practical use an RF output would have today, so
maybe I'll just skip it for my output board.

Yup, that's probably more useful than an RF connector. Composite out
for situations where a TV doesn't have a SCART connector.
If it's not too complicated, perhaps even an S-video output. Should be
a tad better than composite video, but not as good as separated R, G,
B signals as in the SCART connector I've heard.

```

I'm working on recasing a Mega STe (placing its circuit board and all associated hardware inside a 19" rack enclosure) and have some questions when it comes to the cartridge port.

Since this will be more or less a dedicated "MIDI computer" in the end I will put great emphasis on the reliability of anything that goes in the cartridge port, and I (as well as many other Notator users) have experienced that the 40 pin cartridge connector is easily prone to bad connections and thus all sorts of software problems, so I will hard-wire them inside the 19" rack module instead.

As for which devices will be connected, here's a diagram:
http://notator.org/html/notator_faq.html#fully_expanded

And to further expand on that I will be adding a "Discovery" cartridge at the end of the chain (i.e. it'll plug into the Unitor-2). The Discovery has a "thru" cartridge connector which will allow for any additional cartridge based devices to be plugged in.
The idea is to remove the 40 pin connectors between all of these devices, then solder wires between them (probably using IDC flat-cabling). I haven't found any connectors which can go in place of the 2mm spaced pinout of the existing Atari cartridge connector, so they'll have to be soldered directly to each PCB.
Now, I believe the distance between each connection will be pretty short, and besides I've gotten hold of a cartridge port buffer circuit which I believe should "recondition" any weak signals. Not sure where I should plug in this board, but I assume it would have to be between the computer's existing cartridge port and the first cartridge device (the C-Lab/Emagic "Combiner" cartridge expander).

I have a couple of thoughts/questions:

1) Will the buffer board be able to handle all of this so that the signals will be satisfactory all the way through the cartridge chain? Would I need a second buffer at some stage?

2) How short do I need to keep the wires between each cartridge device?

3) Since I intend to place the "Combiner"'s 3 cartridge connectors on

the front panel of the 19" rack module I can see right away that the
Combiner's PCB is way too long. The PCB is almost 20cm long while the
PCB area concerning the 3 cartridge connectors is just around 7 or
8cm.
I could desolder the 3 cartridge connectors, create a small PCB for
just those 3 connectors, then use IDC flat-cables to connect that
small board to where the cartridge connectors originally were placed.
Is this doable, or can I risk problems? Would I need to have some sort
of buffer circuitry along the way? Perhaps a small buffer board which
the board with the 3 connectors should plug into perhaps?

Hallvard

<snip>

Hi Hallvard. I can't really help you with the buffer question, but just a
thought - you might check with the EtherNEC people - or docs, its got an
extension coming off the cartridge port. Maybe they can tell you some of

their experiences, whether or not that its a straight connection or they had to buffer it... (looks like a straight cable to me, at a glance, but I don't know whats in the case)

I meant the implementation of SCART is pretty non-standard. My TV has two,
but only one has RGB the other has composite. One has both in and out and
the other has only in. There are also differences in the way the SCART is
enabled. On my old CM8833 this does not do anything. On one on the TV it
enables the input... So whilst I have a selection of ST to SCART leads, none
of them work between all Ataris and all display devices with a SCART
socket....

.. So while there are plenty of them, they don't always do what they say on
the can...

Its a straight connection without buffers. On the one I built myself, I used
a short (about 15-20cm) section from an IDE cable to link the connector PCB
to the cartridge port. The PCB I have seems to work fine even though its
just plain copper.

I have some questions relating to the 13 pin DIN monitor connector of the ST (the connector which is soldered to the computers circuit-board that is):

1) Is it possible to find such a connector (PCB mounted female) with a built-in switch? In other words, when the monitor cable's connecter is inserted or removed the switch will be turned on or off.

2) Failing the above I need to figure out another way of "detecting" if an Atari monitor has been connected or not. Can someone please tell me more about pin 3 which is a bit of a mystery to me. Perhaps it can be used somehow for this.

Hallvard

I don't think so.

Pin 3 gets used for a variety of things. I wouldn;t count on it doing
anything...

Might be a bit on the expensive side, but Alex Yu at ATY Computers does work like that...

http://www.atycomputer.com/

aty@atycomputer.com

(510) 836-2309

Usually, you can e-mail him a description of what is wrong and he can give you an approximate cost estimate. He's done work for me in the past, and I've been very happy with it. Note: if he attempts a repair and can not fix it, he still charges for the attempt (but not as much).

Hope you get it working! :)

For IDE connections, ExtenDOS relies on a suitable SCSIDRV interface,
typically that provided by HDDRIVER. If HDDRIVER understands your IDE
interface, it should work fine, but I think that might be a big IF ...

Even if an IDE interface is incompatible with the standard Atari/Milan IDE interfaces there is still a way to get HDDRIVER or other software using the SCSI driver interface running with it: Writing the appropriate SCSI driver plugin for this interface. The SCSI driver specification is documented well; for an experienced programmer writing an IDE plugin would not be a big problem.
Designing an IDE interface compatible with the existing ones is probably easier, though :).

Haven't found one either despite my thorough googling.
I think I might be able to modify such a connector myself by cutting
off the top part and placing a micro-switch there. thereby detecting
when a male 13 pin plug is inserted.

> > 2) Failing the above I need to figure out another way of "detecting"

Perhaps pin 4 (mono detect) would be better for this?
Since this pin is forced to GND when an Atari mono monitor is
inserted, then this pin must have a logic high/low level, right?
If that's the case I could use that signal to trigger some logic
circuitry etc.

I'll probably have to work out a mixer/amp/level-matching circuit as well, because I intend to have a speaker inside the rack enclosure, and also line-out in addition to the existing (mono) audio line inside the 13 pin DIN and of course the stereo line-output in the SCART connector.

I've done some more thinking about my circuit and believe I've come up with an idea that will work with Atari monitors as well:
http://img204.imageshack.us/img204/9301/vgalogicpo4.png

The idea is as follows:
An electronic switch (U1) of some sort (a "multiplexer" IC?) works as a multiple 3 way switch. Those 3 are:
A: when an Atari mono monitor (SM-124 etc.) is present
B: when no Atari monitor is present
C: when an Atari colour monitor (SC-1224 etc.) is present

In positions A and C the manual colour/mono switch (S1) is bypassed so changing the modes will have no effect. In other words, whenever an Atari monitor is used it will work just like with an unmodified Atari ST.
In position B however the manual switch (S1) will be in control.

Control of the electronic switch (U1) for positions A and C is dependant on some logic (AND/OR gate ICs?), and to determine this a micro-switch is to be placed inside the 13 pin DIN (female) connector. This switch will sense whenever an Atari monitor's (male) connector is inserted. So now we have a system which "knows" when an Atari monitor (mono or colour) is present or not.

Next we need to determine if that Atari monitor is a colour or mono
monitor.
A mono monitor as we know has pin 4 (mono detect) connected to GND
(pin 13) internally, which the Atari colour monitor doesn't.
I assume this will generate a logic high/low (correct me if I'm wrong)
and can further be used to control the U1 logic switch circuit and set
it in position A or C.
Positions A and C will as mentioned above shut off the manual switch,
and also give sync signals only to those connectors (TV or VGA) which
correspond to the mode which the computer is currently in.

Finally, there's the LEDs.
If the pin 4/GND issue above works I would think that yet another
logic circuit can be used, only this time for controlling two LEDs.
One LED indication "colour mode" and another LED for indicating "mono
mode".

Any comments on this? Anyone have any practical and concrete
suggestions as to how I should get this done?

If he is not actively using tactics to avoid or sabotage killfiles
(posting from various systems, forging, massive crossposting to create
cross-newsgroup flame wars) then it should be quite easy to killfile
him.

It does seem that the frequency and the size of his posts are
approaching net abuse. However, IMHO, they aren't quite there yet. If
his postmaster were to act in this instance, it would raise troubling
censorship issues.

As Roger already mentioned you need driver software like ExtenDOS and a
suitable SCSI driver, like the one include in HDDRIVER.

That's good news indeed.
That's an SCSI drive you're using, isn't it?
What kind of SCSI host adapter are you using and what kind of Atari?

I'd like to hear from anyone who's gotten an IDE DVD-writer to work as
I'm hoping to connect one to my Mega STe some time.

Hi Hallvard. I've got a "Lite-On" IDE DVD burner working with my Falcon 030, (HDDriver and ExtenDOS Pro), but thats entirely different than the Mega STe I guess.

Why would it be very different from using an IDE DVD-burner with a
Mega STe? Does the burning process demand a lot of CPU power which a

regular ST/Mega STe can't deliver?

Oh, I was referring to the fact that the Falcon has an IDE interface
already, and the Mega STe doesn't. That's all. :)

Is this really a matter of speed? What I mean is that if the DVD burner
is not too old it should have some kind of burnproof mechanism, ensuring
that buffer overflows and low data transfer rates do not negatively
affect the result. Of course if the transfer rate is low burning a DVD
will need quite a lot of time, but technically it should be possible.

How about installing a DVD-writer (with burnproof technology), but
using it only to write to CDs (as surely that won't take forever and
that a CD-R is likely more than enough for backing up whatever is on
the hard drive), but having the ability to read DVDs as I use DVDs on
my Mac to store things on, and it would be nice to be able to read the
occasional file from those CDs on the Atari as well instead of having
to burn the file to a CD-R again, or transferring it to a floppy disk.

How well does a normal ST (or Mega STe) write to CD-R/W anyway?
For example, backing up a 540 MB hard drive to a single CD-R? Would it
take forever and put a lot of strain and be possible cause of burn
problems, or would it work fine?

Hallvard

Provided a burner with burnproof technology is used I would expect a
normal ST to be able to write CDs with 2x speed, which is about 300
KB/s. Backung up 540 MB would take half an hour.
Note that this calculation assumes that the ISO CD image is already
available. I do not know if such an image can be created on the fly.
Creating the image on the fly may need a lot of CPU time and thus
burning might only be possible with 1x speed.
Roger can surely comment on this.

Note that some newer CD/DVD burners have 4X as minimum speed - getting

600KB/s from disk to burner via ACSI might be marginal. Burnproof may help, however, it does not seem to be perfect: a friend did a stress test by burning an audio CD at high speed via USB 1.1 - this gives thousands of buffer underruns, and although the burner had burnproof, there were lots of audible problems when playing back the resulting CD.

It is possible - when CD burners first appeared and disk space was still much more expensive than now, I used

```
mkisofs | cdrecord -
```

a lot on Linux.

I would not expect much CPU load, because after the directory structures are written, all mkisofs has to do is read the files from disk and write the data to the ISO image (with appropriate padding to 2k blocksize).

cu

But in my case I'll be attaching 4 cartridge devices after each other
in this order:

1) C-Lab/Emagic Combiner (http://notator.org/html/
notator_faq.html#combiner)
2) Log-3 (http://notator.org/html/notator_faq.html#log_3)
3) Unitor-2 (http://notator.org/html/notator_faq.html#unitor)
4) Discovery cartridge (no photo. This cartridge allows for backing up
copy-protected floppy disks)

Here's an illustration I've made of the above (but without the
Discovery cartridge which connects after the Unitor):
http://notator.org/html/notator_faq.html#fully_expanded
I think I do need a buffer circuit along the way (or several) as the
instruction manual for the Log-3 says:

      "On account of the very high data transfer at the ROM port it is
not possible to operate the Log-3 with an extension cord (e.g. in a
rack)."

I don't have the user-manuals for the other hardware devices, but I
believe the situation is the same for them. To be on the safe side I
think I should buffer the cartridge port, but how, and where?
I will in effect be operating the Log-3 and other devices with an
```

"extension cord" actually, because the circuit boards will be removed from their enclosures, the boards attached by cables, soldered internally inside the 19" rack enclosure.

I already have one cartridge buffer circuit that I bought several years ago second hand, but I don't know who made them, or if it's a DIY project, where to get the schematics/PCB layout.

I also know about another cartridge port buffer; a project from the German C't magazine (9/1987, page 50) called "Kleine chips -gro=DFe wirkung" -SMD puffer f=FCr den ST-ROM port". I have a very bad copy of that article, but it's really useless for reading and making sense of. Finally I downloaded (several years ago -I have no idea where to find it now) a DIY project by Michael Kugelmann (the guy behind the "Doit" info archives I think). There's mention of C't and Elrad, but as it's in German and my German is less than satisfactory I can't say if the project is actually the same one as the C't project as I just mentioned, a modified version of it or a completely new, self-designed project by him, inspired by the C't article. I don't know which Elrad project he's referring to.

If there's any interest and anyone can help me figure it all out I could take some photos of my ready-built buffer board and upload them as well as the project by Kugelmann.

Hallvard

OK, just in case there is anyone reading this at all ..... ;-)
I've uploaded images of the cartridge-port buffer board I bought
several years ago second-hand. I'd be very pleased if someone could
identify it, telling me if it's a DIY project or a ready-built device:

The buffer board with the extension cable and daughter-board:
http://img169.imageshack.us/img169/4651/bufferalltu7.jpg

A closeup of the buffer-board:
http://img230.imageshack.us/img230/3481/buffermain1ma2.jpg

A second closeup, this time detailing all of the ICs:
http://img230.imageshack.us/img230/9817/buffericsgw4.jpg

The buffer board -view from underneath:

http://img377.imageshack.us/img377/663/bufferunderhj6.jpg

The daughter-board:
http://img54.imageshack.us/img54/3241/bufferdaughtermt9.jpg

Daughter-board, view from underneath:
http://img54.imageshack.us/img54/5/bufferdaughterunderxf9.jpg

Daughter-board, buffered Atari ST cartridge-connector:
http://img150.imageshack.us/img150/5494/bufferdaughtercartridgebi9.jpg

.... and here's the project for that cartridge-buffer project I found
somewhere, several years ago:
http://home.c2i.net/w-460389/atari/rombuff.zip

(I've taken the liberty to include converted GIF images of the original IMG images as I believe a lot of people here don't actually use their Ataris when going online and thus might not have any software that will read IMG files).

It's a cartridge buffer project by Michael Kugelmann (the same Kugelmann as the author of the "Doit" archives I presume) and the one I've uploaded is version 2.0 (I also have a version 1.0).

Any German speakers out there who can explain what it's all about? Is it a modified version of the C't cartridge buffer from 1987, or is it a completely different buffer designed by Kugelmann himself?

Can't tell you if its a DIY or commercial, but it looks pretty neat and clean to be a DIY project. :)

The only thing I've got to compare it too is my EtherNEC. The end that plugs into the cartridge port on the ST looks -similiar- but does not have the ICs.

Wish I could help you more. :(

AB>Has anyone made some experience in these fields?

I've got the IDE card reader from Reichelt in my Falcon. It's an ATAPI device, and IIRC my Falcon was able to boot from a SD card in that device.

I have a similar set-up on my Milan, it boots from a 512Mb CF-card. It wouldn't boot from the 64Mb CF-card I first tried though, so I suggest you try another CF-card.

Hi Ekkehard!

EF> I've got the IDE card reader from Reichelt in my Falcon. It's an ATAPI
EF> device, and IIRC my Falcon was able to boot from a SD card in that
EF> device.

Interesting. I just searched Reichelt but found only two IDE card readers
that don't match your description:

- Travla Reader: bootable, IDE-CF adapter, for travla cases
- IDE reader 6in1: not bootable, but hot swappable, multinorm

What's your card reader's labeling?

Regards,

Alexander

OK, I'll try to borrow CF-cards from friends, maybe I'll find a shop that
is customer friendly enough as well.

BTW: What brand/model are the CF cards you have tried?

Regards,

Alexander

I think I sent a previous comment on Ekkehards's posting by e-mail
instead of posting it to this newsgroup.
I doubt that Ekkehard's reader is an ATAPI device. Even though ATAPI and
IDE share the same connector the protocols are different. IDE hard disk
drives are not ATAPI devices but simply IDE devices, and the same most
likely applies to his reader, because it acts as an IDE hard disk drive.

Hallo Alexander!

AB>- IDE reader 6in1: not bootable, but hot swappable, multinorm
AB>
AB>What's your card reader's labeling?

Schould be the one quoted above.

From the order confirmation mail:

IDE READER 6IN1 Multislot Kartenleser IDE   2   59.80 Euro

On the Milan, HDDRUTIL reports the following:
  02.00: GENERIC IDE CARD READER 9350 Direct Access
  "SCSI-Level: ATAPI"

On the Falcon, the device is connected via ACARD SCSIDE adaptor to SCSI bus.

That's interesting. (See my previous comments on IDE/ATAPI). Are media changes correctly reported with this reader, i.e. does the Atari correctly handle changing the CF card?

Hi Ekkehard!

EF> Schould be the one quoted above.

Funny that you can boot from it while it is specified as "not bootable"
;-)

EF> IDE READER 6IN1 Multislot Kartenleser IDE   2   59.80 Euro

Too bad, currently it's not available.

And it's quiet big - the target system is my STBook where the CF+adapter
should replace the damaged internal hard disc.

EF> On the Falcon, the device is connected via ACARD SCSIDE adaptor to SCSI bus.

So you already have two IDE devices installed in your Falcon?

Regards,

Alexander

"Not bootable" most likely refers to a boot mechanism not relevant for the Atari. As long as TOS can read single sectors from a drive, in order to bootstrap the actual hard disk driver, the drive is automatically bootable.

A word of warning to Falcon owners. Atari used a Dallas clock chip with an integrated battery in the Falcon. The chip is a 24-pin dual inline package device and is difficult to remove due to the tin leads and large ground plane. The battery is molded in the package and battery leads are not accessable. These chips have about a 10-12 year maximum life span.

Just trying to get the word out about this to the community.

Regards,
Glenn

This is old news, and not a severe fault. The chip will only loose time
and date or NVRAM contents. Cyclone / X-Troll was working on a small
utility that will restore NVRAM contents on boot time with an AUTO
folder utility.
Nothing to worry about if you ask me :)

And those who feel adventurous can replace the battery (or the whole chip)

cheers,
Matthias

Hi Matthias

Where can this NVRAM utility be found?

regards
Maurice

I'll meet and ask Cyclone during Paracon 8 Party this weekend.
AFAIK it is not openly available yet but I'm sure there will be some
interest!

cheers,
Matthias

Hallo Alexander!

AB>And it's quiet big - the target system is my STBook where the
AB>CF+adapter should replace the damaged internal hard disc.

Ah okay. Well, It's normal 3,5" floppy drive size, so no problem at all for me as both my Milan and Falcon are located in big tower cases :-)

AB>So you already have two IDE devices installed in your Falcon?

No. I've got a damaged IDE port in that Falcon. I once inserted the IDE cable in a wrong position, which caused a short ciruit in the power lines within the mainboard.

Hi Uwe!

US> "Not bootable" most likely refers to a boot mechanism not relevant for
US> the Atari.

I agree, still it's funny - and kind of typical for us Atari users that rules from the PC world don't apply.

US> As long as TOS can read single sectors from a drive, in order to
US> bootstrap the actual hard disk driver, the drive is automatically
US> bootable.

That's why I hope that CF cards from manufacturers other than SanDisc will be recognised by TOS - I'll test a couple of manufacturers this weekend.

Regards,

Alexander

True enough. However, this isn't that hard to fix WITHOUT removing the chip.

The Dallas clock chip is shaped like a rectangle, much like a 2 x 4 square LEGO brick:

```
0000
0000
```

If you take a cutting wheel (Dremel) tool and grind down the top half of the center portion away from the keyboard you will eventually uncover the battery and the battery tabs:

```
.  | Grind here
.  v
0    0
0000
```

Note that some chips have a soft rubbery filling that is easily removed. Mine had hard plastic throughout, so the cutting made a lot of plastic dust, but that was easily blown from the motherboard. I know that this sounds scary, but as long as you go slowly you should be O.K.. There is a crystal on the left (by the dot on top of the chip) that you don't want to damage, so keep your cutting to the center of the chip away from the keyboard.

Both the battery and its tabs are silver, which stand out strongly against the black plastic. The layout kind of resembles Mickey Mouse with the circular battery "head" and the "ear" tabs at roughly 10:00 and 2:00 positions. The left tab is positive, and you need to cut it away from the battery without destroying it in order to disconnect the old battery. Again, a Dremel cutting wheel works nicely.

Now solder about 10 cm of wire to each of the two tabs. These are reasonably large tabs and even a novice should be able to heat a wire, melt some solder onto the wire, and touch the hot wire onto the tab so that it sticks. (I know this isn't good soldering practice, but my point is that you can do this if you can figure out which end of the solder iron is the hot one!). Attach the other end of the wires to a battery holder, preferably to a coin cell holder. These are a bit hard to find, but a electronics shop should have one.

Place your 3V (preferably lithium) battery (size really doesn't matter, but the CR2032 is easy to find) into the battery holder and check that everything now works. Don't forget to insert the battery in the proper direction. (Remember, the left connection on the chip is for +.)

Finally, figure out where the battery holder will sit. The Falcon doesn't have much space available in the front, which is why your wires needed to be so long. Don't place the holder on a chip as that may lead to overheating problems. It may well be useful to wrap the battery and holder in tape so that it can't short out the motherboard. Personally, I removed my Falcon's fan (which only cools the RAM -- it's not needed with my RAM upgrade) and attached the battery holder to the fan mount.

Replace the battery every 5 - 10 years.

Galen

Hi Ekkehard!

EF> Well, It's normal 3,5" floppy drive size,

Didn't get that from the small picture, thought it was 5,25"... I'll keep
it in mind for the next Atari to be reconditioned...

EF> I've got a damaged IDE port in that Falcon. I once inserted the IDE
EF> cable in a wrong position, which caused a short ciruit in the power
EF> lines within the mainboard.

Ouch... You think some copper lines in the pcb are burnt? Or parts of the
logic chips? The first might be repaired easily...

Regards,

Alexander

Hallo Alexander!

AB>Ouch... You think some copper lines in the pcb are burnt? Or parts of
AB>the logic chips? The first might be repaired easily...

I definetely know that some lines in the middle layers of the mainboard are burnt. There's a large black spot there. The Falcon has been sent to Rodolphe for CT2 installation afterwards, and even he wasn't able to get the IDE port to work.

mit freundlichem Gru� aus Bubenreuth

Hi TomTom

Its actually very easy to remove the chip and just as easy to pop the top off and miggy back a coin cell into a coin cell holder

That sounds like good advice for the Dallas DS12887 chip, but I think most stock Falcons (at least those from Atari) came with the ST MK48T87B RTC chip, for which the DS12887 is a pin-compatible replacement. As another poster has said, it is fairly easy to pop the plastic top off of the MK48T87B
and solder in a new battery, as suggested below; there's a photo on Didier Mequignon's CT60 page showing that done on a CT60 mobo (different board, same problem and same chip) here:

http://perso.orange.fr/didierm/ct60/index-e.htm

Hiya,

This utility is due to release with the next issue of the Alive disk magazine (http://alive.atari.org/) Same goes for a clock patch that will

disable the annoying reset of clock and date when you go back to the
desktop on a F030 with dead battery.

cheers,
Matthias

Hi Ekkehard!

EF> The Falcon has been sent to Rodolphe for CT2 installation afterwards,
EF> and even he wasn't able to get the IDE port to work.

If Rodolphe can't do anything... But at least you've tried all that was
possible.

Regards,

Alexander

Hi there again!

(Just as reminder:)

AB> My setup:
AB>
AB> - Atari Falcon
AB> - IDE44<->CF-Slot (pure wiring) adapter
AB> - SanDisk 128 MB Compact Flash Card
AB>
AB> HDDriver 8.1 installed successfully, as on any hard disc before. The "card
AB> disc" is fully functional.

Now I've done some additional tests with some (borrowed) CF-Cards (tested
in exchange with my SanDisk 128MB).

Here a short overview about HDDRUTIL's ID check output:

(Everything listed below "Bus 2 Atari IDE"):

- my SanDisk 128MB

```
     00.00  p.p.p.p.p.p.p.p.p.p.p.p.p.p.  Direct Access  // often
     01.00  SanDisk SDCFH-128        Vdg  Direct Access
     -> device 00.00 vanishes after bus rescan
```

- borrowed Medion 128MB

```
     00.00  p_p_p_p_p_p_p_p_p_p_p_p_p_p_  Direct Access  // often
     01.00  CF-ATA                   1.1  Direct Access
     -> device 00.00 vanishes after bus rescan
```

```
        (*under*scores should be *over*scores!)

- borrowed Hama 128MB
     // no 00.00 shown
     01.00  1                      2N2-  Direct Access

- borrowed Canon FC 32M
     // no 00.00 shown
     01.00  SanDisk SDCFB-32        Vdg  Direct Access

- borrowed Kingmax 8 MB
     00.00   _ _ _ _ _ _ _ _ _ _ _ _ _ _ _  Direct Access  // often
     01.00  KCF008MP               Ver.  Direct Access
     -> device 00.00 vanishes after bus rescan
     -> device 00.00 reoccurs after reboot
        (*under*scores should be *over*scores)
```

I think the strange device 00.00 might be the reason for the Falcon not to boot from the CF cards. No idea why it is listed, the CF card plugged into the adapter is the only device on the IDE bus. And it always is recognised as device 01.00 - no matter if the adapter is jumpered as "master" or as "slave".

From what I remember TOS does scan hard disc devices on busses in this way:
It starts with device 0, checks if there is a corresponding hard disc and breaks if not. Is the hard disc bootable it boots from it, otherwise it checks the next device.

If this is true the above mentioned device 00.00 would instantly break the "boot from hard disc" routine of TOS, right?

So my job was to

- make the CF card device 00.00

or

- modify TOS to start with device 01.00

right?

Regards,

Alexander

The master should be 00.00, the slave 01.00. In your case this does not
seem to be the case. My guess is that something is wrong with the CF
adapter or the cable.

Hi Uwe!

US> The master should be 00.00, the slave 01.00. In your case this does
US> not seem to be the case.

ACK.

US> My guess is that something is wrong with the CF adapter or the cable.

That was a good hint. I did some research about IDE 44 interface pinout and Master/Slave stuff, then I checked the adapter's wiring...

Result:
My adapter's "Master/Slave"-jumper is a "CableSelect/nothing"-jumper!

I guess that "CableSelect" is not available (in the intended way) within Atari Falcon computers, so that something messy happens.

From what I read a "Master" device has CableSelect connected to GND while a "Slave" device has it left unconnected (thus the "xxx/nothing"-jumper is half way right).

So my next test will be to connect the jumper to GND - I'll give a report then!

Regards,

Alexander

--SNIP--

Does this strange 00.00 entry appear every time you try to access the card after a cold reboot, or only the first time the card is used? In other words, is it perhaps something that is written to the card in manufacture?

Regards, /Peter/

For some cards a device 00.00 appeared only after cold boot, for others it reappeared after warm boot from time to time as well.

> In other words, is it perhaps something that is written to the card in
> manufacture?

Probably not. But see my parallel posting...

Hi there!

If anyone using IDE-CF-card-adaptors should ever see "ghost" devices 00.00 while the CF-card is recognised as device 01.00 then it is probably a CableSelect issue:

AB> My adapter's "Master/Slave"-jumper is a "CableSelect/nothing"-jumper!

And Atari computers do not provide a CableSelect.

AB> So my next test will be to connect the jumper to GND - I'll give a
AB> report then!

I've done this test now: The CF-card now is recognised as device 00.00 and there is no "ghost" device 01.00 ;-)

And the very helpful effect of this is that my Falcon now boots from the
CF-card!

Thanks to all the helpful people in this group!

Regards,

Alexander

Good to know that. I will add a note on the cable select issue to the
HDDRIVER manual.

Very easy?  That is not what I hear (unless you are very good with a
soldering iron)

I know for me to remove a socket involves cutting off each leg and just
unsoldering the pins out.  I am not very good and soldering but this does
the trick...

Steve mentioned two ways to fix this problem - the second one doesn't
even need you to take the motherboard out of the case??

I noticed the special "off format" VMR port in my Mega STe. It looks
like a pseudo thick PCI port - but it is something else.
I have heard that it can be used for a Graphics Adaptor which performs
way better than the, allegedly speaking, rather measly 600*400 pixels,
which can be achieved by STe itself.
It would be a dream come true to run Emagic Logic in something like
768*1024. Is it possible?
Which graphics cards can do the trick?
Are they available?

Sincerely
Peter Hjorth Feddersen / Denmark

There are several cards available, although I'm not sure any are available commercially now (I tend to doubt it). Your best bet would probably be to watch e-bay, where I've seen several come up in the last year...

Good luck.

This is an expansion slot that is almost a replication of the complete
CPU bus (just a couple of signals left out). Theoretically, it can be
used to fit memory expansions, floating-point units, graphic cards, etc.
but, AFAIK, there were few items produced for it. E.g. there was once
```

a FPU add-on (by Atari?) named SFP004. I have a functionally equivalent
home-made FPU board plugged into that slot, and also had a nome-made
8MB Alt-RAM memory expansion there that was eventually removed because of
cooling problems.

I just received a Mega STE. The 1.44 Floppy drive is not working. I have
been searching for one. And I understand that its a Epson Smd-340. I have
searched for this on ebay and came up with a large list. But I am not sure
if any of then will work beause they all have differnt numbers after the
340. Anyone know where I can get one or if you look on ebay will any of
those work. Also it needs a keyboard. Anyone know where I can get one?

I'm considering building an Eiffel board, which I understand is a GPL
(General public license), and I've been looking for information enough
to make one myself.

Unfortunately the Eiffel site (http://eiffel.atari.org/) comes up with
nothing, and none of the other sites that show up after a Google search
contain the PCB layout (so I can make my own PCB). Where can I find
all the files needed to make one of these?

I'm also wondering if it can be used with a Mega STe, and if there is a
socket on the board that will allow for a standard Atari ST mouse as
well as a PS/2 mouse?

Hallvard

Try:-

http://perso.orange.fr/didierm/eiffel-e.htm

I think the .lha files contain .img files with the layouts but I can't view
them easily on this PC.

From the same site mentioned by David, I came across this schematic, don't
know if that is what you're looking for or not:

Already tried it a few days ago, but although it contains a schematic
it doesn't contain the actual PCB layout, which means a lot of extra
work.
Is the author still around, and able to get in touch with via email?
I'm sure a circuit design program has been used, so such a file is
available.

Bummer :-(
I was hoping for a completely flexible solution where I could use an
Atari mouse or PC mouse (not both at once of course!).
Perhaps someone here knows of a modification which will allow for this?

Regards,
Hallvard

I have an un-tested one. Do you have a good e-mail address. If so pop it to
the address on here..

Hello Tom Tom!

> Do you know by chance if the format of the drive is the same as the
> regular ST or if it is the same as the TT/Falcon?

The "format" of the ST-Book-Drive is a 2,5"-drive as used in
notebooks/laptops.

> Since the drive is IDE, can any drive be used in it or does it require
> certain models?

If I remember corectly these machines had problems with drives bigger
1GB capacity, so if you find somewhere a 500MB-drive it should be
possible to install.

> What means will the drive need to be formatted and with what software is
> recommended?

Is there a "format-software" (AHDI sp?) in ST-Books permanent RAM-Drive
(I don't remember...)
Otherwise the best chance is to take a FALCON (only other Atari-machine
with a 2,5"-drive"), put the "new" ST-Book-drive in it, format with the
software from the "language-disk" or third-party-software as "HDDriver",
and put this drive then in the ST-Book.
Voil� - Should work...

Best Regards, Werner

General problems with IDE drives bigger than 1 GB are unlikely because
there is no IDE-specific limit at this size. Provided the ST-Book has a
standard IDE interface, which I think it has, there are no limits that
do not also apply for other Atari machines.

A device called "scandoubler" is your way to go.
If you have a PC then a TV tuner card is cheaper.
I personally bought an LCD monitor with scart/rgb input. (actually it
is a 17 inch TV also, because the built in TV tuner)

Drawback, of course, is that you must have the PC switched on at the same time :-)

I use a scan doubler for a PlayStation to an LCD monitor, and it works tolerably well. Has the advantage of a changeover switch, PC or PSX/whatever.

Any sources in the Uk at a reason able cost. All this I have seen are $150.
Might as well by an LCD TV at that price...

Could you tell us what model it is?
Is the picture as good as on old monitors?

Thanks!
Simon

I'll check the specific model if I am at home. It is a Samsung
something. Since it is an LCD it is more sensitive to the quality of
the signal. If you have a good scart cable then the picture will be
good.

If you can find a monitor that can sync to 15KHz (horizontal) and
50Hz (vertical) everything should be ok, with a connector adapter.

Such monitors are most likely to be quite old or quite expensive, though.

Argh. I was following this thread. The bad news is it won't work with the
Falcon. (which is what I was looking at).

The horizontal freq., according to the specs, only does 30, and it needs
to be 15 for RGB... :(

I have 2 IDE discs in the Milan. At the moment one is just a copy of the other plus osme extra stuff.

I noticed a few days ago that the first partition on it (H:) doesn't open. I get a TOS-34 error.

I tried to fix it with Edge (doesn't recognize the boot sector) and with dosfsck

```
>dosfsck h:
dosfsck 2.10, 22 Sep 2003, FAT32, LFN
Logical sector size is zero.
>
```

I do't really want to have to wipe the partition or worse, wipe the disc so how can I fix it.

It's a pity that Edge can't do anything.

Peter

I assume this is a standard FAT16 partition. I also assume that all other partitions on the same physical disk are accessible OK.

If so, you should be able to use Edge's Partition function and 'install new boot sector' to make the partition accessible again. Of course, there might be other things clobbered in the partition (or the disk as a whole), but that should get you further.

Roger Burrows

Hi Roger,

It was set-up as a boot partition for when I eventually switch to using
it as the main HD. It's a Big GEM (BGM) partition according to HD-Driver.

Yes, that's misleading, but believe me, it works. I tried it with my
falcon. 30 KHz is for the VGA. RGB input accepts 15 KHz. One drawback
with falcon is that it doesn't support VGA@100Hz.

Perhaps I'm misunderstanding then.

You're saying that you can hook it up to the Falcon, and it will do both
VGA and RGB, with no problems?

Like my (much older) NEC 3D multisync?

I've got a Multisync adaptor hooked up to it - I can use my VGA desktop,
and still run RGB stuff like games and demos.

Thanks for the info.

Ron you keep popping up and telling me the same thing. LOL I am tying to
find others using the software and what drives they are using.

Not exactly the same as multisync monitors. You can use its VGA
connector for VGA and the RGB connector for RGB (only the RGB input can
go down as 15 kHz). I myself built a video adapter for the Falcon with
a switch capable switching between VGA and RGB. You must restart your
falcon if you want to change from one to another but it is still ONE
monitor on the desk. If you have some electronic skills, you can build
a device which can change its output "on-the-fly".

If you switch it then change resolution you do not need to reboot.
Doesn't always work but give it a try and see.

Er, apologies - just posting what I consider to be one of the best sources
for info and software, when it comes to CD *anything* on the Atari. :)

I'll slink back into the woodwork now... :D

Ah, okay - I'm catching on now. Thanks for the information.

I guess I'll still keep looking for a LCD monitor/TV that does sync down
to 15khz on the VGA connector, and doesn't cost an arm and a leg. :)

Thanks again.

Hallo Uwe, :)

> General problems with IDE drives bigger than 1 GB are unlikely because =

> there is no IDE-specific limit at this size.

Wasn't there a Atari-specific problem with drives (or partitions) bigger =

1GB? They could't adress such big storage-devices IIRC.

There is a TOS specific limitation regarding partition size. Early STs had a limit of 256 MB per partition. Most other TOS versions have a limit of 512 MB per partition, except for the Falcon (4.0x) TOS which can access 1 GB per partition. MiNT (a multitasking TOS replacement) can go to the TB range. With 14 partitions possible, your ST Book can access 7 GB total via its built-in operating system.

Having recently taken my Mega STe out of the closet and dusted it off, having regained an interest for it, I can't help but wonder what has

evolved hardware-wise the past years.
I seem to remember several small companies and individuals making
hardware small bits and pieces, but can't remember their names.
What I would like to see for my Mega STe is the following:

a) memory beyond 4 Mbytes RAM
b) an IDE interface so I can add an IDE hard drive
c) a PC keyboard/mouse interface
d) a PC monitor (LCD?) interface

That's all I can think of at the moment, but other interesting hardware
bits could always interest me :-)
Please update me what's been going on for the past 5-6 years.

I know of two solutions:
- Martin Wevelsiep's ST memory expansion. Difficult to fit (requires lots of soldering).
- Magnum STE. Plugs into the CPU socket, provides alternate RAM (small auto folder tool and TOS 2.06 required to activate RAM).

Both are not manufactured anymore - you might be able to pick up a used
Magnum STE.

>d) a PC monitor (LCD?) interface

If you do not need the colour modes: ST-high works on almost any VGA PC monitor with a simple, passive adapter cable.

Since then nobody has hacked their own memory upgrades?

What about an IDE interface for the Mega STE? Anything like that available ready made, or as a "kit" which someone has made?

Good!

> a) memory beyond 4 Mbytes RAM
> b) an IDE interface so I can add an IDE hard drive

Several attempts have been made, but no one is currently marketing these. However, STLabs is doing some interesting work. See http://stlabs.free.fr/ . You could also make your own IDE interface. (http://www.joogn.de/atari_ide.html).

> c) a PC keyboard/mouse interface

Eiffel works nicely and can be ordered from Pawel Kaznowski or Rory McMahon (search this group for email addresses). There is also the PeST if you just want a PS/2 mouse.

> d) a PC monitor (LCD?) interface

This is simply done with a scandoubler -> video in (ST Low/Med), or a simple VGA adapter cable (ST High). Higher resolutions are possible with video cards, but these were never inexpensive and are often troubleprone.

> That's all I can think of at the moment, but other interesting hardware
> bits could always interest me :-)
> Please update me what's been going on for the past 5-6 years.

Lately (as in the last couple of years), the ST scene has had:
-- a very fast Falcon upgrade (CT60)
-- a PC keyboard/mouse interface (Eiffel)
-- a PC mouse interface (PeST)
-- an Ethernet interface (EtherNEC)
-- solid improvements to MiNT, the multitasking successor to TOS
-- solid improvements to Atari emulation (STeem, etc.)
-- a "virtual machine" for modern hardware (Aranym)

What is currently in the works (although at a glacial pace) is:
-- an Ethernet/USB interface (NETUSBee)
-- an Ethernet/USB interface for the CT60 Falcon upgrade (EtherNAT)
-- a PCI adapter for the CT60 Falcon upgrade (CTPCI)
-- a new graphics card for the CT60 Falcon upgrade (SuperVidel)

There are also several people working on creating new Atari-compatible hardware, although their success has been rather limited.

Galen

I know of no commercial available upgrade since then - the Mangum series was discontinued due to lacking demand, so I doubt anyone else made an attempt to sell a commercial product after that point.

Thinking about it, before the Magnum, there was also a board from Marpet (?) that plugged into the MegaST slot and provided alternate RAM.

You might find DIY projects for memory expansion, although I do not know any - which does no preclude their existence, I have not actively searched for any.

Hi,

I have one of the above cards but am suspicious of some of the RAM on it, (one of the SIMMs seems to have shed a chip). Are there any

manuals for this card flaoting about there in internetland ? I would
like to reconfigure the card to allow me to remove the suspect SIMM and
check it is happy before I seek out 64MB's worth of RAM... (and I would
also like more than the 4MB thats in there already :)

Thanks in advance

Graeme (aka LinkoVitch)

Hi, I am an Atari ST game collector, and gamer, and I was lucky enough to get my hands on a mint condition Hard N Heavy (sequel to Giana Sisters) original disk box and manual. Unfortunately, somebody copied some crappy midi files on to the original disk. :(However the disk is in good condition still, and I happen to also have an original Hard N Heavy disk from a re-line compilation. :) (which should have the identical code and format)

My question is: is the copy protection tough on Hard N Heavy, or might it be possible for me to restore the erased original Hard N Heavy disk with my other Hard N Heavy original disk?

Would I need special copy software? Perhaps a discovery cart (is that what they were called?)

Thanks in advance for any info! -SaTcom2

Use a PARCP cable.  Certainly one of the most reliable and predictable
methods.  Search for PARCP.

Hi,

> Can someone explain how to go about how to port over ST files into a
> format that's readable on a PC?

What is exactly what you want?

Do you want ro read files from floppys which are formated on a Atari ST? If yes, go to my homepage http://www.mbernstein.de to the download section (floppy icon) and then to the Atari section. There is a program st2dos which can modify your floppys without data loss in a way, that a pc can read them. Note that any executabke boot sector is not more executable after this modification. Higher formats can not be converted.

Do you want to convert file formats of atari programs to file formats which can be read by software from pcs? I yes, please specify, which format you want to read.

Do you want to build .ST images from your Atari ST floppys? Then you can find software with google which can save images as .ST and .MSA

I hope, my hints are helpfull.

Regards

```
Michael

The Milan has two IDE busses?  I don't know much about the Milan, but
I'd try just a single HD (no CD) until I got that to work.  Then I'd go
about adding things.

Hi there!

Has anyone done this successfully?

My setup:

- Atari Falcon
- IDE44<->CF-Slot (pure wiring) adapter
- SanDisk 128 MB Compact Flash Card

HDDriver 8.1 installed successfully, as on any hard disc before. The "card disc" is fully functional.

BUT: I am not able to boot from the card disc, have to load HDDriver from floppy though it is installed on card disc drive "C".

I guess there is something with the TOS boot routines that makes them unable to recognise the card disc.

Maybe I should try another CF-Card brand?

Or do I have to patch the TOS boot routines?

Has anyone made some experience in these fields?

Best regards,

Alexander

Indeed, the on-line calculator for my programmable oscillator failed to find an accurate ratio.

Good point. Puzzles me too.

>>So it seems that Atari used the rounded off value of 14.31818 MHz.

Yes, there is a factor of 1.001 involved, but

32 / 1.001 = 31.968031 and
32.215905 / 32 = 1.00674703125.

I've managed to get a machine running off an 14.318.. MHz crystal for the main memory cycles with another crystal for the PAL carrier. It is no problem, the modulator chip restarts the colour carrier oscillator after every HSYNC.

I think what Atari did was to have the PAL oscillator nudging the master clock oscillator into sync, which sounds a bit iffy to me. I think the right thing would have been to have HSYNC kicking the PAL oscillator, like modulator chips do. That way the master clock doesn't need any special relation to the colour carrier.

>> No. If you ask for an 8 MHz crystal, you will get one.
> Have to disagree there. Temperature, over or under voltage, variations in
> crystal composition, ancillary components.

Yes, actual frequency will vary from what it says on the tin.

> 8 MHz does not mean 8 MHz.

It does mean that is the frequency the manufacturer is trying to provide,
and is the one you get give or take the variation due to the conditions you
mentioned quoted on the data sheet.

Mind you, they usually round off markings for values with many digits. The
NTSC carrier value is 315/88 which gives endless recurring digits. The PAL
carrier is 8 digits. Crystals are steady enough but seldom spot-on, and
colour carrier oscillators have to be more accurate so they have trimmer
caps to fine tune the crystal.

> the higher the frequency, the more unstable it is.
> Multiple harmonics there too.

Agreed but 8 MHz is reasonably low, and 32 MHz is not too high.

> Maybe the 8.010613 was a bodged batch of a few million crystals that were
> going cheap at the time.

Possible, but I don't think it is likely. Atari were big, and wouldn't have
to make do with out of spec components.

> I think it was Sinclair that bought a
> few million dud chips on the cheap.

He appreciated the fact that things could be less than perfect but still
useful.
Early on he sold under-spec transistors to hobbyists who didn't need
perfection.
Later on he bought 64Kx1 DRAM chips with memory defects confined to one half
of the memory array, and used them as perfectly adequate 32Kx1 chips.
Certainly beat using two perfect 16Kx1 chips that needed extra power rails.

> Sorry to say this OP, but if you know so much about the subject and are so
> worldly clever and infinite

I am reasonably acquainted with electronic video systems but not infinitely

so.
The reason for the Atari crystal frequencies isn't obvious to me, hence I'm asking.

> then why on earth are you on here asking these
> questions to us mere mortals.

Because it is a crystal in an Atari STE, and this is a group of Atari ST users.

> Apologies for not meeting your expectations, and if you don't like the
> replies you're getting then what on earth ever possessed you to post on
> Usenet in the first place?

Sorry for being read as brusque. I read the responses and explained why some suggestions could not be or probably were not the case.
If I write "No." that doesn't mean "No, duh!", it means "No, I haven't found that so in my experience but of course being human I may be wrong".

> Maybe post these questions on the sci.electronics groups and take the same
> approach, for on here we're quite tame.

I was thinking of doing so but for now I think I can proceed with 32 MHz (not Atari variant) crystal timing without problems. Video output will be RGB to TV or monitor so colour carriers won't be needed. If they ever are, it won't be hard to retrofit.

Weren't you a ZX81 owner? I didn't know you were into STs as well.

Hm - not sure, but I think this might destroy the phase relationship between
adjacent lines that is required by PAL. It should work for NTSC, though.

>I think what Atari did was to have the PAL oscillator nudging the master

It is just a PLL (although with a high divider ratio). The scheme has the
benefit of keeping the PAL oscillator running, which avoids phase shifts
between lines.

It really is okay, signal transmitters send a burst of pure colour carrier soon after HSYNC so that the receiver has a reference to work with. It doesn't matter if the phase of the reference varies every line, only the phase encoding w.r.t. that reference alternates every line.

It doesn't look like a proper Phase Locked Loop, in that there is no phase detector, divider or VCO. Instead, the PAL oscillator signal seems to nudge the master oscillator. It might have a similar result as a PLL, but I don't think it is one.

AFAIK, analog PAL receivers delay the color information by 63.943us (1 line minus 180 degrees) and add/subtract that with the current line to cancel out phase shifts - that would cause problems with shifting reference bursts.

>It doesn't look like a proper Phase Locked Loop, in that there is no phase

Hm - I just had a look at the schematics. I could not find the PAL version of the MST schematic, but in the MSTE schematic (page 2, "stuffed in PAL systems only"):

It seems that the 4.433MHz clock and HSYNC run into a phase comparator (U203B, 74LS74), the output is low-pass filtered (R208, C212), and that voltage is used to control the frequency of the 32.xxxMHz VCXO (cap diodes D202, D203, ... Q202) - this definitely looks like a PLL to me, although I might be wrong, I am more into digital design. The divider is buried inside the ST chip set, since the HSYNC signal is basically the 32.xxxMHz system clock divided down by some large number, closing the loop.

You're probably right, I'm rather rusty on analogue that I don't use often. I recall a similar trick being used for a frame grabber where a 6845 generated the pixel addresses and a VCO was synced to the source video via HSYNC.

I also have a poor scan of the circuit, it is a bit hard to read the details clearly.

How can I repair a boot sector on my HD? I have Diamond Edge and HDdriver 8
utils but can't fathom a way of putting things right. Any help would be
appreciated.

As far as HDDRUTIL is concerned it can repair a root sector (this is
explained in the manual), but not a boot sector.

No, it wouldn't. If a boot sector is corrupted the corresponding
partition cannot be accessed anymore. Re-installing the hard driver does
not change anything. (If the boot partition is affected you cannot even
re-install the driver since the partition is missing.)
The actual boot sector data have to be restored by special tools, like
DISKUS (http://www.seimet.de/diskus_english.html, German version only).

Is there anyone out there who has gotten a network connection over the
lantronix UDS 10 with the pc? Or able to connect to the internet. I was
thinking I could upload files to a ftp server from my st but How do I get it
to connect with the Lantronx box. Anyone?

Hey Sniperstorm.

Hmm, have you tried any software yet? I believe that once, during testing,
I used a small program called ST Telnet (IIRC) to hook up to a few BBS's
with my Mega ST.

The concept should be the same for an ftp session. I'm assuming here that
ST Telnet supports the usual commands like "put" and "get".

I have used a Lantronix MSS1 to make network connections with an ST or Falcon ... but that is a little easier than what you want to do, since the MSS1 looks more like a terminal server over the serial port than a UDS-10 does. What you need to connect the ST to the Lantronix box is a modem cable between the ST and the serial port of the Lantronix box and a terminal emulator program for your ST ... if you really have an ST (so that the serial port speed is limited to 19200 baud by hardware) and you can use ST High video mode (640x400 mono), probably your best bet for a terminal emulator is Uniterm; that is what I used on my ST. On the Falcon I used the ConNect 97 terminal emulator, as it supports the higher serial port rates available on the Falcon (but the latest stable version of ConNect 97 was only released in German, I think).

Anyway, once you have the cable connected and the terminal emulation

software running, you can connect to the UDS box over the serial port and configure its network parameters as described in the Lantronix manual; you can then use the UDS Modem Mode to make a manual telnet connection (to port 23) to some host on your local network that can accept telnet connections. (It will probably have to be a host on your local network, since it's not likely that you will find many hosts connected to the internet
with open telnet ports nowadays, for network security reasons). Once you have a telnet connection to some host over the network, you can use the built-in file transfer options in your terminal software, assuming that you have software on the network host that understands the same file-transfer protocol; for example, I have used the built-in Kermit file-transfer support in Uniterm on an ST to transfer files to and from a VMS system over a network link created with my MSS1, using C-Kermit to handle the file transfer on the VMS end. If you can use Uniterm on the ST, Kermit is probably the file transfer method that is most likely to work, as the Kermit software is available for a large variety of systems and is thus the software
you are most likely to find (or be able to install) on your network host. If
you are trying to set up file transfer to a PC that you control, Kermit 95 includes the option to install it as a service, which allows you to accept telnet connections on the PC directly to a Kermit service.

In any case, the basic procedure is to use some terminal-emulation software on your ST to communicate with the serial port on your UDS-10; once you can do that, you are limited to network clients supplied by the UDS-10, and from a quick glance at the user's manual, that appears to limit you to telnet,
since the UDS-10 doesn't support FTP. That in turn means that for file transfer, you are limited to file transfer protocols (old serial-line transfer
protocols, such as Xmodem, Zmodem or Kermit) that are supported by your terminal emulator and for which you can find corresponding software on a network host you can reach, which will probably be limited to hosts on your local network.

Unfortunately, the UDS-10 doesn't provide you with a network stack (it doesn't support SLIP over the serial port), so even if you have FTP client software on your ST, you won't be able to use the UDS-10 to make a FTP connection with it ... and I don't know of any ST terminal emulator that supports FTP as a file-transfer protocol, so I think you'll end up having to use Kermit or Zmodem to transfer files to some host on your local network; but with luck you'll have an FTP client on that host with which you can then transfer the file wherever you want to send it in a second step.

Hope it helps,
Bill

Of course you need a good backup of the boot (on some external medium
such as a floppy), then you should be able to restore.  For further
help, you could try emailing the current author of Diamond Edge (me
:-)).  Check my web site (www.anodynesoftware.com) for email addresses.

Did the ST have an RTC for time-stamping files, and if so where was it located?

My mate's ST had an RTC in the ASCI-to-SCSI adapter board, but that would be no use for FD based systems.

I heard the ST had an RTC in the keyboard, but I never heard of anyone replacing the battery there. Maybe it had a NiCd cell in there?

KH.

AFAIK the Mega ST was first to have a battery backed clock, from Atari.

Hmm, okay, could you do me a favor? Providing you can remember of course...

Can you post here explicit instructions on how to setup HSModem for the RSVE mod?

Because, since I got my Mega ST working again, then that means the MFP chip is okay, and I didn't damage it. So I had the RSVE mod hooked up right, the MFP chip was okay, but it still didn't work. The red LED on the RSVE unit came on, but stayed on the whole time I had the Mega ST turned on. It was my understanding that red LED would only come on when the higher baud rates were being accessed.

I figure that leaves only 2 things:

1. The RSVE unit is bad
2. I didn't have HSModem configured right

I'm still trying to puzzle some things out. Using the MODEM.CPX, right now, modem1 is grayed out. But its (my Mega ST) working just fine. If I use the SERIAL.CPX (from the STing author), its not grayed out. Note this is with the RSVE *removed*.

Thanks.

Sounds like the 6800 was tracking the time, because dedicated real-time
clock chips can live off small watch coin cells.

Anyone got a circuit of the keyboard to confirm this?

The ST does not have a clock, although several clock cartridges were
sold by third parties (I have one called "Eureka").

It is not difficult to find software that allows you to set the time at
bootup.

Great. It sounds like if I tweak the BIOS to read an RTC chip, that is as legitimate a mod as a clock cartridge. I'm not keen on the alternative of cloning the keyboard and fitting an RTC there - it would be very-compatible but not as convenient as using a PS/2 keyboard.

AFAIR, you do not need any special setup - the software works as-is, however, some baudrates are mapped to faster ones (IIRC that was 110, 134 and 150bps). So if you use your normal terminal program and set one of these rates, the MFP will really be operating at 38400bps etc..

Configuring HSModem should only be necessary to have the terminal software display the "correct" baudrate.

Hi Michael. Thanks for the reply.

Part of the problem is the BBS software I'm using. It only allows you to choose from 300 to 19200 baud speed.

How do you set that in HSModem?

It would have to be mapped from the 300-19200 range.

Preferably, I'd want HSModem to remap 3 speeds from the above range to:

38400
57600
115200

so I could pick easily from the BBS software's choices, to see what speed will work (reliable transfer with few or no CRC errors).

Thanks again.

Hi,

There was a 3rd party board which piggybacked the TOS roms with a clock. I have one in my 1040STE. I use a Enercell 3.6vdc battery that replaced the old battery.

Hi all,

```
Ok, the board is called a ST/ime featuring a DS1215 clock chip and
oscillator. Doesnt look too complicated.

LS

I purchased a Addonics ADAEC7726H SCSI IDE convertor.

It works like a charm connecting a nice and silent
ATA laptop HD to my TT030 as a external HD.

I hoped to be able to let it replace the 14 year old
Quantum LPS340 I use internally (could die any momemt).

First I simply swapped unit numbers, ATA --> 0, LPS --> 1
I booted from a floppy having HDDRIVER in the autofolder.

No HD's were detected by HDDRIVER.

Then I removed the internal LPS and terminated the Mboard.

No change.

I havnt yet tried the ATA on the internal connector
because I must first concoct a external terminator
on a 50 pin connector.

Does anyone have experience with the ADAEC7726H as internal
SCSI 0 on a TT?

Is it generally possible to have SCSI unit 0 externally?

I dont care if I cannot boot from it. Reliable new and
silent HD is most important.

I wrote a small program for the floppy autofolder
that executes the programs in C:\AUTO

When one is desparate, one is willing to try everything. :-)

I booted from a floppy with AHDI 6 in the autofolder
and everything was fine. All partitions were detected.
ATA as unit 0 on the external connector.
LPS as unit 1 on the internal connector.

Uwe, how can I provide you with enough information for explaining
this problem.

The convertor is totally driven by firmware.
We all know what to expect from software dont we? ;-)

This is most likely a termination or cable problem. HDDRIVER uses more bus signals than AHDI and it has happened several times in the past that users had problems like yours. It always turned out that something was wrong with the termination or cables (too long or a broken pin).
Usually in cases like this it is a good idea to connect only one device and get it recognized (using HDDRUTIL's ID check). As soon as one device works, connect the others.

It only stopped working when I changed the ID jumpers.
I didnt change anything in the cabling.

With excact the same physical connection it works if
the addonics which is externally connected is jumpered as unit 1
and the LPS340 jumpered as unit 0 internally.
So there is nothing wrong with termination or cabling.

Remember I started to tell that it worked perfect.

Then I simply move the jumper from the addonics to the LPS340
without even touching the cables. Effectively switching the
addonics to 0 and the LPS340 to 1.

Then HDDRIVER stops recognizing anything.

Oh, and I ALWAYS switch everything OFF before I do a physical
change.

This is really strange, but in this case I suggest you just keep the IDs
as they are and change the device order for HDDRIVER with HDDRUTIL, so
that the order of partitions is like you want it to be.

By the way, are you sure that you actually changed the ID for your LPS
drive? Remember that Quantum drives can be configured so that their ID
is exclusively selected by software, not by the jumpers. You should
check with HDDRUTIL whether the software ID option is enabled for your
Quantum drive. If it is enabled you should switch it off, so that you
can select the ID with the jumpers on the drive.

That is a good idee. I thought I good do that, but I must have
forgotten how. It is usefull anyway.
Must always keep the docs by hand

I also realized that I didnt reconfigure the driver on the floppy.
Should I have done that?

Once the driver is configured you must always reconfigure,
or use the vanilla driver from the original floppy.

Is that correct?

Thanks Uwe for your attention.

AHDI reported it as unit 1, which was as intended.
I'll have a look with HDRUTIL.

It depends on whether the default settings of the driver on the floppy
disk or the driver currently installed are the settings you need, just
like with any other software.

LS

Prepare for a long story!
But I thought it might be of interest to people suffering
aging HD's on a TT.

I found in a electronics shop a suitable flat cable
terminator needed to put the addonics in the inside
of my TT.

I now have the configuration I want, which is:
Internal Addonics/ATA at unit 0.
External ZIP100 at unit 6. (The ZIP can only be set to 5 or 6)
Because the TT rom wont boot from any HD younger than about 10 years
I boot HDDRIVER from a floppy.

HDDRIVER hangs.

I set the addonics to unit 1.

HDDRIVER hangs.

I start HDRUTIL from the floppy and do autoconfigure.

autoconfigure hangs.

I can as well put the addonics back to 0, which I do.

I boot AHDI from a floppy and lo and behold, the ATA HD
is detected, and my autofolder program execs the C autofolder
and my beloved desktop appears on my screen.

Unfortunately AHDI has the annoying property of wanting
consecutive unit numbers, so I cant use the ZIP.
I need the ZIP for daily backup.
Besides, I want to use HDDRIVER.

Having the full desktop, it is much easier to do more testing
with HDRUTIL/HDDRIVER.

I start HDRUTIL from C and do device check.
HDRUTIL says there is no HDX support, but device check and autoconfigure are available.

Device check now detects the ATA HD as unit 0 but strangely the ZIP at units 1 to/incl 5, the TT at 6 and a ZIP at 7. Not very convincing :-)

I looked at the back of the ZIP and it seemed that the switch for unit number was not quite in a extreme position.
I put the switch firmly in the 5 position. and restarted.

Device check now gives me:
0 ATA
5 ZIP
6 TT

Better, but still the TT at the wrong place.

Then I put the ZIP firmly back to 6.

Device check gives the same abundance of ZIP's as earlier.

So there is definately a weakness in the ZIP drive.

ZIP back to 5.
If the ZIP could be the cause of the trouble, I thought it might be good to do the whole test cycle again, with the ZIP at 5.

But it made no difference, HDDRIVER still hangs.

Because I could use HDDRIVER and HDRUTIL when I had started up using AHDI, I put AHDI before HDDRIVER on the floppy autofolder.

Which worked.

It starts with AHDI detecting unit 0 as ATA
then HDDRIVER is run and detects unit 0 as ATA, unit 5 as ZIP and still unit 6 as TT.

Now it was time to remove the ZIP completely.
I reconfigured the floppy HDDRIVER, and now the TT appeared at 7, as it should.

I tried to floppy boot again WITHOUT AHDI first, no ZIP connected.
HDDRIVER keeps hanging.

End of testing.

I put back the whole configuration as I want to use it:
Addonics as 0
ZIP as 5

boot floppy with AHDI & HDDRIVER.

Started up and now the TT was correctly set to unit 7.
I dont know how, but it certainly what I want. :-)

Now I can go back to normal computing again.
I think I will seal this TT confuguration into a solid block
of perspex.

Conclusion:
I certainly DONT think there is something wrong with HDDRIVER.

Both ZIP and Addonics have weaknesses.
The addonics firmware doesnt do the SCSI protocol entirely
well. The basic IO seems to be OK. I could copy ALL my data
to it without problems.
The ZIP disturbs the communication with the addonics when
set to 6 and when finding the TT unit number.

Uwe, you might want to know why or where HDDRIVER hangs?
You must have a version that logs debug info.

I am willing to run it for you.
It must write to A: and open/append/close for each line.

The TT and another device must never have the same device number. If the TT has ID 6 and the ZIP also has ID 6 it cannot work with drivers like HDDRIVER, which support SCSI features like initiator identification.

> Uwe, you might want to know why or where HDDRIVER hangs?
> You must have a version that logs debug info.

You can use SCSI_MON for logging, just download it from my web page.

Take a look at the MegaST schematics- it very similar to plain ST, with several small improvements- one of them being a RTC. It consists of the clock chip itself (a device by Ricoh) and of some additional components that contain an address decoder and handle reset and power-off situations.

TOS (at least 1.04 to 2.06) recognizes the presence of this device and sets the keyboard clock at each reset. So probably you do not have to tweak anything in the BIOS if you provide right data at the right addresses.

Has anyone got any in-depth technical information about how the TT/MSTE and their VME bus interact ? I can find *some* stuff on the web (eg: the 19/7/1991 Atari VME spec), but it's hardly comprehensive [grin]

Basically, if I want to create some VME hardware, I need to know things like:

- how it'll interact with the OS
    - It's supposed to be slave-only, so presumably can't initiate DMA...

- what the startup sequence is
    - card sends IRQ ?
    - OS queries address and expects response ?
    - When in the bootup-sequence all of this happens ?

... things like that :-)

I've tried sending email to Mario Becroft (of the Galaxy card fame),
and I've even tried emailing the creators of a Sinclair QL VME-bus
implementation, but no answers back as yet :-(

Anyone ?

Cheers,
Simon

Hello Tom Tom!

> Do you know by chance if the format of the drive is the same as the reg=
ular=20
> ST or if it is the same as the TT/Falcon?

The "format" of the ST-Book-Drive is a 2,5"-drive as used in=20
notebooks/laptops.

> Since the drive is IDE, can any drive be used in it or does it require =

> certain models?

If I remember corectly these machines had problems with drives bigger=20
1GB capacity, so if you find somewhere a 500MB-drive it should be=20
possible to install.

> What means will the drive need to be formatted and with what software i=
s=20
> recommended?

Is there a "format-software" (AHDI sp?) in ST-Books permanent RAM-Drive=20
(I don't remember...)
Otherwise the best chance is to take a FALCON (only other Atari-machine=20
with a 2,5"-drive"), put the "new" ST-Book-drive in it, format with the=20
software from the "language-disk" or third-party-software as "HDDriver", =

and put this drive then in the ST-Book.
Voil=E0 - Should work...

Best Regards, Werner

YES it is SLAVE (A24/D16) and you can see on the schematics !
On schematics you can see too how are routed the VME INT and that the SCU (System Control Unit) is managing the share between the INT from the mb and the INT from the VME slot. You have info on this VME atari 1991 documentation that is extracted from TT/X documentation you mean...
Have a look on my site web (museum area ?), there are some documents...

Have a look too on the CTLink Hardware Guide because I did a table will all existing VME atari card and their INT level used !
I send you now by email this CTLink doc.

Regards

Correct.

>   - what the startup sequence is
>   - card sends IRQ ?
>   - OS queries address and expects response ?
>   - When in the bootup-sequence all of this happens ?

There is no such mechanism - the OS basically ignores the VME card, you need
to start required drivers by some other means - from the auto folder, as a
NVDI driver, etc..

The slot in the MSTE/TT is slave-only, A24/D16, one (vectored) interrupt,
the bus timing is quite similar to a native 68000 bus. The card needs to
pick a free address range that does not collide with other devices in the
system - the available addresses are more limited in the MSTE.

```

Cheers Michael,

Actually that's pretty cool - I get to define how I want the card to
behave, and can develop with it in-place without having to have the
thing work immediately :-)

Thanks a lot :-)

Simon

G'day, Atari Falcon030, circa early to mid 90's.

There are a few Atari clones but no Falcon clones. They are the Hades,
Milan, Eagle and Medusa. These are TT clones (sorta) and run a modified
version of TOS. They sported anything from a 68030 to a 68060 cpu. None
avaliable new anymore.

Mark

As "real" Motorola 68K chips are not made any more, and are not available in significant numbers, its just not possible to produce real clones any more. Several folks have looked at using more modern chips but I don't they they are compatible enough. Just look at :-

http://www.kingx.com/kingx/medusa/thes.html

its not been updateed for ages...

Xnview does read Neochrome (and Degas and a thousand other formats), and
it is multi-platform: runs on PC, Mac, Linux and Nconvert (the
command-line version, is available on Atari, too!

Then there is the Atari Coldfire project that could bring something interesting. And we are in the Motorola area again.

I have been trying to connect my falcon and TT using Bnet. After Bnet is run I see the Bnet drive on both compters. When I click on the drive on the TT I can see the falcon folder but when I double click on the folder it says it is empty. The same thing happens on the falcon except when I dbl click on the TT folder, I get a message Cannot connect to drive.

The Falcon is running magic 5.11w/sting installed. The TT is running TOS 3.06 and sting.
Bnet Is run from the Magic start folder and on the TT it is installed as an .ACC. Both the TT and Falcon I connected with Daynaports to my router. Both TT and Falcon are able to access internet thru the router which is connected to a cable modem.

Has anyone had any success with Bnet. What is the rules for setting the Hosts.inf file? Do I need tabs or spaces between the parameters?

Thanks.
Claude Bourgoin

Hello,

Yes I use BNET to backup my STe. I have a Hades and use the MagicNet version of Bnet on the Hades and the STing version on the STe. It works fine. There is an ACC Bnet file that is used for the STing version. I just boot up my STe with the ACC file going and then boot up my Hades. Works fine for me. I do not run the Bnet program on my STe though, just the ACC file. Try running just the ACC file on your TT and see if the BNet drive on the Falcon has files in it. I could be wrong, but it has been a while since I used it since I do not put too many new files on my STe. I think you are correct about the HOSTS.inf files. You do not want to disrupt the spaces. Keep them the same.

Below are my HOSTS.INF files:

Hor the Hades:

```
#
# Example HOSTS.INF file. Names longer than 8 characters are truncated.
# If you have setup Ronald's MASQUE.STX use the same addresses.
#
# Use the line below to define BNeT drive for SingleTOS
#
#
192.168.1.202     STe        local   enabled
```

For the STe (Had some trouble getting the STe to display the Hades files)

```
#
# Example HOSTS.INF file. Names longer than 8 characters are truncated.
# If you have setup Ronald's MASQUE.STX use the same addresses.
#
# Use the line below to define BNeT drive for SingleTOS
#
bnet_drive=P
#
192.168.1.201     Hades        local   enabled
#1.1.2.2     MYFALCON     local   enabled
```

Gamer
I do use the Bnet.ACC on the TT and I copied the bnet.app to the location described in the Bnet.HYP.
My hosts.inf file for the TT is:

```
# Example HOSTS.INF file. Names longer than 8 characters are truncated.
# If you have setup Ronald's MASQUE.STX use the same addresses.
#
# Use the line below to define BNeT drive for SingleTOS
#
bnet_drive=P
#
192.168.25.120     MYFALCON        local   enabled
```

The route.tab for the TT is:

```
192.168.25.120    255.255.255.0    Ethernet0    192.168.25.1
0.0.0.0    0.0.0.0.    Ethernet0    192.168.25.1
```

The route.tab for the Falcon is:

```
192.168.25.130    255.255.255.0    Ethernet0    192.168.25.1
0.0.0.0    0.0.0.0.    Ethernet0    192.168.25.1
```

The 192.168.25.1 address is my router.

But when I open up the Falcon folder in the P drive on the TT it says it is empty.

All I have running for accessories on the TT is Cops, Bnet and ST-Guide. In the auto folder I have Sting.prg and Wdialog.prg.

Thanks for your help but still can't get Bnet to work.

Claude Bourgoin

Update on Bnet Problem.
I am able to see the falcon files on the TT, on the falcon I can see the TT Drives, but when I open up a drive iget an error message "Can't open a directory!
So it seems that I have half the problem solved.

Gamer, I am using Bnet as an accessory on the TT, but on the falcon I have Bnet.APP and Bnet.INF in C:\GEMSYS\MAGIC\START\. Bnet_XFS and Bnet_XFS.INF :\GEMSYS\MAGIC\XTENSION.

Any help is greatly appreciated

Claude Bourgoin

Anybody got any excess gear they want to part with?  I'm interested in
pretty much anything SGI/SUN/Unix/Amiga/Commodore/Atari/Server/Video
Game/Weird/Classic/Retro/ETC that you don't wan't in the Puget Sound
area that you'd prefer not to toss out.  Can't pay you but I'll give it
a good home and it won't end up on Ebay.

Well at least you are half way there. I am really in the same boat as you. I
an see the STe files on my Hades, but not the reverse. That is ok with me as I
onlu use Bnet to back up my STe files to a CD. It sounds like you need to
adjust something on the TT side. Are you using MagicNet on the TT or STing? I
am not really sure if you need the IP address for the router or not.

Okay guys, I need some help with something very specific. I'm trying
my best to speed up my BBS. I've got a Mega STe.

What I'd like to do is use HSmodem and modem 1 to achieve greater
speeds, like 38400, 57600 or even if possible, 115,200 over the serial
port.

The software I'm using only knows modem 1, min speed 300 and max speed 19200.

Can this be done? I've read the docs on DRVIN.PRG and MFP.PRG as well as SETTER TOS, but even with the English translations I'm not able to figure out exactly what to set.

Apparently remapping is possible, but I'm not sure how to achieve it.

In the remapping section of SETTER TOS, how do you enter your speeds?

Is it 300 38400? I tried that, only puts 300 in the first line and 38400 in the 2nd line.

Does the SERIAL.CPX have to have the speed set to the remapped speed as well? (so if 38400 is remapped to 300 you'd set the SERIAL.CPX to 300?)

In the BBS software, it offers min speed, max speed, and starting speed. Normally, I'd set these to 1200, 19200, and 1200... Would all 3 need to be set to 300?

Could everything be remapped to the faster modem 2 on the Mega STe?

Thanks.

PS I believe I've asked similiar questions before, so apoloagies - but I'm looking for more help.

Hello,

It has been a while since I used a dialup modem on my Hades. Now I use a cable modem through Comcast. You might try that to speed things up using the cartridge port on the Mega STe. I have a similar setup on my 1040STe. Back to the dialup modem. It really depends on your ISP on how fast you can go. I basically set the connection speed at 115,200 (using the Modem 2 port) and started on connecting at 57,600. Later my ISP upgraded itself and I started connecting at 76,800. As far as the Modem 1 port was concerned I usually connected at 19,200 and that was about it. What kind of modem do you have and what is it's speed max?

Hi Edward. Thanks for the reply. Well, its more complicated than that, I'm afraid. I'm using a Lantronix UDS10 serial to LAN converter, to allow my Mega ST (or STe) to run my BBS (visit my website for further details and pics). With DNS forwarding through the host I'm using, any Atarian from anywhere in the world can just telnet to my BBS by typing in "telnet bbs.darkforce.org". No modem, no long distance charges. However, since I'm still going through the Mega ST/STe's modem1 port, I'm limited to 19.2k. The software I'm using (BBS Express! ST) is no longer supported, so it can't be updated. Its locked into modem1 at 19.2k max speed.

So...I need to either:

Find a way to increase port speed on modem1 (which means an upgrade like the RSVE or buy a TT030).

Find a way to remap so that the software looks for modem1, but is actually accessing modem2 (on the Mega STe).

Thats basically what I'm trying to do.

Thanks.

Love the sound of that. Tell me, step by step, how to start.

Its written in Pascal, IIRC. I'll have to check on that though.

It is in OSS/ICD Pascal Version 2.05, from the archive I just checked.

Thanks.

Okay, I took the plunge and installed the RSVE kit that I had.

Short story - failed.

The question is, how much have I failed? Have I turned a less than 6 months old/brand new Mega ST motherboard into a piece of junk?... :(

I'm going to give a few details here in case somebody can point out something obvious I've missed/done wrong.

Following the docs on the printed out page that came with the kit, I did the following (there are only 4 wires to be hooked up):

black - ground - I soldered this to the pad directly underneath 1 leg of the power supply.

red - 5v VCC - I'm not expertly familiar with the Mega STs MB, so I wasn't sure where to go with this. So, reading some pinouts from the Mega STs owners manual, I soldered it to pin 1 of the cartridge port assembly, which is supposed to be 5v.

brown - soldered this to pin 16 of the 68901 MFP chip.

green - soldered to pin 7 (the docs say you can use 7 or 10) of the 68901 mfp chip.

Pin 16 of the MFP chip is to be disconnected from the rest. According to the docs, you can cut a trace on the MB if you can find it, or simply cut the leg itself. I simply heated the leg of pin 16 just enough to pull it up and out, before soldering the brown wire to it.

I used the Atari ST Internals book, the Mega ST owners manual, an article in ST Review on the RSVE, and the docs that came with the RSVE kit for my references.

For HSModem, I ran SETTER and configured MFP.PRG as best as I could understand it. I did the following:

rsve - yes - enabled the RSVE cookie
hisp - yes - same as above
repl - set the first remap to 300
repl - set the 2nd remap to 38400
repl - 3rd remap - u
repl - 4th remap - u
repl - 5th reamp - u
repl - 6th remap - u
dtr - yes - maintains TOS comp.
rbl - 512
tbl - 512
saved it

To TOS, the modem1 port is now "dead". I mean that the modem/serial CPX has modem1 greyed out like its not found. And of course, nothing will connect with the BBS in this state. I tried.

Well, thats about it. Anything stand out to anyone? I guess if no one here can help at this point, I'll just save up my money and send it to Alex Yu at ATY Computers and see if he can figure out how I screwed up (again). :(

Thank goodness I had just replaced the P/S in my Mega STe so it can keep DarkForce running while my Mega ST is down.

Thanks everyone.

Have you actually checked that the RSVE board is in fact receiving 5V,
and that it's the right way round?

I'd always check with a multimeter before committing to a job like this
where I wasn't sure...

Umm...right way round? There's a red wire (for the 5V) and a black wire
(for ground). I believe I've got those orientated correctly, if pin 1 on
the cartridge port is giving 5 volts...

> I'd always check with a multimeter before committing to a job like this
> where I wasn't sure...

I've got one somewhere - not sure how to use it? Any pointers for a newb?

Thanks.

No reason to doubt, but that word "believe" gets the nerves jangling...

So. Get your meter and switch it to a high DC volts range (that will help to protect it you accidentally get the leads the wrong way round). Most meters have a COMmon socket to which you connect the black lead, and two sockets for the red. You want the volts/ohms one rather than the current one.

Switch the supply of the equipment that you're testing on, and place the probes either side of what you're measuring. Watch the meter, and watch that you don't accidentally short circuit something with the probes! If the reading increases then you have it all connected the right way round, so you can readjust the meter's range switch to a suitable figure. 12-25V or so will do fine. Practice on a flashlight battery first if you're nervous!

In your case here, I would start by sticking the black probe on something I knew was negative (-ve side of a capacitor for example), and the red one onto your cartridge port pin 1. If there's no voltage here then there is a fuse supplying this which might have blown. If that's so, then rewire your RSVE to pick up its positive feed from the positive side of a cap.

A cap - as in capacitor, right?

Okay, I'll see if I can try all this today, given the time.

BTW, just to make sure - lets say that I had tapped into something that
gave 12V instead of 5V...can I assume it probably fried the chips in the
RSVE unit? (I had tried hooking this unit up years ago, but to be honest,
I don't remember what I tried to hook it up to).

Thanks for the walkthrough, much appreciated! :)

On Fri, 21 Jul 2006 10:52:54 +0000, Derryck Croker wrote:

Some progress, of a sort. Stripping everything out, down to the MB, with PS and floppy still connected, I can power up the Mega ST and the red LED on the RSVE unit does light up.

Which is odd, I think...because the docs say this:

"The LED lights up when one of the extended baud rates is selected."

Would an extended baud rate be selected from bootup, with no software running at all?

At least though, and correct me if I'm wrong, we can assume that the RSVE unit is getting power.

BTW, here is the instructions for the wires:

```
+5V RED WIRE  to VCC (5 V) on the main board
GND BLACK WIRE     to GND on the main board
TID BROWN WIRE     to pin 16 of the MFP
TUA GREEN WIRE     to pin 7 or pin 10 of the MFP
```

Also it says this:

"On the main board, pin 7, pin 10 and pin 16 are connected. The connection between pin 7 and pin 10 has to be preserved, the connection of those 2 pins to pin 16 must be cut. If you cannot find the corresponding connection on the main board, pin 16 may be cut close to the boards surface."

I simply unsoldered pin 16 and pulled the leg up out of the socket, then soldered the brown wire to it, which should be the same, right?

So if its getting power, and I've got the brown and green wires hooked up right, why does the serial/modem CPX show modem1 greyed out, so that it can't be selected, and it obviously isn't working?

Thanks.

Does anyone know of a PC utility that will allow me to convert Neochrome
pictures to another format (such as BMP or GIF)?

Thanks

That seems to be OK. You're happy with that soldered connection and
that there's no short-circuit?

I'm afraid that I don't really have any experience with the RSVE board,
so my observations are based only on tinkering experience, so about the
only other thing I'd suggest would be that you check that you have the
right HSModem components in your Auto folder, that they run in the
right order, and that they run before any other prog. that accesses the
serial port (for example STiNG etc).

You could also try reconnecting pin 16 to the MB and make sure that
still works (take off that brown wire, of course).

I had fun and games when I managed to break that pin off flush with the
chip when I was doing a similar mod quite a few years ago, so be very
careful!

Paint Shop Pro for the PC may still read this format.

Graphics Converter for the Mac still reads this format.

Either way you have to have the files on a PC formatted disk.

The program Smurf for the Atari does that also.

I'm working this weekend, but my next day off, I'm gonna go back and double/triple check everything again.

Well, from the docs, it looks like its supposed to be:

DRVIN.PRG
MFP.PRG

in that order, for the ST series. I've got STing - used it with the EtherNEC when I had it hooked up to this particular machine, but I removed it.

> You could also try reconnecting pin 16 to the MB and make sure that
> still works (take off that brown wire, of course).

Others have suggested this as well, so I might try that. The part that concerns me is that modem1 shows up greyed out in the CPX. Some people have commented that might mean I damaged the MFP chip and the port can't be found now. I hope not.

> I had fun and games when I managed to break that pin off flush with the
> chip when I was doing a similar mod quite a few years ago, so be very

I don't want to even start on my (unfortunate!) soldering experiences.

PS My soldering (mis)adventures are probably listed in the "what not to do" section of every self-help guide and book on soldering... :)

Just a quick update. Know a guy at work that actually has some kind of electronics certification. Got him to show me how to use the multimeter. To make it short, pin 1 on the cartridge port is 5V, so I'm okay there. Also, on the recommendation of someone else, I moved the ground off the pad underneath the leg of the P/S. Someone mentioned that might pick up some A/C noise, also, the guy at work said it looked like a "cold" joint.

Now, the green wire to pin 7 looks solid. Guy at work said it was bright and shiny, good connection.

Same for the brown wire to pin 16. I also took the motherboard up, examined the bottome to see if any tracks/traces had lifted when I heated pin 16. Looks fine.

Which leaves me with the worst possible problem. That I might have applied too much heat while removing pin 16's leg and damaging the MFP chip itself.

This of course, is assuming that the RSVE unit I have is in good working order.

Next step, I'll remove the brown wire from pin 16, attempt to re-attach
it, and see if the MFP chip is still working correctly.

There was a PD version of this hardware mod, you'll have to do some
digging around to find it - I thought it was on the Vezz Hardware site
but it seems to have been hacked :-(

I'll have to check back at AtariAge, but I believe "Krupkaj" had posted directions on how to assemble one yourself, but it did involve programming the GAL chip, IIRC. Still, he said it really wasn't that hard to do.

I also believe that System Solutions still has the RSVE listed for sale. I
might have to check up on that as well.

The one I had in mind didn't involve anything like that. I'm afraid

that the details have long since gone into the mists of time, but
someon in here must know about it. I believe it was published in one of
the UK Atari mags.

> I also believe that System Solutions still has the RSVE listed for sale. I

I'm not sure of the status of System Solutions/Atari Workshop. I'd try
contacting the former first.

Well, honestly like you - somewhere in the past I've seen several
different versions of "how to's" about this... ;)

I might have been thinking of the Atari Workshop. :)

Read this message until the end, and you will find out how the money flows in easy !!!!.
Follow the steps and it WILL work. Trust me !!!!!.

It's NOT illegal and it is NOT a scam !!!!!.

PROVEN ON OPRAH! Reported in the Wall Street Journal!!!!

The only thing you need is : - E-MAIL ACCOUNT
- PREMIER (FREE) or BUSINESS PAYPAL ACCOUNT
- $6 on this account (The only investment)
- 30 minutes of your time

There is no limit on how much money you can recieve, and you haven't got anything to lose with this Business program. I will explain how it works !!!!!.

Follow these 4 easy steps and it WILL work !!!!!.

STEP 1 : SIGN UP FOR A FREE PAYPAL ACCOUNT !!!!!.

Paypal is a free and safe way to pay and receive money on the Internet.
Creating a account is as easy as creating a MSN account.
Copy and paste the next line in your Internet browser and sign up.
HTTP://WWW.PAYPAL.COM

Be sure to sign up for a FREE Premier or Business account and not for a Personal account.
You cannot receive CREDITCARD payments with a Personal account and we can't have that. Do we !!!!!.

STEP 2 : SENT $6 TO YOUR PAYPAL ACCOUNT

This is your only investment to receive the money with ease.

With your Paypal account, send $1 to each e-mailadres listed below.
!!!!! IMPORTANT !!!!! Be sure to use this SUBJECT : *PLEASE PUT ME ON YOUR EMAIL LIST* when you send the money.

1) martine@pilote.net
2) dexxatol@netcourrier.com
3) armygirl8568@hotmail.com
4) comjii@starband.net
5) sinnek@bellsouth.net
6) nsi@nelasat.com

STEP 3 : PUT YOUR E-MAIL ADDRESS ON THE BOTTOM OF THE LIST

After you have send $1 to each e-mail address, put your e-mail address on the 6th place.
Remove e-mail address number 1, and move each e-mail address 1 step up the ladder.
!!!!! IMPORTANT !!!!! BE SURE THAT THE E-MAIL ADDRESS YOU USE IS THE SAME AS YOU USED TO SIGN UP AT PAYPAL.

Remember that this is LEGAL. You are creating a service : an e-mail servicelist.

STEP 4 : UPLOAD OR COPY THIS MESSAGE TO NEWSGROUPS, FORUMS ETC AND EMAIL IT TO ALL YOUR FRIENDS!

There are 32,000 newsgroups. Upload or copy this message to at least 200 newsgroups or forums etc, but .... remember that the more your upload the more people will see your message and the MORE MONEY WILL FLOW IN.

How to upload to newsgroups and forums? :

After you have followed step 1,2,3 and 4, save this message (and copy so you can use it again).
Use your Internet browser and Outlook Express or another newsreader and try to find FORUMS, NEWSGROUPS,

BULLETIN BOARDS, DISCUSSION GROUPS, CHAT SITES and ONLINE COMMUNITIES. Use GOOGLE or use a NEWSERVER.
Use every option to post this message. Download PostXpert to send 1 message to more NEWSGROUPS at the same time.

!!!!! REMEMBER !!!!! The more you post this message the more MONEY WILL FLOW IN.

Why does this Business program work so well !!!!!.

Lets asume that from the 200 (or more) messages that you have posted, only 5 people respond, you will have your $6 back that you have invested. Those 5 people will each send at least 200 messages with your e-mailadres on number 4. That's 6 x 6 x $1 = $36. The next 25 people will also send 200 messages with your adres on number 3. That's 36 x 6 x $1 = $216. The next 216 people also send 200 messages with your name on number 2. That's 216 x 6 x $1 = $1296!. Those 1296 people again also send 200 messages with your name on number 1. That will give us a total of 1296 x 6 x $1 = $7,776.

Now the last tier! 7776 x 6 x $1 = $46,656!!!!!!

This is only a EXAMPLE with 6 reactions. You WILL get MORE responses than that.

Remember that most newsservers will leave the posted messages on there servers for about 2 weeks. If you will post your message again, it WILL again start from the beginning. So you can repeat this over and over again.

Everyday MILLIONS of people are ONLINE and reading these messages, JUST LIKE YOU RIGHT NOW.
I also was sceptical in the beginning and have read a lot of these messages. I also thought that it was bullshit.
Until I thought : What the hell!, only $6. What's $6 and a couple of minutes of my time to solve my money problems.

!!!!! REMEMBER !!!!! Follow every step, and IT WILL WORK, TRUST ME. !!!!!

!!!!! BEST WISHES AND GOOD LUCK !!!!!

w)O>+;)<9UVS;F>qaGL<Uq#v`V6(F]- rM;$g+!4IIQ*827?H4

What I meant was why did they use 32.084988 and 8.010613 rather than 32 and 8 MHz exactly. The latter are easy values to find and buy.

0.084988 is 1/11.766367... or roughly 3/35.2991...

I can't see a relation between any of the crystal frequencies and PAL and NTSC colour carriers, which one might do to reduce colour dot crawl for instance.

It isn't needed to correct PAL frame timing, as this uses multiples of 64 us.

NTSC is slightly slower than 60 Hz field rate, so one would expect a crystal slower than 32 MHz.

Nope. Never could get it to work. I mean, I'm absolutely sure that I had the connections right:

+5v to red
ground
2 wires to MFP chip

and while at first I (and others) thought I might have damaged my MFP chip, after reconnecting it, it works, so either the RSVE unit itself is bad...or?

Dunno.

Wish, in all of the Atari universe, I could have found just -1- other person that actually had an RSVE mod and used it successfully. :)

don't forget the shifter is a cpu in its own right, it has to crunch
millions of bits of information 60times a second to output the video. You
might want to check out the diagrams for the ST to get a idea on whats going
on exactly.

I'm a professional electronic engineer implementing the Atari STE logic (as much as possible) in a single FPGA. I can easily get a 32 MHz crystal and divide it down for 8 MHz etc.

I have the ST circuit diagrams and can understand them well.

What I don't understand is why Atari chose crystal frequencies that are slightly off integer multiples of 1 MHz.

If I have to run several different clock domains this makes implementation harder.

I did (long ago). However, I build everything from scratch using the
documentation provided by Harun Scheutzow. Provided the PCB and programmed
GAL are OK, there is not much that can go wrong.

>slightly off integer multiples of 1 MHz.

This should work as long as you don't need PAL or NTSC TV output. If you look at the schematics (I remember the ST/MST version), you can see that at least in the PAL version, the 32.xxxMHz clock oscillator is part of a discrete PLL that is sync'd to the 4.433MHz PAL burst - IIRC, the HSYNC signal (which is scaled down from the 32.xxxMHz main clock) is phase-locked to the 4.433MHz clock. AFAIR, this is required to produce PAL-compliant FBAS signals. I am not sure about NTSC, though.

About the FDC: 8.000MHz would have been the correct clock for the FDC, but the slightly higher clock is still close enough to produce floppy disks that are exchangeable with other systems. Using the correct 8.000MHz, you can get a few bytes more per track, which makes it a bit easier to get 11 sectors/track with normal sector gaps.

IMHO the problem with getting 11 tracks is low-power drives. They have enough power to accelerate the disk fast enough to read 11 tracks, but not fast enough to write 11 tracks. I had a drive that would do both, and the bearings were replaced with $75 each aircraft quality bearings, and it died due to stupidity, either mine or of the people who made a circuit to make it write a HD disk. If anyone has a really old disk drive, which still works, I will pay an unreasonable price for it. I had one that was as quiet as a mouse, and would read and write 11 or 22 tracks.

Otherwise, I am a quite old engineer, and know that the cheapest way to accomplish a goal is the one that gets used.

Jim

Thanks for the info.

I suspected something like that, I just could not work out the ratio.
32.084988/4.43361775 = 7.236751071

> I am not sure about NTSC, though.

That has a 32.215905 MHz crystal.
Which is nearly 14.31818.. MHz * 9/4
Using precise values, 4 times NTSC times 9/4 is 32.21590909... MHz
So it seems that Atari used the rounded off value of 14.31818 MHz.
Bad boys!

Oh well, I think I shall use NTSC based values for both PAL and NTSC versions.
Most modern TVs that use PAL also have SCART (PERITEL) sockets for analogue RGB input, while NTSC TVs do not. I see the circuit just uses a 32.21590909... MHz oscillator block for the Peritel-output version.

The Amiga sensibly used a single 14.31818.. MHz crystal and halved it for the CPU clock.

Good news. I think a simple 32 MHz master crystal is the least fuss, and if anyone really needs colour carrier signals they can go find their own strange crystals or use a programmable frequency generator chip.

I may get sort for saying this, though isn't 8.010613 just simply wrote as 8mhz ? Some testing I did a while ago, I ran the ST's MMU on my own 16mhz clock and could vary the speed of the entire ST, running on 20mhz the screen went out of sync and the sound system went faster. IMHO I really do not think you need to worry about it that much. As long as your video system is generating the correct video timings then I really do not see a problem ? The worst that could happen is your scanline finishes a couple of pixels early, or the sound may play a couple of hz out of spec, but im sure over the millions of ST's produced that all this would vary with crystal specs anyway.

If you *really* want to make sure, just get a normal ST, put in an exact crystal and see what happens. I bet if you tested the timings of 100 ST's that none of the ST's would keep exact time anyway.

Isn't it normal to have it a little over anyway ? by the time its gone though a few buffers and dividers it would loose a bit of the "extra speed" anyway.... I could by wrong though IMO I really do not think its going to matter, just stick to the easy numbers....

Chris

No. If you ask for an 8 MHz crystal, you will get one.

These are a standard item.

If someone goes to the trouble of writing 8.010613 on the circuit diagram, they would have had a good reason because a non-common crystal will not be as cheap.

> Some testing I did a while ago, I ran the ST's MMU on my own 16 MHz clock

Well, you do have to worry because if the video timing is not synchronised with the colour clock you will get dot crawl on TVs using composite or S-video input.

> I'm sure over the millions of ST's produced that all this would vary with
> crystal specs anyway.

That's not the point. The frequencies have to be synchronised within the machine.
It doesn't matter if they are a bit different between machines.
The colour carrier oscillator has a trimmer cap so that the colour carrier frequency can be tweaked to meet the NTSC accuracy.

> I bet if you tested the timings of 100 ST's that none of the ST's would
> keep exact time anyway.

True, but not relevant due to previous point.

> Isn't it normal to have it a little over anyway ?

No.

> by the time its gone though a few buffers and dividers it would loose a
> bit of the "extra speed" anyway....

No, buffer delays do not change the frequency of the signals passing through them.

> I could by wrong though IMO I really do not think its going to matter,
> just stick to the easy numbers....

I shall use 32 MHz exactly and by-pass colour-carrier modulation completely to make the problems void.

I hae not done the calculations, but since the HSYNC is sync'd to the
4.433MHz PAL burst, you can expcet some rather odd numbers.

>> I am not sure about NTSC, though.
>
>That has a 32.215905 MHz crystal.

And AFAIR, they used a fixed oscillator and no PLL for NTSC - however, I do
not know enough video format details to understand *why* this worked.

>Which is nearly 14.31818.. MHz * 9/4
>Using precise values, 4 times NTSC times 9/4 is 32.21590909... MHz
>So it seems that Atari used the rounded off value of 14.31818 MHz.

Or maybe it is correct that way - some video formats employ
near-but-not-completely integer multiples for various reasons - see for
example the section n why the vertical frequency is now 59.94005Hz in
http://en.wikipedia.org/wiki/NTSC

>Oh well, I think I shall use NTSC based values for both PAL and NTSC
>versions.
>Most modern TVs that use PAL also have SCART (PERITEL) sockets for analogue

>RGB input, while NTSC TVs do not. I see the circuit just uses a

That should work. These odd frequencies are only for FBAS, when using RGB output, 32MHz should work fine.

>The Amiga sensibly used a single 14.31818.. MHz crystal and halved it for
>the CPU clock.

Which is probably not enough for PAL: you then need to sync the 4.433MHz color burst to the HSYNC - the Atari method makes sense, too.

Have to disagree there. Temperature, over or under voltage, variations in
crystal composition, ancillary components. 8Mhz does not mean 8Mhz. Also
the higher the frequency, the more unstable it is. Multiple harmonics there
too.

>
> If someone goes to the trouble of writing 8.010613 on the circuit diagram,

Maybe the 8.010613 was a bodged batch of a few million crystals that were
going cheap at the time. We've seen numerous examples of this, particularly
with electronics through the 1980's. I think it was Sinclair that bought a
few million dud chips on the cheap.

Sorry to say this OP, but if you know so much about the subject and are so
worldly clever and infinite, then why on earth are you on here asking these
questions to us mere mortals.

Apologies for not meeting your expectations, and if you don't like the
replies you're getting then what on earth ever possessed you to post on
Usenet in the first place?

Maybe post these questions on the sci.electronics groups and take the same approach, for on here we're quite tame.

As someone who has changed crystal frequencies a lot, by rubbing them with a number 2 pencil lead, or cleaning them with an abrasive cleaner, I do not assume that more than four digits really mean anything. There are many reasons for production tolerances, and being on the low side can be fatal for an application, just as being on the high side can be fatal for others.

And, the operating frequency does vary with frequency, and that characteristic is not on my copy of circuit drawings. If one had the normal decrease with increasing temperature, one would spec on the high side.

Does anybody remember Workman Electronics? They bought transistor rejects from TI, mostly, which did not meet gain vs frequency requirements, but would work in many applications? The sorted them by gain at a suitably low frequency into three piles, and sold them.

This should be good for another thread or two.

Jim

: > to 16 MHz for the input of the MMU, which then chucks out 8 MHz for the
: > CPU and 4 MHz for the sound system.

: What I meant was why did they use 32.084988 and 8.010613 rather than 32 and
: 8 MHz exactly. The latter are easy values to find and buy.

: 0.084988 is 1/11.766367... or roughly 3/35.2991...

: I can't see a relation between any of the crystal frequencies and PAL and
: NTSC colour carriers, which one might do to reduce colour dot crawl for
: instance.

: It isn't needed to correct PAL frame timing, as this uses multiples of 64
: us.

: NTSC is slightly slower than 60 Hz field rate, so one would expect a crystal
: slower than 32 MHz.

As for me the best solution is to ask dude from you bought this falcon.
But of course I remember that Phantom Accelerator needs little programm
which activate ACCELERATOR.

Sounds like a Powerup or Powerup 2 module. If so, the only thing you
need to use it is a program to switch one of the ACIA ouputs on. I have
it and can give it, but not until I get my falcon back in a week or so.

eBay it, and be prepared to offer it overseas, otherwise you'll never sell
it on here. I've sold heaps of antique computer stuff on there, sometimes
getting surprising amounts of money.

Hello everyone,

I am in dire need of help. I have 200 megs of important data files on my Mega4 ST that need to be transferred over to my PC (Windows using 98 and XP Professional). My drive is a SCSI Maxtor 213 meg and my adapter is the ICD "The Link 2" interface. I'm running TOS 1.4 with Neodesk and Warp 9. I tried term programs from ST to PC but 19200 is way to slow. Tried parcp and couldn't get it working. I have ARnyM but I don't know how to make it read my SCSI drive. I have 7 partitions. 6 of them about 30 gigs each and the main partition is much smaller. I've plugged the SCSI drive directly to my PC bypassing the ICD adapter and used Gemxplore but could only read the 1st partition. I'm not farmiliar with Linux either.

Could somebody please help me with this.

Thank you very much for your time and help.

RJ

/////////////////////////////////////////////////////////////////////////////
///

here is my suggestion , it works for pc's.
take a part the hard drive for the st until
 you've exposed the terminal connector at the back ..
now open your pc computer up and apend it to the
scsi whatever cable on its "drive belt"
now power down pc and upon booting up use auto detect to automatically
configure the pcs sectors and track reading for the newly installed drive.

i really don't know if this will work because of the scsi cable , are atari
seagates or nec's exchangable with pc hard drives?

i just might try...ok ...gonna go now

charles

Does anyone have, or know where I can find, pin info on the MFP
(multi-function-peripheral) chip?

I tried googling but found nothing helpful...

Thanks!

     Hi, Ronald!

RJH> Does anyone have, or know where I can find, pin info on the MFP
RJH> (multi-function-peripheral) chip?

Try this one:

     <ftp://ftp.cs.tu-berlin.de/pub/atari/Doc/hardwar2.zip>

It's in german, but the signal names of the pinout are "universal" ;-)

Or try this one:

     <http://www.datasheetarchive.com/search.php?
q=mc68901&sType=part&ExactDS=Starts>

Here you'll probably find all the information you need.

     Regards,

          Alexander

I have one just XTRAM deluxe 4 meg upgrade card just sitting in a box in storage for a 520 ST. This does not need any soldering!

It worked the last time I used it last year! and it was always stable as a rock. I'd trade you something for it I guess.

I bought an iMac and maybe I will sell my Falcon that I used as
MIDI/audio recorder in the last years. It is in it's original case with
little modifications (external keyboard) and equipped with a Centurbo2,
14MB RAM, two SCSI drives in an external case (Quantum 540MB, IBM 1GB),
FDI, FA-8, external german keyboard, two mice and an Marconi RB2
trackball. 17" Gericom monitor. Software: OS of course, CT2 software,
latest and final version of Cubase Audio Falcon with dongle and manual
and HDDriver. The system is in a good condition and everything works
like it should. Anyone who wants to make an offer is welcome (karsten
dot gorkow at gmx dot de). The system is located in Reutlingen,
Germany.

- Karsten

Mate, your in trouble! lol

Take some advice from an old hack, forget the direct interface option, you WONT read the disk on an IBM, the atari uses a completely different method of formatting and partioning the disk, and as far as I'm aware there are no programs like "Trans Mac" for Atari formatted drives to be read by the P eice of C rap...   (please, anyone correct me if I'm wrong)

Simplest way is make / buy a null modem cable and set your terminal up to run at 56k, I'm sure there was a software upgrade to boost the ST's old RS232 port up to speed..

I know this is painfully slow by today's standards, but it's your only solution and a reminder as to how much crap we old farts had to put up with!

Unless....... Do you have access to an old Mac?? there was a program that would let you read Atari formatted disks connected to the crapple.. From there use Trans Mac software on the IBM to read the Mac disk over an Ethernet link or even connect the Apple disk directly as suggested by Charles in the previous post..   This is a LOT quicker.... in theory.
I reckon buy the time you've found all the bits connected it up, installed the software, re-installed the software, kicked it punched it, reassembled it again and got your first file across, the old null modem method would have had you sitting down the pub WEEKS earlier.... OK it's as slow as a wet week, but hey, just let the barstard chug along for a coupla days and all's done without one kick or punch thrown in anger.. :)

My two bob's worth anyway..

Cheers and good luck
Johnny

Looking for updated scsi software to format my drives.
I have an older version of Icd and if I remember right there

was another company that was better.

So any info on this would be a big help.
Thanks.....

Sure, you use STing, with the EtherNEC stuff for it. I can't recall the
URLs right off the top of my head (I'm at my Linux box), but you should
be able to google search for it.

HTHs. :-)

I'm using a JAZ drive for this purpose. The JAZ drive works with HDDriver and I installed a SCSI adaptor in my PC and attached another JAZ drive to it (you can get around with only one!) . Nowadays these devices are not that expensive on ebay.

I agree. HDDrive is the best for Atari computers.

Hi,

Has anybody here succesfully built the CF adapter for the Portfolio?
Wich documentation did you use? How difficult was it?

Thanks,
Jozsi

I have a Falcon with a 2.5" IDE disk. The disk is dying, and I want to move
data to a new disk. Is it possible to read the disk from a PC? I want to set
up a new disk and move data to the new one.

Yes its possible, here's two ways...

1=2E Connect a new 2.5" drive to the old one in the falcon using a two connector cable, and use the falcon to partition the new drive and copy your stuff across.

2=2E Put a 2.5" adapter in the PC, plug the disk into it and copy all your stuff off into a folder on the PC. If you have DOS compatible partitions on your Falcon HD, you can use windows, otherwise you willl have to use a linux distro to read the gem partitions. Someone recently had a similar problem, see this thread here: http://tinyurl.com/hzl4s

Either way you will need a cable or an adapter if you dont already have.

Hope this helps.=20
Coda.
